ISTSS Exhibit and Support Opportunities

We invite commercial and government agencies and nonprofit organizations to participate in the ISTSS Annual Meeting as exhibitors and supporters. Gain valuable exposure for your products and services and bring new ideas and tools to the attendees of the meeting. We are now accepting applications for the 35th Annual Meeting.

**Exhibitors:** Contact new prospects, gather leads, introduce your presence in the market and show your appreciation for your existing customers by exhibiting at the ISTSS Annual Meeting.

**Supporters:** Show your support for quality educational content at the ISTSS Annual Meeting or online continuing education program by providing sponsorship to ISTSS.

For more information, contact Amy Metzgar at +1-847-686-2290 or email ametzgar@istss.org.

Welcome to the 34th Annual meeting of the International Society for Traumatic Stress Studies. The theme of the meeting is “Promoting Societal Change: Integrating Traumatic Stress Research, Practice and Policy for Vulnerable Populations.”

The field of traumatic stress studies developed to address multiple facets of societal need and inequality, and quickly expanded to generate a vast amount of knowledge, with thousands of peer-reviewed publications spanning psychobiology and biomarkers, developmental manifestations, diverse psychiatric impacts, risk factors, health disparities, types of trauma, various treatments and diverse populations. Increasing dissemination and knowledge transfer in the field of traumatic stress is helping to reduce the burden of trauma globally. However, more work remains ahead to fully integrate science, practice and policy to improve societal outcomes, especially among at-risk and marginalized groups. The meeting will explore how we best capitalize on methodological pluralism to represent the needs and experiences of individuals and communities whose voices may less frequently come to the fore. Specific attention will be given to bidirectional knowledge transfer between the field and its constituents, with an eye towards improving equitable access to traumatic stress resources.

This last year has brought forth public awareness of the ways in which trauma is simultaneously commonplace and disastrous, and that trauma is woven throughout societal structures. It is particularly fitting that we are currently in Washington, DC. It is especially timely to discuss promoting societal change using knowledge from the traumatic stress field. While we can always count on ISTSS membership to attend to vulnerable and marginalized groups, the abstracts we reviewed this year were particularly thoughtful in engaging this topic, which you’ll see reflected in the submitted program: we see representation from around the world, and across social strata, in work that thoughtfully integrates race, religion, class, gender, and inequity as it works towards solutions for trauma at local, national, and global scales.

Consistent with our theme, the invited program includes the following topics: using trauma research to improve education, (Marleen Wong, PhD); an examination of mental health priorities among refugees, (Peter Ventevogel, MD); using technology to eradicate sexual assault, (Adele Jones, PhD); working with law enforcement to improve treatment of survivors, (Rebecca Campbell, PhD); pivotal accomplishments in the careers of senior ISTSS members, (Closing Panel: Our Work can Change the World: People, Policy and Pivotal Moments); and a special panel on creating mental health systems in the midst and aftermath of sociopolitical violence, (A Global Perspective on the Trauma of Hate-Based Violence). We have incorporated into the program researchers, clinicians and advocates who have impacted policy, alongside decision makers who have put our data and knowledge to work. We also are excited for our opening event, a performance of *Cry Havoc* by Stephan Wolfert, an off-Broadway one-man performance that unpacks the intersection of childhood trauma, military trauma, substance use, and gender.

In selecting our invited program and submissions, we have strived to create an inclusive, impactful program which is scientifically rigorous, clinically innovative, and that demonstrates the capacity of our members to change the world. We are delighted that you’ve joined us.

Welcome to Washington, DC!

Internship, Post Doc & Graduate Programs Networking Fair

Finding an internship or postdoctoral fellowship that features trauma-specific training can be difficult. In an attempt to ease this burden, the Student Section of ISTSS offers this session to provide an opportunity for students to talk with representatives of various internship and/or postdoctoral fellowship programs who offer rotations or specializations in the clinical and/or research aspects of working with trauma. The training programs have the opportunity to recruit potential interns and postdoctoral fellows, while students have the opportunity to locate these programs, meet representatives, and ask any questions they have about the experiences offered and the application process.

This networking event is coordinated by Matthew Luciano, Student Section Chair, and Chelsea Cogan & Anushka Patel, Student Section Vice Chairs.

*If there are sites you would like to see here in the future, please contact the Student Section leadership.

Educational Need

The ISTSS Annual Meeting provides a forum for sharing research, clinical strategies, public policy concerns and theoretical formulations on trauma. It is an international assembly of professionals and students representing an array of disciplines including psychiatrists, psychologists, social workers, nurses, counselors, researchers, administrators, victim advocates, journalists, clergy and others with an interest in the study and treatment of traumatic stress. Speakers are strongly requested to avoid unnecessary jargon and to make their work and its implication to the traumatic stress field as accessible as possible to those who do not share their particular perspective and type of scientific approach. This is designed to facilitate increased understanding of what different types of researchers (e.g., basic scientists, clinical researchers) focusing on different types of traumatic stressors (e.g., child maltreatment, disasters, terrorism, war) using different research methods and perspectives (e.g., epidemiology, genetics, psychosocial, psychobiological) have found as well as what the implications of their work are for the traumatic stress field. Our aspirational goal is to establish a jargon-free zone in which experts maximize communication of their work, findings and implications in a way that facilitates understanding and cross-fertilization among researchers, clinicians and policy makers from other perspectives.

Learning Objectives

Meeting participants will be able to:

1. Using patient- and community-centered approaches, tabulate and summarize needs and challenges facing diverse groups of trauma-impacted communities.

2. Connect ways in which exposure and response to traumatic stress unfold across societal contexts and structures.

3. Strategize for bidirectional knowledge transfer between professionals in the traumatic stress field, trauma-impacted communities, and milieus such as policy and law.

Satisfactory completion

Participants must complete an evaluation form to receive a certificate of completion. Your chosen sessions must be attended in their entirety. Partial credit of individual sessions is not available.

NOTE: If you are seeking continuing education credit for a specialty not listed below, it is your responsibility to contact your licensing/certification board to determine course eligibility for your licensing/certification requirement.

