Chairs Letter

Welcome to the ISTSS 35th Annual Meeting, “Trauma, Recovery, and Resilience: Charting a Course Forward.” This year’s theme alludes to a watershed moment in the field’s history: the 1992 publication of Judith Lewis Herman’s Trauma and Recovery, a book that not only opened the eyes of the public and professionals to the impact of trauma, but also provided hope and crucial networking opportunities. We aim to honor the prescience and vision of key pioneers in the field and link their insights to the brilliant contemporary work on trauma and recovery emerging globally.

In our keynotes, we’ll be honoring visionaries and charting a course forward. Attendees will hear from Judith Herman (Truth and Reconciliation: Envisioning Justice from the Victim’s Perspective), ISTSS lifetime achievement awardee, Patricia Resick (Better Together: Examples from Cognitive Processing Therapy of the Interaction Between Clinical Practice and Research), and Theresa Betancourt (Addressing the Effects of Trauma in Children, Youth and Families Facing Adversity Globally).

For the submitted program, we reviewed a remarkable group of abstracts to create an extraordinary three days focused on advancing and connecting our understanding of trauma’s multiple dimensions to the therapeutic processes and relationships that promote recovery. The resulting program embodies the scientific rigor of ISTSS membership and its ongoing commitment to closing the science-to-practice gap and reaching those who remain marginalized and underserved.

The 2019 invited program consists of an international selection of speakers addressing highly relevant issues:

- a special two-part panel on conceptualizing childhood adversity in biological terms (Kerry Ressler & Susan Miller, chairs; Elisabeth Binder, Ronald Kessler, Bruce McEwen, Charles Nemerof, Martin Teicher, Susan Miller);
- epidemiology and large-scale efforts to reduce childhood trauma (David Finkelhor);
- new directions in resilience science (Ann Masten);
- a symposium on the novel harms of political violence and therapeutic responses from Europe (co-sponsored and presented by leaders from ESTSS);
- two complementary panels on applying the new ISTSS treatment guidelines to adults and children (ISTSS Guidelines Committee);
- understanding and treating anger in the context of trauma (David Forbes);
- the state of science on how pain and traumatic stress intersect (Gordon Asmundsson);
- integrating traumatic stress and substance use problems in theory and practice (Denise Hien);
- a panel on critical updates to resilience research methodology and applications (Karestan Koenan & Christy Denckla, co-chairs; Dante Cicchetti, Laura Kubzansky, Soraya Seedat, Martin Teicher, David Williams);
- moving research and practice forward on mass casualty incidents (Dean Kilpatrick, chair; Ron Acierno, Rosaura Oren-Aguayo, Connie Best) and
- a closing plenary reflecting on future mandates for the field of traumatic stress (Judith Herman, Gladys Mwiti, Sandy McFarlane, Cherie Armour, Julian Ford).

Our opening session on Wednesday, November 13th from 6:30-8:00pm in Salon G, is dedicated to the poignant and life-affirming journeys of two women who call Boston home: Osob Issa, a clinical social worker and program coordinator at Boston Children’s Hospital’s Center for Refugee Trauma and Resilience, and Roseann Sdoia, a 2013 Boston Marathon bombing survivor and motivational speaker. The session will be moderated by ISTSS past-president Grete Dyb.

This year we are pleased to launch two initiatives—Global Ambassadors and Beyond the Room— that strive to widen the global reach and outlook of ISTSS and extend the dissemination of work shared at the annual meeting to a wider global community of researchers, practitioners, survivors, and the public. For more information see pages 13 – 16.

We are honored to welcome attendees from diverse professions, nations, and cultures in mutual learning and the shared quest of preventing trauma and promoting recovery from traumatic stress wherever there are unmet needs or emerging crises.

Welcome to Boston!

ISTSS 2019 – Announcing Two Exciting New Initiatives!

Health and resilience of people and communities worldwide would substantially improve if high quality knowledge and practice on prevention of and response to traumatic stress reached survivors, their families, communities and health providers worldwide. Yet, trauma exposed children frequently reach adulthood before knowledge from excellence in research, clinical practice and training gets anywhere near them, their families or local health providers. Overcoming this major ethical and clinical challenge is the main goal for the ISTSS.

This year we are pleased to launch two initiatives—the Global Ambassadors and Beyond the Room—that strive to:

- create a friendly and inspiring atmosphere welcoming attendees from all around the globe to explore and value different perspectives through respectful dialogue, and exchange of ideas and experiences,
- widen the global reach and outlook of ISTSS and extend the dissemination of work shared at the annual meeting to a wider global community of researchers, practitioners, survivors, and the public.

We need all of YOU to lean in, engage and contribute in and beyond the room!

After all — we’re better together.

The Global Ambassadors

All ISTSS affiliate societies have been invited to select their representative and Global Ambassador at the ISTSS 2019. This year in Boston we’re proud to welcome nine Global Ambassadors, representing all continents; Dr Gladys K. Mwiti from Kenya, Dr Misari Oe from Japan, Prof Jeong-Ho Chae from Korea, Prof Zachary Steel from Australia, Prof Monique Pfaltz and Prof Birgit Klein from Switzerland, Dr Anne Wagner from Canada, Dr Dani Mosca from Argentina and Prof Jana Javakhishvili from Georgia. You’ll recognize them by their Global Ambassadors ribbon under their name tags.

At the annual meeting in Boston the Global Ambassadors will represent their region, welcome conversations with new and frequent attendees, and will be involved in a number of activities to promote shared global learning amongst the wider traumatic stress community, such as podcasting conversations with speakers, and mentoring students in the fine art of judging for the student poster awards. Do go and say ‘hi’ if you see them at the Welcome Reception, student luncheon, poster sessions, and informally throughout the conference. We sincerely thank all Global Ambassadors and affiliate societies for your participation, involvement and support of this initiative.

Beyond The Room

The ISTSS 2019 has joined forces with André Tomlin, a world-leading science communicator and mental health blogger, known as The Mental Elf - nationalelfservice.net/mental-health. You can already listen to audio podcasts on the ISTSS Guidelines at elfi.sh/ISTSS2019-podcast.

During the meeting, André will be working alongside a dedicated Social Media Team who will be live tweeting, interviewing speakers and attendees, writing blog posts of ISTSS 2019 content, and live video streaming some of the talks. All of this content will be freely available via Twitter under the hashtag #ISTSS2019, on our ISTSS website, and on https://www.nationalelfservice.net/mental-health/. The volunteering correspondents working with The Mental Elf are students, regular ISTSS members, four young adult prior service-users from the Looking In Theatre along with their mentors Rocio Chang, Assistant Professor of Psychiatry at UCONN Health, and Jonathan Gillman, director of the Looking In Theatre. Please welcome Spencer Murray, Horlando Cornejal, Angel Cooper, Rachel Gary, William J. Koehler, Evan Auguste, Philippa Specker, Melanie Arenson, Rachel Frost, Anna Harwood-Gross, Heidi Sandnes and Harald Bækkelund treading the floors for you.
You’ll recognize the social media team by their #ISTSS2019 ribbons under their name tags. Do go and say ‘hi’ if you see them!

**We need you!**

Our team can’t do this alone. To make sure we’re getting ISTSS 2019 content out to the widest audience possible we need you to:

- Get onto twitter & use the hashtag #ISTSS2019. The person who sends the most tweets using the hashtag #ISTSS2019 during the conference will receive a special prize from the Mental Elf and the National Elf Service. Go for it!
- Exchange ideas and experiences through respectful dialogue, valuing different perspectives, in and Beyond The Room (tweet #ISTSS2019).
- And if you’re a speaker, please return the speakers form and your slides to help our Twitter team get your message out there.