Stephan Wolfert, MFA
Decruit, Brooklyn, New York, USA

Cry Havoc, a one-person play by a military veteran, seamlessly interweaves Shakespeare’s most famous speeches with personal experience to help us understand the national crises we face when we fail in reintegrating our veterans. More than 23 million men and women have been wired for war, but never unwired from war.

US Army, ’86-’93, Medic & Infantry Officer. Stephan left a career in the military for a life in the theatre after seeing Shakespeare’s Richard III. He received his Master of Fine Arts degree from Trinity Repertory Conservatory in Providence, Rhode Island. He was a cast member in the long running hit Sense and Sensibility produced by Bedlam in New York City. He has also appeared in Bedlam’s acclaimed production of Saint Joan. On Broadway, Stephan created and directed the military segments for Twyla Tharp and Billy Joel’s Tony-Award winning production Movin’ Out.

As an artistic leader, Stephan co-created the largest touring Shakespeare company in New England, directed and taught acting Shakespeare at Cornell University and at Antelope Valley College.

Stephan is currently a company member and the Head of Outreach for Bedlam in NYC. He is also the creator of DE-CRUIT: a program to reintegrate military Veterans using classical actor training. Combining his own personal story of leaving the army and pursuing a career in the arts with Shakespeare’s writings on war, he created the solo piece Cry Havoc! which he has performed around the country. Bedlam is currently producing a month long run at the New Ohio Theatre in NYC. It won a Berkshire Theatre Award for Outstanding Production of a Play for its Shakespeare & Co. production, with Stephan and director Eric Tucker receiving awards for Outstanding Performance by a Male Actor and Outstanding Direction of a Play, respectively. Frequently combined with public events for veterans, other performances of Cry Havoc have occurred at the Access Theater, Brooklyn Historical Society and Columbia University in NYC, Fourth Wall Theater, Syracuse University, Friends of the Semel Institute in LA and Shakespeare Festival St. Louis and many others.

The organizations he runs and the performances of the solo show combine to share his passion for the idea that while we are very good at recruiting people into the military, we are far less skilled at de-cruiting them back into civilian life. Don Aucoin of the Boston Globe has said “Stephan Wolfert commits himself body and soul to that mission in Cry Havoc, and the result is riveting.”

Why Social Factors Matter for Coping with Trauma

Primary Keyword: Social Issues - Public Policy
Secondary Keyword: Prevention/Early Intervention; Social Issues - Public Policy

Richard Bryant, PhD
University of New South Wales, Sydney, New South Wales, Australia

People typically experience trauma in social contexts. We are beginning to be more aware of how social factors impact how we experience trauma, how trauma influences our social behavior, and how we manage its effects. This overview will present experimental data on how social attachments affect core mechanisms underpinning trauma response. It will also present naturalistic data on the relationship between traumatic experiences and attachment security. The discussion will also address the role of attachments using social network analysis to understand how entire communities interact after trauma. This knowledge will be discussed in terms of the potential for the traumatic stress field to place greater emphasis on social factors in preventing and treating PTSD.

Professor Bryant is a Scientia Professor of Psychology at the University of New South Wales, and is Director of the Traumatic Stress Clinic. His work has focused on the nature, course and treatment of traumatic stress and grief. His Traumatic Stress Clinic has conducted many studies using neural, cognitive, emotional and behavioral paradigms. He has also conducted many treatment trials for acute stress disorder, PTSD and prolonged grief. Professor Bryant has produced more than 520 journals, 62 chapters and 5 books. He served on both the DSM-5 and ICD-11 work groups for traumatic stress diagnostic criteria. Professor Bryant is a past ISTSS Board Member.

Marlene Wong, PhD
University of Southern California, Los Angeles, California, USA

In the past 20 years, researchers, intervention developers and clinicians have established the scientific foundations of the impact of violence on children’s behavior, academic achievement and overall development. After the tragedy in Parkland, new school and community policies, class action lawsuits and a review of current school safety practices are needed to apply that science to restorative justice, trauma informed schools and social action.

Marleen Wong, PhD, is Senior Vice Dean at the Suzanne Dworak Peck School of Social Work at the University of Southern California. She holds the Stein/Goldberg Sachs Endowed Professorship of Mental. She also serves as Director of Field Education and Executive Director of the USC Telehealth Clinic. Formerly the Director of Mental Health, Crisis and Threat Assessment Teams and Suicide Prevention Programs at the Los Angeles Unified School District, she has been engaged in a 20-year research partnership with RAND Health and the UCLA Partnered Health Research Center. Identified as one of the “pre-eminent experts in school crisis and disaster recovery” by the White House and the “architect of school-safety programs” by the Wall Street Journal, she has developed school-based crisis intervention and disaster response and recovery training in the U.S. and abroad.

Mental Health of Refugees: Global Challenges and Opportunities

Presentation Level: Introductory

Peter Ventevogel, MD
United Nations High Commissioner for Refugees, Geneva, Switzerland

Almost one percent of the world population is forcibly displaced, among whom are 22.5 million refugees. Most of them live in low-income countries with limited resources for mental health care. This lecture will describe current issues around refugee mental health and psychosocial support (MHPSS), including recent developments in research and conceptual models. The massive needs and lack of resources prompt the use of a multilayered mental health approach that goes far beyond specialized clinical interventions. Within global refugee mental health, three important emerging practices can be distinguished: 1) community-based interventions that foster self-help and strengthen social connectedness, 2) scalable psychological interventions (brief psychotherapies) that can be delivered by trained and well supervised non-specialists, and 3) integration of mental health into general health care in refugee settings. These types of interventions will be briefly and critically discussed and illustrated with practice examples.

Pieter Ventevogel, MD, PhD, is a psychiatrist and a medical anthropologist. Since 2013 he has worked with UNHCR, the refugee agency of the United Nations as their Senior Mental Health Officer based in Geneva. He provides technical support to refugee operations worldwide with frequent field missions, and is involved in policy development and capacity building around mental health and psychosocial support in refugee settings.

From 2008-2013 he was the editor-in-chief of Intervention, Journal for Mental Health and Psychosocial Support in Conflict Affected Areas, published by the War Trauma Foundation. He worked with another Dutch NGO, HealthNet TPO, in mental health projects in Afghanistan (2002 – 2005) and Burundi (2005-2008) and as their Technical Advisor Mental Health in the head office in Amsterdam (2008-2011). In 2011 and 2012 he also worked as psychiatrist with Arq Foundation, the national trauma expert centre in the Netherlands.

Pieter also regularly did consultancies for the World Health Organization in Egypt, Jordan, Libya, Pakistan, Sudan and Syria. He has been course director of several academic short courses such as the course Culture, Psychology & Psychiatry (Amsterdam Masters of Medical Anthropology), the Practice Oriented Course Mental Health & Psychosocial Support in Post Conflict Setting (HealthNet TPO, the Netherlands) and the annual course Mental Health in Complex Emergencies (Fordham University New York). In October 2016, he defended his doctoral dissertation Borderlands of mental health: Explorations in medical anthropology, psychiatric epidemiology and health systems research in Afghanistan and Burundi.

Traumatic stress professionals contribute to significant advancements and changes in policy, practice, and societal well-being around the world. This plenary panel will highlight the groundbreaking work of four global ISTSS traumatic stress leaders who have affected significant societal change in areas including terrorism/disaster response and recovery, post-apartheid reconciliation, services and supports for veterans and their families, and interventions and treatments for children exposed to domestic violence. Panelists will reflect on their pivotal successes in the field, discuss recommendations for successful collaboration, and provide recommendations for future directions for traumatic stress engagement and leadership. Time will also be allotted for the audience to pose questions to members of the panel.

‘Culturally Intelligent Community Based Practice’ An Integrated Systems Approach for Working with Juvenile Sex Offenders: Research and Perspectives from the Caribbean

Adele Jones, PhD
The None in Three: An International Centre for the Development, Application, Research and Evaluation of Prosocial Computer Games for the Prevention of Gender-based Violence; University of Huddersfield, Manchester, United Kingdom

This presentation will draw on original research conducted by the speaker:

i) UNICEF-commissioned study of perceptions, attitudes and opinions on child sexual abuse in six Caribbean countries

ii) a survey of children’s exposure to violence in Barbados and Grenada (funded by the European Union)

This presentation will have three parts: Part I will deconstruct narratives of child sexual abuse in order to understand the multilayered complexities involved in its manifestations in a particular socio-cultural context, Part II will examine the implications of the victimization of boys in relation to the development of psychopathic traits and the normalization of violence and Part III will use interactive methods to explore an integrated community-based systems approach for working with juvenile sex offenders.

Participants will be invited to engage directly with the situations which are described, with a view to understanding the multifactorial influences that create potentialities for offending behaviors. Taking a Whole of Society approach, the intersections between the psychosexual self, the disowned “other” and the cultural systems within which sexual aggression is nurtured and privileged are examined. While the research on which this presentation is based was conducted in the Caribbean, participants will be able to apply key principles and practice methods to their own local contexts.

Adele Jones is Professor of Social Work at the University of Huddersfield, UK and Director of the None in Three Research Centre. Previously the Director of the Centre for Applied Childhood Studies, Professor Jones specialises in international children’s rights and the prevention of violence against women and children. She is the author of numerous publications on topics as varied as child abuse, adoption, residential care, migration, child refugees, gender inequality, and HIV-AIDS and has directed research in more than 16 countries. Professor Jones has initiated/managed more than 26 externally funded research projects including the Sondai Project on HIV-AIDS in Trinidad and Tobago; the COPING Project, a EU pan-European study of the impact on children of parental imprisonment; a UNICEF commissioned study of child sexual abuse in six Eastern Caribbean countries; and a UNICEF-commissioned study into violence against children in Tanzania. She recently concluded a two-year EU-funded Human Rights project (400,000 Eur) on the use of prosocial games in tackling domestic violence in the Caribbean. Professor Jones is Founder and Director of the None in Three Research Centre, which builds on the EU project and is using frontier technologies, culturally sensitive strategies and advanced research methods for tackling gender-based violence in the UK, Jamaica, China, Uganda and India.

Rebecca Campbell, PhD
Michigan State University, East Lansing, Michigan, USA

This invited session will examine how community-based participatory action research can inform trauma policy and practice. Using examples from a program of research on sexual assault victims’ post-assault help-seeking experiences, this session will explore how to build sustainable researcher-practitioner partnerships and how to design studies that provide actionable information for policy makers. We will discuss how integrating qualitative and quantitative designs, both within and across studies, can increase utilization and dissemination of research. Strategies for data visualization and communicating findings to diverse stakeholders will be shared.

Dr. Rebecca Campbell is a Professor of Psychology at Michigan State University. Dr. Campbell’s research examines how contact with the legal and medical systems affects adult, adolescent and pediatric victims’ psychological and physical health. Most recently, she was the lead researcher for the National Institute of Justice-funded Detroit Sexual Assault Kit Action Research Project, which was a four-year multidisciplinary study of Detroit’s untested rape kits. Dr. Campbell also conducts training for law enforcement and multidisciplinary practitioners in civilian, military and campus community settings on the neurobiology of trauma. In 2015, Dr. Campbell received the Department of Justice, Office for Victims of Crime, Vision 21 Crime Victims Research Award.

Community Based Participatory Research as both a Means and an End: Lessons from a 15 Year CBPR Program with Somali Refugees

B. Heidi Ellis, PhD
Children's Hospital Center for Refugee Trauma & Resilience/Children's Hospital Boston, Boston, Massachusetts

Community-Based Participatory Research is an approach to conducting research with marginalized communities that adheres to several basic principles: Research should strengthen a sense of community identity and capacity, facilitate co-learning and establish true partnerships and shared goals. This talk will follow the arc of a more-than-15-year CBPR program with Somali refugees, sharing key challenges and successes along the way. The talk will highlight how following a community, and questions of importance to that community, fundamentally differs from more traditional academic models of research that follow a specific diagnosis or question. In this example, a research program initiated around trauma and PTSD dynamically shifted in response to sociopolitical events to address questions of discrimination, radicalization to violence, and community resilience. Findings from this research reinforce the importance of approaching research in a way that fundamentally builds community identity and capacity, and suggest that CBPR is a critical approach not only to research but to prevention and intervention.