**Don’t have Twitter but are keen to sign up?**

- Here is a free YouTube video on how to sign up for Twitter. [https://www.youtube.com/watch?v=WVHD1UcFl4g](https://www.youtube.com/watch?v=WVHD1UcFl4g).
- Here is an excellent free resource for information about how to get started on Twitter - [http://www.wecommunities.org/resources/twitterversity](http://www.wecommunities.org/resources/twitterversity). Once you’ve signed up, you can send any other questions you might have directly to Mental Elf, via tweeting them @Mental_Elf and don’t forget to include the #ISTSS2019 hashtag in your tweets.
- Remember to also follow @ISTSSnews and @ISTSS_Students

Meet The Global Ambassadors

Prof Jeong-Ho Chae is a researcher and psychiatrist at the Dept. of Psychiatry Seoul St. Mary’s Hospital and The Catholic University of South Korea, currently serving as Board member of the ISTSS and founder of the Korean Society for Traumatic Stress Studies (KSTSS). Jeong-Ho Chae has extensive clinical experience providing care to patients with PTSD and other trauma-related conditions. His translational research focuses on the identification of bio-psycho-socio-spiritual risk and resiliency factors following exposure to trauma.

Prof Jana (Darejan) Javakhishvili from Georgia is a clinical psychologist and professor at the School of Arts and Science at Ilia State University, director of the Institute of Addiction Studies and the current President of the European Society of Traumatic Stress Studies (ESTSS). She facilitates mental health reforms in Georgia and in a number of other formerly Soviet countries (Ukraine, Kyrgyzstan, etc.). Her research interests mainly concern mental health problems (including trauma and addiction) of war-affected populations, such as forcibly displaced people, tortured individuals and their family members.

Prof Birgit Kleim is a clinical scientist and trained CBT therapist at the University of Zurich and the Psychiatric University Hospital (PUK) Zurich, Switzerland. Her work focuses on understanding and predicting the development of PTSD, as well as understanding and augmenting evidence-based treatments, for instance by pharmacological agents acting on memory reconsolidation.

Dr Daniel L Mosca is the president of the Argentine Society for Psychotrauma and has been working as a psychiatrist in the trauma field for 25 years, mainly in Argentina, as well as following disasters in Peru, Bolivia and the US. His daily work is in Buenos Aires with a team responding to both individual and mass trauma.

Prof Gladys K. Mwiti is a clinical psychologist, founder & CEO of the Oasis African Centre for Transformational Psychology & Trauma at the Nairobi Women’s Hospital in Kenya. She has extensive experience in interventions following mass trauma through task-shifting and community-based initiatives as well as clinical practice, training, and supervision of trauma psychologists.

Prof Misari Oe is a researcher and psychiatrist at the Department of Neuropsychiatry, Kurume University School of Medicine, Kurume, Japan. She currently serves as Board member for both the ISTSS and Japanese Society for Traumatic Stress Studies (JTSS). She has extensive expertise on disaster mental health, predictors of long-term severe psychological distress following a nuclear disaster, biomarkers for PTSD, and the impact of intercultural issues on stress- and trauma-related disorders.

Prof Monique Pfaltz is a psychotherapist and clinical and experimental researcher at the University of Zurich and the University Hospital Zurich, Switzerland. Her research assesses socio-emotional processes (e.g., interpersonal boundary setting, regulation of closeness and distance, emotional reactivity, facial emotion recognition) in healthy individuals and patients affected by traumatic stress, with a focus on childhood maltreatment (abuse and neglect).
Meet The Global Ambassadors

Prof Zachary Steel is a clinical psychologist from Australia. He heads a program of clinical research into the impact of trauma on veterans, first responders, refugees, asylum seekers and civilian populations at University of New South Wales. The work of Prof Steel with asylum seeker populations in Australia has helped to develop an evidence base on the adverse mental health consequences of harsh asylum policies including the use of immigration detention and temporary protection visas.

Dr Anne Wagner is a clinical psychologist and researcher at the Ryerson University, Canada, committed to helping understand and improve trauma recovery. She is the founder of Remedy, a mental health innovation community, and the Past-Chair of the Traumatic Stress Section of the Canadian Psychological Association.

Clarifying and Exploring the NIMH Grant Process: An Informal Discussion
*Bring Your Own Lunch session – Grab a lunch and join us*
Thursday, November 14, 1:00 p.m. – 2:30 p.m.
Salon G, 4th Floor

National Institutes of Health (NIH) research funding is a competitive process. Prospective investigators are likely to benefit by being aware of the National Institute of Mental Health (NIMH) strategic plan and research priorities, familiarizing themselves with the procedures for successful grant submission and review, and staying informed of the latest developments and notices regarding the submission process. This session is designed to allow discussion of current funding interests for traumatic stress research at NIMH as well as provide information to help investigators navigate changes that have taken place in the past few years in how NIH receives, reviews, and funds grant applications, including clinical trials. This discussion with NIMH staff promises to explain effective techniques for transforming research questions into competitive applications and for presenting ideas to reviewers and the Institute. Special focus will be placed on reviewing NIMH interests in developmental, translational, and global traumatic stress research and the mechanisms available to fund such work. Finally, through a Q&A session, NIMH program members will provide more specific information and discussion on the development, submission, and review of applications with the goal of a NIMH funded grant.

**Presenters/organizers:**
Susan Borja, Ph.D. NIMH
Farris Tuma, Sc.D. NIMH

Meet the Editor-in-Chief of the *Journal of Traumatic Stress*
Thursday, November 14, 9:45 a.m. – 11:00 a.m.
Salon A/B, 4th Floor
Kerig, Patricia, PhD
*University of Utah, Salt Lake City, Utah, USA*

In this informal conversation hour, Patricia Kerig, the Editor-in-Chief of the *Journal of Traumatic Stress*, will be available to meet with interested conference attendees. Dr. Kerig will respond to participants’ questions regarding the JTS publication process, including how authors might determine whether JTS is the appropriate outlet to which to submit their research, the factors that are involved in decisions about whether to accept submissions, the review process, best practices for responding to reviewers, and strategies for navigating the manuscript preparation stage. Dr. Kerig also would be happy to talk about how participants might become more actively involved with JTS as authors, reviewers, or Editorial Advisory Board members.

**NOTE:** This session does not carry continuing education credits

Keynote Speakers

Pamela Collins is Professor of Psychiatry and Behavioral Sciences and Professor of Global Health at the University of Washington, where she directs the Global Mental Health Program. She is a psychiatrist and mixed methods researcher with 25 years of experience in global public and mental health research, education, training and capacity-building, and science policy leadership. Prior to her current role she directed the Office for Research on Disparities & Global Mental Health and the Office of Rural Mental Health Research at the National Institute of Mental Health (NIMH) (USA). Dr. Collins’s research has focused on social stigma related to mental illness and its relationship to women’s health behaviors; the intersections of HIV prevention, care, and treatment; and the mental health needs of diverse groups in the US, Latin America and Sub-Saharan Africa. She is developing new research on urban adolescent mental health in cities around the world.

Professor Tim Dalgleish is a clinical psychologist. He works both as a research scientist at the University of Cambridge and as a practitioner. He is Director of the Cambridge Centre for Affective Disorders. His research focuses on understanding and developing psychological treatments for common mental health problems, such as depression, anxiety, and post-traumatic stress. He adopts a translational approach, seeking to utilise insights from basic cognitive neuroscience to enhance clinical interventions for these conditions. His work employs a range of scientific methods from brain imaging through to the use of large scale clinical trials.
ISTSS Membership

Join the International Society for Traumatic Stress Studies and become a member of the largest association dedicated to the discovery and dissemination of knowledge about policy, program and treatment initiatives that seek to reduce traumatic stressors and their immediate and long-term consequences.