B. Heidi Ellis, PhD, is an Associate Professor in Psychology and Psychiatry at Harvard Medical School and Boston Children's Hospital, and a licensed clinical psychologist. She is also the Director of the Refugee Trauma and Resilience Center at Boston Children's Hospital, a partner in the National Child Traumatic Stress Network. Dr. Ellis' primary focus is on understanding and promoting refugee youth mental health and well-being, with a particular emphasis on understanding how trauma exposure, violence and social context impact developmental trajectories. Over the past 15 years she has conducted a Community-Based Participatory Research program with Somali youth; she is currently Principal Investigator of a multi-site, longitudinal research project examining developmental pathways to and away from violence, including openness to violent extremism, gang involvement and constructive civic engagement. Dr. Ellis was an advisor to the Boston Pilot Project on countering violent extremism, and is currently piloting a multidisciplinary model to promote community resilience to violence. She is also co-developer of the nationally recognized trauma treatment model, Trauma Systems Therapy.

This presentation will demonstrate several innovative technologies being developed to enhance and accelerate research and learning in individuals on the autism spectrum, including wireless sensors for long-term monitoring of physiological arousal and challenging behavior in natural settings; wireless three-axis accelerometers and pattern recognition algorithms that can automate the detection of stereotypical hand flapping and body rocking; and unobtrusive audio and video capture systems able to gather ultradense longitudinal records of behavior and development in home environments.

Dr. Matthew S. Goodwin is an Interdisciplinary Associate Professor at Northeastern University with joint appointments in the Bouvé College of Health Sciences and College of Computer & Information Science, where he is a founding and key faculty member of a new doctoral program in Personal Health Informatics and Directs the Computational Behavioral Science Laboratory. Goodwin is also a Visiting Associate Professor in the Department of Biomedical Informatics at Harvard Medical School, an Adjunct Associate Professor of Psychiatry and Human Behavior at Brown University, and the former Director of Clinical Research at the MIT Media Lab. He has previously served on the Executive Board of the International Society for Autism Research and the Scientific Advisory Board for Autism Speaks. He has more than 20 years of research and clinical experience working with children and adults on the autism spectrum and developing and evaluating innovative technologies for behavioral assessment and intervention. Goodwin has received several honors and obtained research funding from a variety of sources. He received his BA in psychology from Wheaton College and his MA and PhD, both in experimental psychology and behavioral science, from the University of Rhode Island. He completed a postdoctoral fellowship in Affective Computing in the MIT Media Lab in 2010.

Trans-formative Change: Policy, Treatment, and Community Goals for Supporting Transgender Trauma Survivors

4 Case Western Reserve University, Washington, D.C., District of Columbia, USA
5 George Washington University, Washington, District of Columbia, USA

Transgender and gender non-conforming (TGNC) civilian populations report among the most elevated exposure to traumatic stress of any civilian populations world-wide. Moreover, in the United States, TGNC individuals also serve in the military at three times the rate of cis-gender individuals. Thus, TGNC populations are over-represented in a variety of trauma-exposed groups, and exposure to traumatic stress is chronic and persistent in the lives of many TGNC people. However, many trauma-oriented clinicians are unfamiliar with the unique needs and challenges of TGNC people, while trauma-oriented researchers may overlook this population altogether.

This panel utilizes gender identity as a lens through which to explore issues of trauma, community, and intersectionality. Drawing on the expertise of clinicians and researchers who focus on trauma in various TGNC communities (e.g., homeless youth, veterans, immigrants, and general outpatient) as well as experts in the field of policy related to TGNC equality and health, this panel will broadly outline current understandings of those treatments and supports most relevant to TGNC populations, as well as speak to directions for future change.

The Mental Health Impact of Family Separation: Research, Practice and Policy

3The University of Tulsa, Tulsa, Oklahoma, USA
4Zurich University, Zurich, Switzerland, Switzerland

Forced separation from loved ones has been found to have a profound and long-lasting impact on mental health. This panel provides three perspectives on this critical public health issue. Angela Nickerson will discuss the recent ISTSS Statement on the Importance of Keeping Families Together. Nickerson will also present research findings from a survey of 1,091 refugees and asylum seekers living in Australia, outlining the psychological effects of forced family separation and potential mechanisms underlying these mental health outcomes.

Eva Alisic will share insights from research on family separation in the context of domestic homicide. When one parent kills the other parent, children experience multiple types of loss at once. In the subsequent decision-making by child protection workers, questions regarding separation from siblings and contact with the perpetrator frequently come up. Alisic will describe key findings regarding children’s circumstances and perspectives on these issues.

Elana Newman will discuss roles for trauma experts who want to support trauma-informed immigration legal work and help separated families. Newman will describe collaborative work she has done with a U.S. university legal immigration training clinic: (1) supporting the education and practice of law students and (2) educating/supervising psychology students to conduct trauma-focused assessments for asylum seekers. She will describe a pilot service-learning course she implemented this year bringing a psychology student to accompany law students to do work at a U.S. family detention center. Ulrich Schnyder will lead discussion on the importance of this issue in the current global context and how research can guide practice for those supporting individuals separated from their loved ones.

Manifestations of prejudice and hate occur all over the world. Hate-based violence is a specific type of trauma and is defined as violence against a person that is motivated by bias and prejudice against the person’s perceived group membership (Federal Bureau of Investigation, 2013; Green, McFalls, & Smith, 2001; Victorian Equal Opportunity and Human Rights Commission, 2010). Group membership might be classified by race, ethnicity, gender, gender identity, sexual orientation, religion, national origin, disability, or other personal characteristics. The trauma of hate-based violence is rarely reported as many countries have no infrastructure or legal framework to collect and report these incidents (Perry, 2014). In fact, the report of the European Commission Against Racism and Intolerance (ECRI, 2016) stressed that the actual scope of hate-based speech, incidents and crimes has not been comprehensively assessed due to a lack of systematic information and data collection. Existing research suggests hate-based violence is associated with negative consequences for the survivor, the survivor’s community and society at large. However, direct and systematic research on the subject is still very limited and has mostly been carried out in developed countries (Dzelme, 2008). There is an urgent need to understand and respond to the health needs of victims of hate-based violence.

The aim of this briefing paper is to review existing research on the trauma of hate-based violence and the mental health needs of survivors of this type of violence. It is important to note that the majority of research on the trauma of hate-based violence has been conducted in high-income and Western countries. This briefing paper reviews levels of hate-based violence, prevalence, barriers to reporting hate-based violence, psychological and social effects, typology of perpetrators, and mental health interventions for survivors. Recommendations are made for research, clinical practice and policy.

In 2018, ISTSS appointed a work group to review the scientific literature on sexual assault and harassment and develop a briefing paper providing and overview of key findings and recommendations. In this session, members of the work group will share findings related to the global prevalence of different forms of sexual assault, including sexual harassment. The mental and physical health impact of sexual assault and harassment will be discussed. Empirically supported treatments will be reviewed, as well as common barriers for treatment seeking. Global priorities for addressing sexual assault in the areas of policy, research, and practice will be delineated.

Over the last three years, the ISTSS Treatment Guidelines Committee has updated the ISTSS Recommendations for the Prevention and Treatment of PTSD in Children, Adolescents and Adults, and developed ISTSS Position Papers on Complex PTSD*. A rigorous methodology was developed and followed; scoping questions were agreed upon, systematic reviews were undertaken and studies selected for inclusion according to the agreed inclusion criteria. Meta-analyses were conducted to address the scoping questions with usable data from included studies. The results of the meta-analyses were then used to generate recommendations for individual prevention and treatment interventions using the agreed definition of clinical importance and recommendation setting algorithm.

This panel, comprising members of the ISTSS Treatment Guidelines Committee, will introduce and discuss the methodology used, recommendations and position papers.

*These documents will be published on the ISTSS Website in November 2018.

This panel will highlight efforts to understand and address sociopolitical violence in Latin American contexts that range from post-conflict to ongoing, violent upheaval. Dr. Reyes will share the unique adaptation of an evidence-based treatment, Child-Parent Psychotherapy, into Semillas de Apeno, a group intervention for the parents of young children who have been heavily impacted by armed conflict, forced displacement, and chronic political violence in Colombia. Dr. Llorens will present three diverse case studies of communities in Caracas, Venezuela that explore psychosocial and ecological perspectives on trauma and identify possible lines of community-based intervention. Through his work with torture survivors and the families of desaparecidos, Dr. Tejada Guíñez will describe how Chile’s national efforts at reparation and rehabilitation continue twenty-eight years after the fall of its military dictatorship. Panelists will be joined by Dr. Lieberman in a conversation on the complexities of transforming sociopolitical violence and promoting healing within a family, neighborhood, and country.

Treating Sleep Problems Associated with Trauma and PTSD

DeViva, Jason, PhD; McCarthy, Elissa, PhD

2National Center for PTSD, Executive Division, West Haven, Connecticut

Sleep difficulties have been part of the diagnostic criteria of posttraumatic stress disorder (PTSD) since the diagnosis was first established, and they are among the most commonly reported symptoms among individuals exposed to trauma. Individuals exposed to trauma or diagnosed with PTSD are more likely to experience difficulties initiating and maintaining sleep, nightmares, sleep breathing disorders, and REM sleep behavior disorders. There is also evidence suggesting that sleep difficulties may play an important role in the development of PTSD, and impaired sleep is associated with many of the problems with health and functioning commonly seen in PTSD. Effective treatments for sleep problems are not widely available, potentially making trauma-exposed individuals more vulnerable to later difficulties. Sleep problems may persist after otherwise successful response to PTSD treatment and treatment of some sleep problems may improve PTSD symptoms.

This workshop will begin by examining research on the relationships among trauma, posttraumatic stress, insomnia, sleep breathing disorders, and other sleep disorders. A basic behavioral model of the development of insomnia will be presented, and specific aspects of posttraumatic stress that may precipitate or perpetuate insomnia will be identified. The majority of the workshop will focus on assessment and treatment. The use of established, evidence-based assessment of both posttraumatic symptoms and sleep will be emphasized. Guidelines for when to refer to sleep clinics will be presented. The current levels of evidence supporting treatments for PTSD, insomnia, nightmares, sleep breathing disorders, and other sleep disorders will be reviewed. Strategies for sequencing treatments based on symptom presentation and patient willingness will be discussed. The workshop will place particular emphasis on cognitive-behavioral therapy for insomnia (CBT-I), the gold standard treatment for insomnia, and its use when patients have been diagnosed with PTSD. Evidence supporting the use of CBT-I when comorbid PTSD is present will be examined, and potentially beneficial modifications to CBT-I will be reviewed. The workshop will also provide suggestions for how to address PTSD symptoms when patients choose to treat sleep disorders, and for how to address residual sleep difficulties after otherwise effective PTSD treatment. Suggestions for increasing adherence to treatment will be presented, with emphasis on treatment of sleep breathing disorders. Options for using technology to augment assessment and treatment will also be discussed. De-identified case material will be presented to illustrate treatment concepts and recommendations.

Survivors of violent acts or disasters, emergency responders, abuse victims and combat veterans are often associated with the risk of developing PTSD and many clinicians are well-equipped to provide services for those populations. When trauma and PTSD are related to experiences involving racial discrimination and systemic racism, the mental health community is less prepared.