In addition to discount registration rates to the ISTSS Annual Meeting, membership in ISTSS provides you:

- Access to webinars, recorded sessions and other online learning.
- Access to prepublication, current and archived issues of the *Journal of Traumatic Stress (JTS)*. Published bi-monthly, JTS is the leading source in the traumatic stress field.
- Receive the electronic, bi-monthly eNewsletter, StressPoints, written by members, for members and offers news about the field and the Society.
- Members receive discounts on selected publications from Taylor & Francis, a leading source of trauma journals and texts.
- Receive the electronic, bi-monthly ISTSS New in Peer Review, a collection of journal articles, selected by our Website Editing Team, categorized for your review.
- Access to online resources available only to ISTSS members, including validated assessment instruments, treatment manuals and other tools to assist the busy clinician and researcher
- Utilize the Career Center and connect with those advertising and searching for available positions in the field.
- Exclusive access to the “members-only” section of the ISTSS website — including an online directory of all members, an instant connection to an extensive, global network of trauma experts.
- ISTSS presents awards and recognition to individuals who have made outstanding contributions to the field. Members nominate colleagues annually for awards honoring lifetime achievement, scientific achievement, clinical excellence and more.
- Registration in the ISTSS Clinician Directory, a feature of the ISTSS website that allows the public to search for ISTSS members who identify themselves as a clinician, counselor or mental health professional.
- Opportunities to volunteer and engage with leaders in the field of traumatic stress across all committees and Special Interest Groups.

Educational Need

The ISTSS Annual Meeting provides a forum for sharing research, clinical strategies, public policy concerns and theoretical formulations on trauma. It is an international assembly of professionals and students representing an array of disciplines including psychiatrists, psychologists, social workers, nurses, counselors, researchers, administrators, victim advocates, journalists, clergy and others with an interest in the study and treatment of traumatic stress. Speakers are strongly requested to avoid unnecessary jargon and to make their work and its implication to the traumatic stress field as accessible as possible to those who do not share their particular perspective and type of scientific approach. This is designed to facilitate increased understanding of what different types of researchers (e.g., basic scientists, clinical researchers) focusing on different types of traumatic stressors (e.g., child maltreatment, disasters, terrorism, war) using different research methods and perspectives (e.g., epidemiology, genetics, psychosocial, psychobiological) have found as well as what the implications of their work are for the traumatic stress field. Our aspirational goal is to establish a jargon-free zone in which experts maximize communication of their work, findings and implications in a way that facilitates understanding and cross-fertilization among researchers, clinicians and policy makers from other perspectives.

Learning Objectives

1. Review and identify updates to prominent and emergent traumatic stress theories and methodologies, and their applications to the diversity of trauma-impacted populations.
2. Discuss advances in research and practice in the traumatic stress field which consider multiple dimensions, from neurobiology to phenomenology.
3. Identify cross-disciplinary solutions to dissemination and implementation challenges facing traumatic stress researchers and practitioners.

Satisfactory completion

Participants must complete an evaluation form to receive a certificate of completion. Your chosen sessions must be attended in their entirety. Partial credit of individual sessions is not available.

NOTE: If you are seeking continuing education credit for a specialty not listed below, it is your responsibility to contact your licensing/certification board to determine course eligibility for your licensing/certification requirement.

Trauma, Recovery, and Resilience: Journeys of Healing and Transformation in Boston
(Global, Acute-Refugee-Terror, Lifespan, I, Global)

Dyb, Grete, MD PhD¹; Issa, Osob, MSW²; Sdoia, Roseann³

¹Norwegian Center for Violence and Traumatic Stress Studies (NKVTS), Oslo, Norway
²Children’s Hospital Center for Refugee Trauma & Resilience/Children’s Hospital Boston, Boston, Massachusetts, USA
³Robostrong, Boston, Massachusetts, USA

To open the 2019 conference, we are highlighting the individuality of personal and professional journeys from trauma to recovery and resilience. We have convened two remarkable individuals who call Boston home: Osob Issa, a clinical social worker and program coordinator at Boston Children’s Hospital’s Center for Refugee Trauma and Resilience, and Roseann Sdoia, a 2013 Boston Marathon bombing survivor, motivational speaker, and author of Perfect Strangers. First, Osob Issa will share insights from her personal experience of migration from Somalia to the United States and the intersection of her own traumatic past with her professional life of helping Boston’s immigrant communities heal and grow. Osob speaks powerfully about the challenges facing refugees not only in confronting traumatic histories but in restoring meaning and connection after relocation. Roseann Sdoia will then describe a transformative journey of physical recovery and psychological resilience in the aftermath of a terrorist attack. Losing her leg as a result of injuries from two bombs detonated in Boston’s Copley Square, Sdoia’s story illuminates the human potential in the face of suffering and the centrality of social bonds in posttraumatic growth. ISTSS Past-President Dr. Grete Dyb will introduce the invited speakers and moderate a conversation and audience Q&A segment following their presentations.

Grete Dyb, MD, PhD
Norwegian Centre for Violence and Traumatic Stress Studies
Oslo, Norway

As the Principle Investigator of “The Utøya Study”, she is conducting longitudinal research projects on survivors and families of the massacre in Norway in July, 2011. She was trained in child and adolescent psychiatry, and worked many years as a clinician in hospitals and outpatient units. Her special interest is childhood trauma and posttraumatic stress reactions in children and youth has resulted in research on children youth and families exposed to traumatic events such as child sexual abuse, violence, accidents and disasters. She has authored 90 international and national scientific publications within the field of childhood trauma, disasters, terror attacks and the impact of trauma on mental health in children, adolescents and adults (https://www.nkvts.no/english/employee/dyb-grete/) and served as a teacher and supervisor for Bachelor, Master, PhD and post doc students since 1992. She recently served for six years at the International Society of Traumatic Stress Studies Board of Directors and as President of ISTSS in 2016.

Trauma, Recovery, and Resilience: Journeys of Healing and Transformation in Boston (continued)

Osob Issa, MSW
Children’s Hospital Center for Refugee Trauma and Resilience
Boston, Massachusetts, USA

Osob Issa is a clinical social worker and program coordinator at the Refugee Trauma and Resilience Center at Children’s Hospital in Boston. Ms. Issa received her master’s degree in Social Work from Boston University. She was born in Somalia and arrived in the United States as a refugee. Ms. Issa has been working with refugee and immigrant families in Boston and North America for the last 10 years through community-based participatory research and intervention. She has facilitated numerous trainings and workshops on the intersections of mental health, culture, identity, substance abuse, racial justice, resilience, and health adjustments of refugee and immigrant populations. She is an expert in building culturally responsive mental health services and is deeply committed to global struggles for social justice.

Roseann Sdoia
Boston Marathon Bombing Survivor
Boston, Massachusetts, USA

Today, as a Boston Marathon Bombing Survivor and amputee, Roseann is making great strides in changing the lives of others. As one of the top motivational speakers and more recently a published author of Perfect Strangers, (PublicAffairs 2017), Roseann combines her powerful, personal story of perseverance with her professional corporate background and offers lessons learned throughout her challenging comeback journey as insightful, motivational tools that everyone can use to discover their own unstoppable strength. Roseann’s mantra that “life is only as positive as you make it,” serves as the foundation for redefining one’s own mindset in achieving every personal and professional goal, and ultimately living a happier, richer and more fulfilling life.

Truth and Reconciliation: Envisioning Justice from the Victim’s Perspective
(Practice, Clinical Practice-Rights-Social, Lifespan, M, Global)

Herman, Judith, MD
Cambridge Health Alliance | Harvard Medical School, Cambridge Hospital, Boston, Massachusetts, USA

In the course of their recovery, victims of interpersonal violence confront the most basic questions about the meaning of justice: How can the truth be made known? Is reconciliation possible? Can the harm be repaired, and if so, what would be required to repair it? How should offenders be held accountable? These questions are particularly complicated when victims and offenders are part of the same family or community, where, if the victim dares to speak out, the bystanders will be challenged to take sides. The wishes and needs of victims are often diametrically opposed to the requirements of legal proceedings. Indeed, if one set out intentionally to design a system for provoking symptoms of traumatic stress, it might look very much like a court of law. This lecture, based on in depth interviews with victims of sexual and domestic violence, will explore the question of what justice might mean to victims, and will propose that envisioning justice within the context of a healing relationship can be a liberating act.