In this full-day pre-meeting institute, the presenters will explain trauma that results from experiences of racism and how people of color can develop PTSD from events that may include:

- Racial profiling and police violence
- Workplace discrimination and harassment
- Community violence
- Distressing medical/childbirth experiences
- Incarceration
- Difficult immigration experiences
- Ethnic cleansing and torture

The presenters will provide an overview of the cultural factors relevant to the most common ethnic and racial minority groups, with an emphasis on understanding and assessing PTSD caused by
racial trauma. Using research findings to date, they will describe the various facets of racial trauma, including the experience of historical, cultural, and individual trauma, and how these may or may not fit into a DSM-5 framework. They will provide techniques attendees can utilize to assess race-based stress and trauma, including validated self-report measures and clinical interviews. They will also describe a group treatment for race-based trauma that has been successfully implemented at several VA facilities for veterans. The presenters will share case examples and provide time for participants to discuss their own cases. Attendees will also learn about the disparities in mental health treatment for people of color and how racial trauma can impact the therapeutic relationship. Finally, the presenters will review the research on the treatment of racial trauma and discuss their own research in this area, including an RCT underway.

Participants will learn how to:

- Define racial trauma and the cultural considerations in treating race-based PTSD.
- Describe how racial trauma may develop and be maintained.
- Utilize techniques to assess race-based stress and trauma.
- Identify the various facets of racial trauma, including the experience of historical, cultural, and individual trauma.
- Discuss the impact of racial trauma on the therapeutic relationship.

Since the introduction of psychopathology as a network of interacting symptoms, tools to investigate network structures based on clinical data have rapidly evolved. In this workshop we will discuss state-of-the-art methods of estimating and analyzing network models, and caveats for interpretations based on these models.

The morning session will cover an introduction to networks in the context of PTSD research, basic programming skills needed to perform a network analysis, and a tutorial on estimating cross-sectional networks. The afternoon session will cover more advanced topics such as estimating the accuracy of cross-sectional networks, and estimating networks based on n=1 time-series data. By the end of the workshop, attendees will have the basic skills needed to perform network analysis on their data, and will be able to locate resources for more complex analyses.
We will provide exercises based in the statistical software R. We therefore request attendees to bring a laptop with R and R studio installed. Prior experience is not required, however we encourage attendees to get acquainted with these programs using the following materials:

Interest in and utilization of complementary and integrative health modalities by the general public has increased in recent years. One of these modalities — yoga — is increasingly used in the treatment of a variety of physical and mental health conditions, including PTSD. Yoga, defined here as a combination of physical forms, focused breathing and mindfulness, is a promising complement, potential precursor or alternative to evidence-based psychotherapy. A trio of presenters (nurse scientist and psychiatric/mental health nurse practitioner; clinical research psychologist/yoga practitioner and meditation teacher; and yoga teacher/psychotherapist) describe the current state of the science of yoga interventions for PTSD and teach participants techniques to integrate trauma-informed yoga in clinical work and clinician self-care. Podium presentations include 1) psycho-physiological model of the effects of yoga on PTSD symptoms; 2) summary of objective research outcome measures (biological markers and psychophysiological data) of the effectiveness of yoga for PTSD; 3) description of the principles of Trauma Center-Trauma Sensitive Yoga (TC-TSY); 4) overview of yoga interventions used in PTSD research; and 5) summary of the current quantitative and qualitative evidence supporting yoga as an intervention for PTSD. The workshop also provides experiential segments during which participants are introduced to yoga practices, including TC-TSY, which they can use in their clinical work with clients and for clinicians’ self-care. Experiential yoga segments will include breathing techniques that are grounded to body sensations and reduce rather than activate the sympathetic nervous system. TC-TSY aims to cultivate awareness of the mind-body connection and to build self-regulation skills to address the way that trauma is held in the body in a way that psychotherapy does not. TC-TSY is yoga that focuses on building safety so student(s) can practice interoception, making choices and taking effective action. It can be used as an adjunctive treatment for trauma that is non-prescriptive and also creates a shared experience between the student(s) and teacher.

Moral injury is a relatively nascent construct that has recently received increased attention. Mounting research suggests that morally injurious events may result in different symptom presentations compared to traumatic experiences that are primarily based on intense fear (i.e., life threat; e.g., Stein et al., 2012; Litz et al., 2018). It has also been suggested that existing evidence-based treatments for PTSD, such as Prolonged Exposure and Cognitive Processing Therapy, may not sufficiently address moral injury (e.g., Gray et al. 2012; Steenkamp et al. 2013), although these assumptions have not yet
The objective of this institute is to demonstrate how to treat moral injury-based PTSD in service members and veterans using Prolonged Exposure and Cognitive Processing Therapy. Although it is sometimes assumed that adaptations or modifications to the respective treatment protocols are necessary in the context of moral injury, experts in the respective therapies will demonstrate how existing Cognitive Processing Therapy and Prolonged Exposure treatment protocols may be utilized to effectively treat moral injury-based PTSD. Institute attendees will learn how to: 1) distinguish moral injury-based PTSD from PTSD that results from non-morally injurious events, 2) identify appropriate moral injury-based treatment targets, and 3) apply Prolonged Exposure and Cognitive Processing therapy to effectively treat moral injury-based PTSD.

Case examples taken from diverse treatment settings will be presented to illustrate specific treatment processes that are critical to effectively addressing moral injury in the context of PTSD. Treatment targets may be specific for moral injury. In Cognitive Processing Therapy this includes challenging moral injury-based cognitions through cognitive restructuring. In Prolonged Exposure this includes processing the meaning of the trauma and reducing avoidance behaviors. Along with outcome data, presenters will include audio recordings or exemplar session transcriptions to enhance attendees’ learning. Other non-specific factors, such as provider bias, that may impact the treatment process will also be discussed and attendees will have the opportunity to ask questions about the use of Prolonged Exposure and Cognitive Processing Therapy to treat moral injury-based PTSD.

Psychosocial responses to traumatic events at the individual and community level have received growing attention in recent years and are gaining momentum in light of recent mass traumatic events worldwide including conflicts, terrorist attacks and natural disasters. Unlike routine life, traumatic or emergency situations are unexpected, unstructured events. First response in these situations is of utmost importance: immediate, focused and efficient interventions are beneficial for the reduction of acute stress reactions and a return to normal functioning as well as decreasing the risk for future onset of post-traumatic symptoms.