Judith Lewis Herman, MD, is Professor of Psychiatry (part time) at Harvard Medical School. For thirty years, until she retired, she was Director of Training at the Victims of Violence Program at The Cambridge Hospital in Cambridge, Massachusetts. Dr. Herman received her medical degree at Harvard Medical School and her training in general and community psychiatry at Boston University Medical Center. She is the author of two award-winning books: Father-Daughter Incest (Harvard University Press, 1981) and Trauma and Recovery (Basic Books, 1992). She has lectured widely on the subject of sexual and domestic violence. She is the recipient of numerous awards, including the 1996 Lifetime Achievement Award from the International Society for Traumatic Stress Studies and the 2000 Woman in Science Award from the American Medical Women’s Association. In 2007 she was named a Distinguished Life Fellow of the American Psychiatric Association.

Better Together: Examples from Cognitive Processing Therapy of the Interaction Between Clinical Practice and Research
(Practice, Clinical Practice-Res Meth, N/A, M, N/A)

Resick, Patricia, PhD, ABPP
Duke University Medical Center, Durham, North Carolina, USA

Too often, many therapists and researchers appear to be working in parallel silos and have trouble connecting and communicating. Therapists sometimes don’t trust research, or think it is not relevant and don’t incorporate new findings into their practice. Researchers, at times, ignore the experiences of therapists and don’t take their clinical wisdom or questions into account while designing therapies or conducting research. While certainly not perfect, over the past 30 years, cognitive processing therapy (CPT) for PTSD has evolved to meet the needs of clients and therapists, by modifying the protocol based on feedback of therapists as well as new research findings. Meanwhile, there are also findings from research indicating that fidelity to, and competence with the CPT protocol, produces better outcomes. Certain elements of the protocol (e.g., effective Socratic questioning, use of practice assignments, attending to assimilation before overaccommodation) also make a difference in outcomes. More recent efforts have included adapting CPT to varying client populations with different comorbidities or cultures, different timing of sessions, using more case formulation, and elucidating predictors of varying lengths of therapy. We have also developed a questionnaire for therapists to examine their own beliefs about CBT, CPT, therapy manuals and clients that may interfere with their effective implementation of evidence-based treatments and ultimately client outcomes. This presentation will present examples of how clinical practice and research have interacted to refine CPT over the past three decades and how it may evolve in the future.

After earning her doctorate from the University of Georgia, Dr. Resick served as an Assistant and Associate Professor at the University of South Dakota and Associate to Full Professor at the University of Missouri-St. Louis, where she was awarded an endowed professorship, Curator’s Professor, in 2000. During that time she developed and was Director of the Center for Trauma Recovery. In 2003, Dr. Resick became Director of the Women’s Health Sciences Division of the National Center for PTSD, VA Boston Healthcare System and Professor of Psychiatry at Boston University. In 2013, she joined Duke University. Dr. Resick’s specialty is in understanding and treating the effects of traumatic events, particularly posttraumatic stress disorder (PTSD). She developed Cognitive Processing Therapy (CPT) for PTSD, and is currently working on multiple clinical trials. Dr. Resick’s research has been continuously funded for 40 years; she has published more than 300 articles and chapters and 9 books. She has served as President of both the International Society for Traumatic Stress Studies (ISTSS) and Association for Behavioral and Cognitive Therapies (ABCT). She has won research and mentoring awards from ISTSS and ABCT as well as the lifetime achievement award from the Trauma Division (56) of APA.

Addressing the Effects of Trauma in Children, Youth and Families Facing Adversity Globally

Betancourt, Theresa S., ScD MA
Boston College School of Social Work, Chestnut Hill, Massachusetts, USA

To add value to the global evidence base, it’s critical to understand processes shaping risky and resilient life trajectories and intergenerational relationships in populations affected by trauma. Working across cultures, there is a need to attend to cross-cultural measurement issues and collaborative approaches to intervention development. With such efforts, we can move the field forward from longitudinal and observational studies to intervention development and evaluation of impact and urgently then towards implementation science to answer big questions on how to bring evidence-based interventions to new delivery platforms and take them to scale to reach trauma-affected populations. This talk will explore examples from different cultural settings in Sierra Leone, Rwanda and with refugees resettled in the US to capture key issues involved in closing the know-do gap in working with trauma affected populations globally. The talk will focus on participatory and mixed methods research approaches and a strengths-based orientation to addressing the effects of trauma in children, families and communities facing adversity globally. This presentation will explore several exciting innovations in fragile and post-conflict settings, illuminating strategies to ensure quality improvement and sustainment of best practices to promote mental health and life opportunities for children, youth and families affected by trauma globally.

Theresa S. Betancourt is the inaugural Salem Professor in Global Practice at the Boston College School of Social Work and Director of the Research Program on Children and Adversity. She is Principal Investigator of an intergenerational, longitudinal study of war-affected youth in Sierra Leone. Dr. Betancourt has also developed and evaluated the impact of a Family Strengthening Intervention for HIV-affected children and families and is leading the investigation of a home-visiting early childhood development intervention to promote enriched parent-child relationships and prevent violence that can be integrated within poverty reduction/social protection initiatives in Rwanda. In the US, she is engaged in community-based participatory research on family-based prevention of emotional and behavioral problems in refugee children and adolescents resettled in the U.S. through the collaborative development and evaluation of parenting programs led by refugees for refugees that can be linked to prevention services involving refugee community health workers.

5Oasis Africa, Nairobi, Kenya

This featured panel brings to a close the 2019 International Society for Traumatic Stress Studies Annual Conference with a conversation amongst international leaders in the field about their vision for the traumatic stress studies field in the next decade. Panelists include Judith Herman, the pioneering author of the classic volume, Trauma and Recovery, that has guided and inspired thousands of professionals for three decades. From Kenya, Gladys Mwiti is the founder and director of Oasis Africa, working to heal trauma on an individual and societal level in African countries such as Kenya, Benin, and Congo. From Europe, Chérie Armour is an internationally recognized leader in advanced statistical methods for understanding the nature and lifecourse trajectory of traumatic stress. From Australia, ISTSS past-president Alexander McFarlane is a renowned clinician, researcher, and advocate in the area of traumatic stress and is currently the Professor of Psychiatry at The University of Adelaide and Director of its Centre for Traumatic Stress Studies. With the moderation of Julian Ford, the President of ISTSS, this group of distinguished and dedicated traumatic stress professionals will engage in a metalogue on questions such as, What are the most pressing human rights, social justice, and global security challenges to which traumatic stress researchers, clinicians, and educators should bring their expertise over the next decade? What will be the most important advances in assessment and treatment of traumatic stress in the next decade? What will be the most important advances in biological, epidemiological, and public health research and technology? What do traumatic stress professionals most need to learn by listening to and partnering with trauma survivors?

Resilience in Perilous Times: Pathways to the Future
(Global, Dev/Int-Nat/Dis-Refugee-Civil/War, Lifespan, M, Global)

Masten, Ann, PhD
Institute of Child Development, University of Minnesota, Minneapolis, Minnesota, USA

As the threats posed by disasters, toxic stress, and political violence are rising, it is not surprising to observe that international interest in resilience in multiple disciplines is surging. This presentation will describe the current status of resilience science with the goal of framing future efforts to prepare for and mitigate the intertwined risks of mass trauma hazards for individuals, families, communities, and societies. Resilience is the capacity of a system to adapt successfully to challenges that threaten the viability, function, or development of the system. However, that capacity depends on the interplay of an individual system with many others, such that resilience of one key system influences others. Based on her developmental research, Masten will discuss lessons for research and practice in the future based on lessons learned from decades of past research on resilience, particularly focusing on children and families at risk due to severe poverty and mass trauma. Methods and findings from research on human resilience will be highlighted as a roadmap for charting a course forward in a time of historic turbulence. Advances in resilience theory, methods, and applications will be discussed, along with new horizons, enduring challenges, and prospects for integration.

Ann S. Masten, PhD, LP, is a Regents Professor and the Irving B. Harris Professor of Child Development in the Institute of Child Development at the University of Minnesota. She completed her doctoral training at the University of Minnesota in clinical psychology with an internship at UCLA. In 1986, she joined the faculty in the Institute of Child Development at the University of Minnesota, serving as chair of this department from 1999 to 2005. Professor Masten’s research focuses on understanding processes that promote competence and prevent problems in human development, with a focus on resilience in the context of high cumulative risk, adversity and trauma. She directs the Project Competence Research on Risk and Resilience, including studies of normative populations and high-risk young people exposed to war, natural disasters, poverty, homelessness, migration and related adversities. This work includes assessments of risk, stress, adversity, competence, life success, well-being and potential promotive/protective influences involved in resilience. Dr. Masten has authored more than 200 publications, including the 2014 book, Ordinary Magic: Resilience in Children, published by Guilford Press. She recently co-chaired the Forum on Investing in Young Children Globally for the U.S. National Academies, while also serving on their Board on Children, Youth, and Families. She has served as President of the Society for Research in Child Development and President of Division 7 (Developmental) of the American Psychological Association (APA). In 2014, she received the Bronfenbrenner Award for Lifetime Contributions to Developmental Psychology in the Service of Science and Society from APA. Dr. Masten regularly teaches a MOOC through Coursera on “Resilience in Children Exposed to Trauma, Disaster and War: Global Perspectives.”

How Traumatic Stress and Addiction Have Been Together Understood: Charting a Course Forward in Unifying their Research and Treatment
(Clin Res, Chronic-Complex-Sub/Abuse, Adult, M, Industrialized)

Hien, Denise, PhD, ABPP

Rutgers University, Graduate School of Applied and Professional Psychology, Piscataway, New Jersey, USA

Over two decades, clinicians and researchers have become increasingly aware of the significant relationship between early and ongoing trauma exposure, and substance use of all kinds. High rates of traumatic stress exposure in childhood and across the lifespan have been linked to misuse of alcohol and other substances—and for some, the subsequent development of addictive disorders. An overview of affective, cognitive and neurobiological models that have been advanced to understand links between traumatic stress and addiction will be presented. Trauma processing and skill-based techniques have been applied to address PTSD among those struggling with substance use recovery. This talk provides a conceptualization of behavioral and pharmacological approaches that have been developed to concurrently treat traumatic stress and addictions, elucidating metrics for evaluating when our outcomes should be considered clinically significant. The current state of science will be reviewed critically, identifying key implications and highlighting limitations of the existing evidence base of randomized clinical trials, systematic reviews and meta-analyses in order to chart the course forward for the next decades of clinicians and researchers. Current barriers to dissemination of evidence-based trauma treatment models in community substance use treatment will also be discussed.

Denise Hien, PhD, ABPP, is the Director of the Center of Alcohol and Substance Use Studies and Professor in the Graduate School of Applied and Professional Psychology (GSAPP) at Rutgers University-New Brunswick. She also maintains longstanding adjunct appointments as Senior Research Scientist at the Columbia University College of Physicians and Surgeons Division on Substance Use Disorders and Adjunct Professor at the Graduate Center at the City University of New York. She and her group have conducted programmatic research on women’s mental health and addictions, with continuous funding from the National Institute on Drug Abuse and National Institute on Alcoholism and Alcohol Abuse (20 grants total: 7 R01, 1R25, 1 multi-site) for more than 20 years. Considered a leader in the field, her body of work has contributed to the evidence base on the treatment of individuals with trauma-related psychiatric disorders and their comorbidity with addictions through single- and multi-site clinical trials across the United States in community-based substance abuse treatment settings. She also currently leads a NIDA R25 training grant for translational addiction research for racial/ethnic minority BS/MD, MA and PhD candidates in the biomedical and social sciences. She is board-certified in clinical psychology and has served as a standing member of NIDA’s NIH Institutional Review Groups and a health disparities advisory group to the Director on Asian/Pacific Islander issues.

Is Childhood Trauma Decreasing, and If So, Can We Take any Credit?
(Pub Health, CPA-CSA-Death-DV, Child/Adol, I, Global)

Finkelhor, David, PhD
University of New Hampshire, Durham, NH, USA

I will review and try to make sense of trend data showing declines in various forms of child maltreatment, violence exposure, accidents and serious illnesses over the last generation. I will contrast this with less reassuring data about children’s mental health, and the numerous books and articles warning about the increasing stressors and perils of modern childhood. I will also try to situate and evaluate the efforts on behalf of prevention and mental health promotion in the context of other social forces acting on childhood to see if we can draw any encouragement from our efforts.

David Finkelhor is Director of Crimes against Children Research Center, Professor of Sociology and University Professor at the University of New Hampshire. His core areas of interest have been in child maltreatment and family violence, dating back to 1977. He is perhaps best known for his conceptual and empirical work on the problem of child sexual abuse, including prevalence surveys, his Four Pre-conditions Model of Sexual Abuse, and his Four Traumagenic Dynamics Model of sexual abuse trauma. He also helped develop the concept of “poly-victimization.” In addition, he has done extensive research about child homicide, missing and abducted children, bullying and internet victimization. In his recent work, for example his book Child Victimization (Oxford University Press, 2008), he has tried to unify and integrate knowledge about all the diverse forms of child victimization in a field he has termed Developmental Victimology. This book received the Daniel Schneider Child Welfare Book of the Year award in 2009. He has also written extensively about trends in child maltreatment. Altogether he is editor and author of 12 books and more than 200 journal articles and book chapters. He has received grants from the National Institute of Mental Health, the National Center on Child Abuse and Neglect, the U.S. Department of Justice and a variety of other sources. His research and clinical interests are in assessment and basic mechanisms of fear; anxiety and related disorders, chronic pain and the association of these with each other; maladaptive coping; and disability.

The Neglected Belligerent Sibling in the Affect Family:
Advances in the Understanding, Assessment and Treatment of Trauma-Related Anger
(Assess Dx, Aggress-Clinical Practice, Adult, M, Industrialized)

Forbes, David, PhD
Phoenix Australia: Centre for Posttraumatic Mental Health: The University of Melbourne, Carlton, Victoria, Australia, 3053

Anger is a critical but often neglected affect in the assessment and treatment of responses to potentially traumatic events. However, in light of increasing evidence of the importance of anger following trauma exposure generally and in high exposure risk organisations such as military and national security organisations specifically, it can no longer be ignored. Based on growing attention and evidence over several years, the presentation will describe current approaches to understanding anger following trauma exposure; highlight advances in the brief assessment of anger to facilitate its inclusion in routine clinical practice and research; discuss emerging evidence for its role in the development and maintenance of maladaptive and pathological responses to trauma exposure; and consider new directions in approaches to the direct treatment of trauma related anger.

David Forbes is the Director of Phoenix Australia – Centre for Posttraumatic Mental Health and Professor in the Department of Psychiatry at the University of Melbourne. He has more than 25 years of experience in the assessment and treatment of mental health problems in trauma survivors, with a speciality in anger and military and veteran mental health. He led the development of the inaugural 2007 Australian Guidelines for the Treatment of Posttraumatic Stress Disorder (PTSD) and the revision published in 2013. David was also Vice Chair of the International Society for Traumatic Stress Studies Committee for the development of the new PTSD Guidelines. He has a strong track record in the conduct of research in the assessment and treatment of trauma-related mental health, with a particular focus on the measurement of anger, its treatment and its role in moderating the effects of PTSD treatment. He provides policy and service development advice to government and agencies responsible for the care of veteran and military personnel and trauma survivors across Australia. He has published more than 150 scientific papers in the international literature in the area of anger and traumatic stress and sits on many Australian government policy and scientific advisory panels and academic journal editorial boards.