The aim of this presentation is to present the SIX C's model - a new psychological first aid approach – immediate cognitive-functional psychological first aid – for the global nonprofessional community as well as for first respondents. The model addresses the need to standardize interventions during an acute stress reaction and intends to help shift the person from helplessness and passiveness into active effective function, within minutes, in the immediate aftermath of the traumatic event. The model is based on four theoretical and empirically tested concepts: (1) Hardiness, (2) Sense of Coherence, (3) Self-Efficacy, and (4) on the Neuro-bio-psychology of the stress response, focusing on the interaction between the limbic system and the prefrontal cortex during stressful events.

The main guidelines of the model all start with the letter “C” are: Cognitive-Communication, Challenge, Control, Commitment, Continuity.

Preliminary results on the effectiveness of the SIX C's model in terms of increasing resiliency, reducing anxiety and improving perceived self-efficacy are presented. To date, this approach has been recognized by the Israeli Ministry of Health as the Israeli national model for psychological first aid. This model has also been adopted and implemented by the Israeli Ministry of Education, and during 2018-2019 all the educational systems in Israel will be trained according to the SIX C's model.

This Pre-Meeting Institute will train the participants in using the SIX C's guidelines in different scenarios (EQ School shooting, car accidents, nature disaster) and different population (EQ Adult, children, toddlers).

The session will include video demonstrations, case studies and hands on training.

Pocket notebooks and stickers of the SIX C's model will be provided to all participants.

This half-day pre-meeting institute will focus on improving access and quality of treatment for Service members and Veterans by integrating research and knowledge of military culture into patient care, with a focus on the following tools for providers:

1. Approaches to fostering communication regarding contextual/environmental barriers to care, including perceptions of cultural differences (e.g., communication with providers, navigating services/resources for care, stigma, lifestyle preference).
2. A military adaptation of four acculturation measures (orientation, psychological adaptation, sociocultural adaption, cultural distance) with discussion of how this assessment facilitates emphasis on functional assessment approach as opposed to solely symptom reduction.
3. Modules from seven VA/DOD online military cultural competence courses, which integrate research into clinical care recommendations.
4. Key information and resources from the NC-PTSD/VA Community Provider Toolkit relevant to screening for military service, military culture educational resources, as well as for working with diverse Veteran populations (e.g., women Veterans, LGBT).
5. Avatar-based learning program related to treatment of PTSD and sleep disorders common in Service members and Veterans that includes experiential exposure to aspects of military culture.

Cognitive Processing Therapy (CPT) has strong evidence to support its use for PTSD (Resick, et al., 2017, Resick, et al. 2015, Resick, et al., 2012). Despite its 40-year history, myths about client readiness for trauma-focused therapy have endured and can result in clients with PTSD not receiving adequate treatment because they are considered to be at high risk. This can lead to clients who seek help receiving treatment that focuses only on mitigating risk or not receiving treatment that focuses on PTSD symptom reduction. However, symptom improvement in PTSD with CPT treatment is associated with reduced suicidal ideation (Bryan et al., 2017; Gradus et al., 2013). Additionally, Rudd and colleagues demonstrated that the use of brief cognitive behavioral therapy for suicide prevention (BCBT) reduced suicide attempts by 60 percent as compared to treatment as usual. Although BCBT is effective for suicidal behaviors, completing both CPT and BCBT is not logistically feasible for many clients and the overlap in skills learned is significant. Integrating empirically supported techniques for suicide risk into trauma-focused therapy is needed. Crisis response planning (CRP), a technique from BCBT, is a personalized problem-solving tool with a focus on self-management of crises and has demonstrated efficacy. CRP has been shown to reduce suicide attempts by 76 percent, reduce suicidal ideation, and reduce psychiatric inpatient duration in comparison to treatment as usual (Bryan et al., 2017). Despite this, clients with PTSD and chronic suicidality and multiple, potentially lethal suicide attempts may not receive adequate treatment. Clinicians may unintentionally collude with clients’ avoidance of discussing traumatic events, fear treating patients with significant self-injurious behavior or suicidality, and/or not understand how to integrate suicide prevention techniques (i.e., CRP) into CPT leading clinicians to exclude clients from helpful treatment options. Four CPT trainers and an expert in CRP, treating both civilians and military populations will discuss integrating CRP into CPT for clients who engage in self harm or are considered at high risk for suicide. This integration offers a strong potential option for clinicians treating clients who have been referred to repeated stays in higher level of care or seen multiple therapists. Instruction in the use of CRP while using and maintaining fidelity to CPT will be provided. Specific topics in the application of CPT for clients with PTSD and suicide attempts or self-harming behaviors will also be shared with case examples highlighting unique difficulties within the field of suicidality.

The Department of Veterans Affairs (VA) has developed a suite of free, publicly available mobile applications (apps) designed to support the mental health needs of Veterans with PTSD and related concerns (e.g., insomnia, anger management). Treatment companion apps, such as PE Coach (for Prolonged Exposure therapy), are designed to aid in the delivery of evidence-based treatments. Self-management apps, such as PTSD Coach, can be used independently or in conjunction with treatment. Apps can improve access to psychosocial resources for Veterans, particularly those who might otherwise not access or complete treatment due to
stigma, cultural beliefs about mental health care, geographical limitations, or other systemic barriers (DeViva et al., 2016; Martsolf et al., 2016; Sayer et al., 2017). Emerging evidence suggests that mobile apps may improve outcomes (see Kuhn et al., 2017; Miner et al., 2016; Possemato et al., 2016). Among individuals engaged in mental health treatment, these tools may improve treatment efficiency (Donker et al., 2013; Ventola, 2014), client engagement (Gaggioli & Riva, 2013) and accuracy of self-reports (Bush et al., 2013; Kuhn et al. 2014).

Although many providers and clients are interested in incorporating technology into treatment (Bush & Wheeler, 2015; Koffel et al., 2016; Miller et al., 2017), providers may not have received training in how to integrate these tools into care. As early leaders in the development, research, and clinical integration of these apps for Veterans, subject matter experts from the VA’s National Center for PTSD are uniquely positioned to train providers on methods of integrating these tools into mental health care. Since July 2017, the presenters have trained providers across VA and held over 35 interactive conference calls to collect feedback and lessons learned about integrating these tools into care with Veterans in a variety of clinical settings.

This highly interactive PMI will include live demonstration, brief video segments, small group activities, lecture and discussion. Presenters will assume a basic understanding of CBT and PTSD. Real-world use cases from VA providers will be presented along with research findings to facilitate translation of knowledge into practice. Participants will be provided with tablets to gain hands-on practice. Topics covered will include technology and culturally competent care, empirical support for use of mobile and online tools in care, and treatment planning. Because the apps and online programs are publicly available and address several mental health concerns, we anticipate that this PMI will be relevant to a broad audience of community or VA providers that treat post-traumatic stress and its many related sequelae, such as insomnia, anger and depression.

Co-presenters for this workshop are certified trainers of Prolonged Exposure and are keen to provide this advanced workshop for practitioners of this therapy, particularly when working with military veterans and first responders. Provision of Prolonged Exposure to public service personnel is often more clinically challenging than provision with civilian populations, as public service personnel are commonly exposed to varied traumatic events at rates greater than those experienced by civilian populations. This workshop is ideally positioned to support those practitioners working with public service populations, and who are eager to engage in an advanced workshop that will address clinical challenges that occur working with public service populations.

2018 Award Winners

Thursday Presentations

Frank W. Putnam Trauma Research Scholars
This award is presented to Student Members who submit proposals judged to have the greatest potential to contribute to the field of traumatic stress.

Jessica Blaney
Daniel Lakin

Chaim and Bela Danieli Young Professional Award
This award recognizes excellence in the traumatic stress field by an individual who has completed his or her training within the last five years.

Aoife O’Donovan, PhD

Lifetime Achievement Award
This award is the highest honor given to an individual who has made great lifetime contributions to the field of traumatic stress.

Richard Bryant, PhD

Friday Presentations

Award for Outstanding Service to ISTSS
The Award for Outstanding Service to ISTSS is designed to recognize a member of ISTSS who has made a significant and sustained contribution to ISTSS that has enhanced the Society and helped it achieve its goals.

Danny Kaloupek, PhD

Robert S. Laufer Award for Outstanding Scientific Achievement
This award is given to an individual or group who has made an outstanding contribution to research in the field of traumatic stress.

Roxane Cohen Silver, PhD

Sarah Haley Memorial Award for Clinical Excellence
This award is given to a clinician or group of clinicians in direct service to traumatized individuals.

B. Heidi Ellis, PhD

Saturday Presentations

Public Advocacy Award
This award is given for outstanding and fundamental contributions to advancing social understanding of trauma.

Daniel Press

Frank Ochberg Award for Media and Trauma Study
This award recognizes significant contributions by clinicians, researchers, graduate students and scholars working at the intersection of media, journalism and trauma.

Matthew Pearson

### Presentation Level

All presentations designate the knowledge/skill level required of the participant as either: Introductory (I), Intermediate (M) or Advanced (A). These are used as a general guide only since attendees have very diverse educational and professional backgrounds.

**Introductory (I):** Presentations that all participants (including undergraduate students) with any appropriate background will be able to fully comprehend and/or appreciate. Presentations will discuss concepts that are considered basic skills/knowledge for those working in the field.

**Intermediate (M):** Presentations that participants may more fully comprehend/appreciate if they have at least some work experience in the topic to be discussed.

**Advanced (A):** Presentations consisting of concepts requiring a high level of previous educational background, or work experience, in the particular area/topic to be discussed as well as being most geared for specialists and those in advanced stages of their career.

Presentation Type Descriptions*

**Case Study Presentation**
Sessions use material from a single or a set of cases to illustrate clinical, theoretical or policy issues. These sessions may involve the audience in discussion of the case material presented.

**Media Presentation**
Session involving presentation of a segment of film, video, music, drama, literature, artwork or other form of media relevant to traumatic stress, along with discussion.

**Oral Paper Presentation as “Flash Talks”**
An exciting new series of talks: Presenters will be required to describe their study goals, methods and results succinctly, somewhat similar to the format of “TED talks,” keeping to a 5-minute time length and a 10-slide maximum.

**Panel Presentation**
Sessions that include three to four participants discussing a common theme, issue or question. Panels may include short statements during which panelists outline diverse or similar approaches to the same question. Panels are typically more interactive than symposia, involving active discussion among the panelists.

**Poster Presentation**
Individual presentation in a poster format on a topic related to traumatic stress, typically including the presentation of research data.

**Pre-Meeting Institute (PMI)**
Institutes are full- or half-day sessions that provide an opportunity for intensive training on topics integral to the conference program, presented by leaders in the field.

**Symposium**
Session that includes a group of three to four sequential presentations, each related to the overall theme of the symposium.

**Workshop Presentation**
Instructional session that helps increase participants’ understanding and skill in a particular area of interest. Such sessions may include active involvement of the audience.

* Presentation types are color-coded throughout the schedule.

Topical Tracks
The program chairs have grouped presentations on similar themes together into tracks so it is easier for you to find the programs in your area. However, please note that not everything would fit into the tracks. There are more presentations outside the tracks that may be related or of interest and you should check your schedule.

Look for these throughout the meeting schedule in the left column:

**Assessment and Diagnosis Track**
Presentations on assessing trauma

**Biological/Medical Track**
Presentations on biological and physical aspects of trauma

**Child Trauma Track**
Presentations on various aspects of trauma in children and adolescents

**Immigrant/Refugee Track**
Presentations on trauma in immigrant and refugee populations

**Gender/Orientation Track**
Presentations on issues relating to trauma, gender identity and/or sexual orientation

**Military/Veteran Track**
Presentations on trauma in military and veteran populations

**Public Health Track**
Presentations on trauma and public health