Navigating the Intersection of PTSD and Clinically Significant Pain: Reflections on the Past, Present, and Future
(Practice, Anx-Chronic, Adult, I, Global)

Asmundson, Gordon, PhD
University of Regina, Regina, Saskatchewan, Canada

It is now well established that PTSD and clinically significant pain (i.e., chronic pain, pain-related anxiety, kinesiophobia) frequently co-occur. Co-occurrence of clinically significant pain is often unrecognized and untreated in PTSD treatment settings; yet, when unaddressed, comorbid pain-related concerns can complicate treatment, reduce treatment effectiveness, and exacerbate functional limitations and suffering for patients with PTSD. For several decades now our own empirical and theoretical work as well as that of a growing number of others has been focused on better understanding the intersection of PTSD and clinically significant pain so that the most effective, efficient, and accessible evidence-based treatments can be made available to those who have PTSD and comorbid presentations of clinically significant pain. This talk will begin with a primer on clinically significant pain, provide a broad overview of our initial foray into this line of investigation, summarize our early findings and relevant heuristic models posited to account for co-occurrence of PTSD and clinically significant pain, update current empirical findings, and end with thoughts on future directions.

Gordon J. G. Asmundson, PhD, is a Registered Doctoral Psychologist and Full Professor of Psychology at the University of Regina. He received his doctorate in Psychology from the University of Manitoba in 1991, completed postdoctoral training from 1991-1993, and in 2005-2006 trained as a Beck Scholar at the Beck Institute for Cognitive Therapy and Research. He is Editor-in-Chief of the Journal of Anxiety Disorders, Development Editor of Clinical Psychology Review and serves on the editorial boards for nine other journals. His research and clinical interests are in assessment and basic mechanisms of fear; anxiety and related disorders, chronic pain and the association of these with each other; maladaptive coping; and disability. His pioneering work on fear and avoidance in chronic pain and his shared vulnerability model of co-occurring PTSD and chronic pain have led to significant advances in understanding and treating these prevalent, disabling and costly conditions. Dr. Asmundson has published 325 peer-reviewed journal articles, 70 book chapters and eight books. He is a Fellow of the Royal Society of Canada (2009) and has received the Canadian Psychological Association (CPA) Donald O. Hebb Award for Outstanding Contributions to the Science of Psychology (2014), the CPA Traumatic Stress Section Award for Excellence in Psychology of Traumatic Stress (2018) and the Canadian Pain Society Distinguished Career Award (2018) as well as a number of early career awards.

Globally, more than 65.6 million individuals have been forcibly displaced. Among them, nearly 25.4 million are refugees and half are under the age of 18 (UNHCR, 2017). Despite the diversity in cultures and journeys, traumatic stress, acculturative stress, resettlement difficulties, isolation and discrimination are common challenges faced by forcibly displaced persons resettled in a new country. In this Full Day pre-meeting institute (PMI), our team of trauma-focused clinical psychologists and social workers from the Refugee Trauma and Resilience Center (RTRC), at Boston Children’s Hospital/Harvard Medical School, led by Dr. Heidi Ellis, will provide expert training in evidence-informed strategies for supporting refugee and immigrant youth and families resettled in industrialized countries (with a focus on the United States and Canada). The RTRC is an NCTSN-funded Category II Treatment and Services Adaptation Center and builds upon a 17-year community-based participatory research program focused on promoting the healthy adjustment of refugee and immigrant families resettled in North America. Findings from our studies have been translated into practice, informing the development of both prevention and intervention efforts. This unique training experience will be both didactic and experiential, with ample opportunity for attendees to ask questions, engage in group discussion, participate in experiential activities and role plays, learn concepts through clinical vignettes and common organizational dilemmas, and apply knowledge directly to their current work environment(s). The PMI will be divided into six integrated modules. The first half of the day will be focused on modules 1-3: (1) Introduction to the Refugee and Immigrant Experience; (2) Strategies for Culturally-Responsive Practice; (3) Engaging Refugee and Immigrant Youth and Families in Mental Health Services. Following lunch, the second half of the day is focused on modules 4-6: (4) Psychosocial Assessment with Refugee and Immigrant Youth and Families; (5) Individual- and System-Level Strategies for Working with Refugee and Immigrant Youth and Families; (6) Collaborative and Interdisciplinary Models of Care for Promoting Whole Community Resilience. Attendees will leave this PMI with (1) an enhanced understanding of the current state-of-the-science of refugee/immigrant mental health interventions, (2) an enhanced capacity to make their current clinical work more culturally responsive to the needs of refugee and immigrant communities, and (3) understanding of key components for building effective and sustainable mental health prevention and intervention programs and partnerships with refugee and immigrant communities.

Trauma-Informed Community Empowerment (TICE) is an adaptable, contextualized intervention framework aimed at reducing the impact of trauma by providing skills training in emotion regulation, stress management and conflict resolution to caregivers who offer community support. The program integrates well-established interventions for posttraumatic stress including Psychological First Aid and the Attachment, Regulation, and Competency (ARC) Framework. TICE provides capacity-building support to groups such as refugee camp staff, community leaders and government employees who are doubly at risk because they are themselves trauma-exposed and serving trauma-impacted communities. By working with service providers, TICE ensures that change happens on both systemic and grassroot levels through program assessment, staff support, mentoring, curriculum design, training and supervision in locations such as Kenya, South Sudan, Somalia, Ethiopia, Greece and the United States. GTP’s intervention shows promising outcomes, with significant changes in mental health: a 64% decrease in posttraumatic stress symptoms, 26% decrease in emotional dysregulation and 15% improvement in a physiological indicator of stress.

In this course, presenters will:
1) provide quantitative and qualitative evidence for TICE’s effectiveness, as well as explore factors associated with data gathering in settings with issues of literacy, cultural/ community trauma, and ongoing violence;
2) provide an overview of the Trauma-Informed Community Empowerment (TICE) Framework, and share lessons learned from developing a National Trauma-Healing Initiative in South Sudan; and
3) facilitate exploration of issues of power and privilege relevant to working in under-resourced communities.

Participants will identify strategies for implementing programs that are not only trauma-informed but also community-developed and -owned and gain an appreciation for fostering and maximizing longer-term impacts. Presenters will explore strategies for developing and implementing trauma-informed programs in settings where limited resources, language barriers, cultural differences and societal mistrust of providers create initial barriers to successful implementation. Participants will identify how issues of power and privilege impact effective programming and interventions through reflective practice and real-world examples. Program goals include understanding how to contextualize trauma-informed interventions to maximize success for their use beyond the traditional psychotherapeutic context.

This workshop is appropriate for intermediate levels and for those interested in organizational/program development, community work, peace-building and clinical services.

Trauma-Focused Cognitive-Behavioral Therapy (TF-CBT) is an evidence-based treatment that has been evaluated and refined over the past 25 years to help children and adolescents recover from the negative effects of traumatic experiences. TF-CBT is a components-based model of psychotherapy that addresses the unique needs of children with PTSD symptoms, depression, behavior problems and other difficulties related to trauma (including sexualized behavior, interpersonal trust, self-image, shame, etc.). Numerous randomized trials demonstrate the effectiveness of the model in addressing trauma-related mental health symptoms and impact with children and families. A systematic review by Carey and McMilan (2012) indicated that TF-CBT is more effective than attention control, standard community care, or waitlist control conditions for reducing PTSD, depression and problem behavior symptoms in youth immediately after the termination of treatment and for PTSD 12 months post-intervention. Currently, 21 randomized controlled trials have been conducted in the U.S., Europe, Asia and Africa, comparing TF-CBT to other active treatment conditions and waitlist controls. These studies have documented that TF-CBT was efficacious for improving children’s trauma symptoms and have informed the development of applications of TF-CBT. Various research studies now document that TF-CBT is effective with a range of ages, genders, languages, cultures, treatment settings, caregiving circumstances and trauma types including multiple traumas and complex trauma (Carey & McMilan, 2012; Goldbeck, Muche, Sachser, Tutus, & Rosner, 2016). Two studies have documented positive results of TF-CBT with sex trafficked children in Cambodia and the Congo (O’Callaghan, McMullen, Shannon, Rafferty, and Black, 2013; Bass, Bearup, Bolton, Murray, and Skavenski, 2011). As the research grows, so does the dissemination of TF-CBT to therapists across the world. The combination of growth in empirical research and an increase in community-based providers being trained in the model has led to an influx of implementation applications. These applications support recovery and resilience in some of the most vulnerable underserved populations. The objective of this presentation will be to provide an overview of several key advancements in TF-CBT research in the last two decades, including newly collected data on the implementation of TF-CBT with children and families in Puerto Rico who demonstrate complex trauma symptoms as well as acute symptoms due to Hurricane Maria. This presentation will also provide an overview of targeted treatment applications addressing specific trauma types, populations and cultural contexts including applications for LBGTQ youth, complex trauma, traumatic grief and commercial sexual exploitation/child sex trafficking.

Brief Eclectic Psychotherapy (BEPP) for Complex Trauma and Traumatic Grief

Being overwhelmed by emotions and experiencing loss of meaning hamper complete recovery for PTSD patients. Brief Eclectic Psychotherapy (BEPP) is an effective, comprehensive evidence-based treatment for PTSD. BEPP focuses on working through difficult emotions and grief originating from often multiple trauma. Making meaning of these traumatic experiences, which resulted in the loss of safety and distrust in the world and in one’s own capabilities to go on with life, are central treatment goals. Four randomized controlled trials have proven its efficacy for first responders like police officers and outpatient populations with PTSD (Gersons et al., 2000; Lindauer et al., 2005; Schnyder et al., 2011; Nijdam et al., 2012). Traumatic grief originates from the loss of loved ones by traumatic death due to killings, war, disaster as experienced by most refugees. Based on BEPP, Brief Eclectic Psychotherapy for Traumatic Grief (BEP-TG) helps recovery from traumatic grief. Four different exposure variants can be chosen depending on the symptoms of the patients. Grief-focused exposure may include stimulus exposure if avoidance of grief-related stimuli plays a role in blocking emotional processing. If excessive grieving behaviour is present, diminishing such behaviour is necessary to catalyse the emotional processing of the loss. Finding meaning entails a detailed evaluation of the loss of the loved person and its implications for the future. Writing assignments are useful tools to enable patients to evaluate meanings and to help bereaved individuals to confront painful aspects of the loss. An ongoing farewell letter is also part of this treatment. The BEPP protocol has been translated into English, German, French, Spanish, Italian, Polish, Georgian, Lithuanian, and Korean.

In this PMI, participants will get acquainted with the five components of the BEPP and BEP-TG protocols: psychoeducation, imaginal exposure to the traumatic event, use of writing assignments and mementos, psychodynamic insights in the phase of meaning-making and integration, and a farewell ritual. Special emphasis will be placed on the application and practice of these techniques in the treatment of individuals with complex PTSD characteristics, such as affect dysregulations, negative self-image, dissociative symptoms and problems in sustaining relationships. Fragments of videotaped treatments will be shown. Short interactive exercises and role plays will be used during the PMI to get to know different elements of BEPP and BEP-TG, and data to evaluate the treatments will be presented.

The field of trauma and our understanding of factors impacting recovery and resilience continue to grow and develop. One factor that remains a constant in supporting healing and resilience is positive relationships. As trauma affects the social relationships of the individual, particularly for children and important adults in their lives, creating positive relationships with these adults can significantly aid the healing process. Relationships are critical in prevention and acute and long-term interventions. Strong relationship skills are key principles of evidence-based parenting programs: Parent-Child Interaction Therapy (PCIT), Incredible Years (IY), Helping the Non-compliant Child, Parent-Management Training—Oregon Model (PMTO) and Positive Parenting Program (Triple P). However, these programs require intensive training and treatment. As a result, access to programs designed to improve relationships is lacking. Child-Adult Relationship Enhancement (CARE) was developed to help address this deficiency. Based on the evidenced-based parenting programs, CARE is a trauma-informed set of skills created to enhance relationships and reduce mild/moderate behavior challenges often present after trauma. CARE is for use by any adult interacting with a child/youth. Thus far, CARE has been disseminated to more than 15,000 adults in the United States and has a strong presence in Japan. Evidence is growing, including through randomized controlled trials, for the effectiveness of CARE with different populations and in a variety of settings. Adaptations have been made for the use of CARE in childcare and school settings, in primary and integrated care settings, with foster parents, with military families, and after disasters and terrorist events. CARE has been taught to staff in child protection services, family and drug courts, substance abuse treatment centers, home visiting programs, and domestic violence shelters and to families in these systems. Medical, mental health, allied health professionals and crisis counselors have received CARE training to complement their services, especially to children experiencing trauma. The CARE workshop will teach participants CARE skills they can immediately implement with families they serve. Handouts for use when working with families will be provided. The workshop will include didactic information, videos, activities, and live practice with feedback for the greatest learning potential. Implementation, dissemination efforts, and research will be discussed, helping participants determine how CARE can be useful in their settings, thus improving their efforts as they chart their services to build resilience in families after trauma.

STAIR Narrative Therapy: Using Relational Models to Guide Treatment

STAIR Narrative Therapy is a two-module resource rehabilitation program for survivors of chronic trauma. It focuses on improving emotion regulation and relational capacities through skills strengthening (STAIR) and on reducing trauma-related symptoms through review and meaning-making of traumatic experiences (Narrative Therapy). A key intervention in both modules is the identification and exploration of trauma-generated “relational models.”

Clients’ “relational models” are based on past interpersonal experiences that shape expectations, feelings and behaviors about how relationships work. Influenced by attachment theory, these models are understood as adaptive strategies for maintaining relationships and remaining connected to the social environment even under traumatic circumstances. During STAIR, a review of the client’s relational models includes validation of the functional value of trauma-generated relational models as well as an invitation to generate alternative, aspirational models of relating which are tested and supported by an expanded repertoire of emotion regulation and interpersonal skills. During Narrative Therapy, meaning analyses of trauma narratives include identification of old relational models embedded in the narrative and a comparison of these to new emerging models of self and relationships with others that have been initiated during STAIR. The use of relational models across both modules supports the development of an integrated sense of self (old and new) in the context of an evolving and more positive set of expectations about relationships. This approach is particularly pertinent to individuals emerging from environments in which they have been have stigmatized or marginalized due to their identity, such as LGBTQ individuals and to those who have suffered from institutional or interpersonal betrayal trauma such childhood abuse and military sexual trauma.

The workshop will provide intensive training on the identification and analysis of relational models. It will include several examples of trauma-generated relational models, guidelines for the creation of alternative models, role play opportunities, video demonstrations and analyses of cases from the audience as available.

The Empowering Community Hospices Initiative has put together practical materials to improve the care of terminally ill Vietnam-era Veterans with posttraumatic stress disorder (PTSD) and moral injury especially those Veterans receiving care in the community as delivered by community hospice teams which often lack a dedicated psychologist or training in these areas. This PMI will provide practical strategies the group has created by adapting the existing evidence base on the identification and treatment of PTSD or Moral Injury for a terminally ill population of Veterans, such as those receiving community hospice (e.g., life expectancy on average of about a month) given the limitations of the typical community hospice care team structure which often lacks mental health expertise.

The workshop will:
- Identify best practices and evidence-based interventions, as applied to terminally ill Veterans
- Discuss survey data from 2700 bereaved families of Vietnam era Veterans
- Provide practical, efficient information about caring for Veterans with PTSD and moral injury for family, nurses, chaplains, social workers and clinicians in settings that care for terminally ill Veterans, such as community hospice settings
- Provide guidance for efficient screening and referral of Veterans at risk
- Give references to key resources
- Describe how caregivers can use self-care and peer support to aid them in working with terminally ill Veterans with PTSD and moral injury

Despite existing high quality interventions for traumatized youth, the population of youth experiencing traumarelated distress is extremely heterogeneous, and new approaches and modalities continue to be needed, as not all youth respond to existing treatments. Specifically, youth with experiences of chronic trauma exposure and ongoing adversity may not benefit from processing isolated traumatic events and thus more efforts are needed to help them develop insight, adaptability and personal empowerment in response to complex trauma reactions. Cue-Centered Therapy (CCT) was developed in recognition of the growing need for a manualized treatment to increase youth insight into how an individual’s trauma history may relate to current cognitive, emotional and physiological experiences and how these in turn may be linked to difficulties with behavior and interpersonal functioning. A randomized controlled trial of CCT compared to a wait list group found that CCT was effective in reducing youth posttraumatic symptoms and improving overall functioning as well as reducing caregiver anxiety with treatment gains maintained over time (Carrion et al., 2013). In CCT, youth and their caregivers learn and apply principles of classical conditioning as they explore and identify adaptive responses to trauma cues. CCT includes exploration of youths’ life history of positive and negative experiences, culminating in the processing of chronic stress history and ongoing trauma cues through narrative and gradual exposure techniques. CCT developers will present an overview of the flexible 15-18 session intervention protocol intended for youth ages 8-18 exposed to chronic, ongoing trauma. CCT is intended for youth with a high allostatic load due to trauma exposure and can be used to address multiple trauma types. CCT has been delivered in multiple languages (with manuals currently available in English and Spanish) and has been used in school, clinic and community settings. Trainers will discuss and demonstrate how CCT integrates and builds upon core components of existing trauma interventions. Theoretical concepts, goals and objectives for each phase of CCT will be described and case examples will be used to demonstrate core CCT practices. Existing evidence and an update on ongoing research evaluating CCT will be presented. This interactive workshop will include didactic presentation, group discussion and reflection, and skill practice; attendees will be invited to provide feedback and explore application of CCT with their own patient populations and to engage in discussion of common challenges in the treatment of chronic and ongoing trauma.

Seeking Safety is an evidence-based behavioral model designed for trauma and/or addiction. It is a present-focused coping-skills model that has been widely implemented with numerous populations, including homeless, criminal justice, transition age youth, and seriously mentally ill. This presentation will describe the model briefly and offer a summary of new findings and clinical expansions. Developments include peer-led Seeking Safety, use of the model with adolescents and for gambling disorder, mobile apps related to Seeking Safety, and various language translations and clinical guides. We will also focus on key questions on Seeking Safety including its evidence base and how it compares to other models for PTSD and/or substance abuse. The workshop will be interactive and allow time for audience questions and discussion.

Treating Traumatized Children Who Have Intellectual and Developmental Disabilities:

For over two decades, many children with trauma-related symptoms have been effectively treated with Trauma-Focused Cognitive Behavior Therapy (TF-CBT). The model’s flexibility and applicability to children and families of varying cultures and types of trauma are major strengths. The efficacy of TF-CBT has been demonstrated in more than a dozen randomized controlled trials and across the developmental spectrum for multiple index traumas and settings. Children with intellectual and developmental disabilities (IDD) are an underserved and poorly understood group among mental health clinicians and those who treat traumatic stress. They are exposed to maltreatment, bullying, potentially traumatizing medical and restraint procedures, and other adverse childhood experiences at a rate conservatively estimated to be 2-3 times that of their non-disabled peers. Efforts are underway for adapting TF-CBT to meet the needs of children and caregivers with significant limitations in cognitive, language and other executive functions. As there is a growing evidence base for the effectiveness of cognitive-behavior therapy for anxiety in autism spectrum disorders, this literature is being tapped as a guide for approaching the broader IDD population. The two presenters, one a certified TF-CBT trainer and the other a director of a trauma clinic serving children with IDD, will start with the issue of bias and “diagnostic overshadowing” in the assessment of IDD/Trauma cases, including the importance of child self-reporting and the current state of the literature in this area. They will then present a formal model based on a “matrix” of TF-CBT steps which allows for flexibility within fidelity of the treatment relying on assessments of the child and caregivers: a) verbal comprehension; b) visual-spatial skills; c) sensory differences; d) motivation for treatment; and e) ability to generalize skills learned in therapy. Recommendations for treatment structure, process, and supplemental resources from the IDD/autism literature will be provided. The steps and approach will be illustrated by clinical case examples.

Trauma Informed Guilt Reduction (TIGR):
A Transdiagnostic Therapy for Guilt and Shame from Trauma and Moral Injury

Guilt and shame stemming from one’s actions or inactions during a traumatic event are risk factors for greater severity of subsequent problems such as posttraumatic stress disorder, depression, substance use disorders, and suicidality. Trauma-related guilt and shame are also core components of moral injury. This pre-meeting institute will begin with a review of the presenters’ and extended research showing that guilt and shame from trauma are related to more severe mental health and functional impairment (e.g., Browne, Myers. Trim, R., & Norman, 2015; Norman, Haller, Kim, … Rauch, 2018). We will present a conceptual model (Non-Adaptive Guilt and Shame; NAGS) to explain these relationships (Norman, Wilkins, Myers, & Allard, 2014). We will share psychometrically strong measures for assessing posttraumatic guilt and shame that can be used for treatment planning and to assess progress throughout treatment (e.g., The Trauma Related Guilt Inventory by Kubany et al., 1996 and the Trauma Related Shame Inventory by Øktedalen, et al., 2014). The majority of the PMI will be focused on the Trauma Informed Guilt Reduction (TIGR) therapy protocol (Norman, Allard, Browne, Capone, Davis & Kubany, in press), a six-session cognitive behavioral and acceptance based manualized psychotherapy designed to help trauma survivors accurately appraise posttraumatic guilt and shame and re-engage with important values to aid in recovery from posttraumatic distress. After reviewing completed and in-progress research on TIGR, we will describe the protocol session by session, using in-person instruction, example videos and role plays. How to apply the protocol to a variety of trauma types including combat, sexual assault, and motor vehicle accidents will be described. Finally, we will discuss strategies to address posttraumatic guilt and shame within other treatment models such as Prolonged Exposure and Cognitive Processing Therapy (Norman and Rodgers, 2014).

Recent advances in neuroimaging, biochemistry and genetics research have paved the way for a greater understanding of the neurobiology of trauma and stress. As new technologies and methods are discovered and applied to neurobiological work, it becomes increasingly important for individuals interested in treating and studying PTSD to learn the tools necessary to evaluate the latest research findings. The purpose of this pre-meeting institute is to provide attendees with an introduction to contemporary biological approaches used to study PTSD, including methodological advantages and limitations inherent in these approaches. The target audience includes clinicians, researchers and students with basic knowledge of the biological aspects of traumatic stress. We will review the following topics:

1) Structural and Functional Neuroimaging of PTSD: This talk will provide an overview of how neuroimaging data are collected, processed, and analyzed and the inherent limitations and advantages of neuroimaging methods. Discussion will include an introduction to advanced tools to image neural networks that play a crucial role in the development and maintenance of PTSD.

2) Neuroimaging of PTSD treatment: Recent longitudinal neuroimaging studies have identified predictors for PTSD treatment response. This section will include an overview of brain regions that are related to treatment outcome and will interpret these brain results in the context of trauma-focused therapy. Finally, it will discuss potential implications for novel rain-based (additive) treatments for PTSD.

3) Considering Hormones in PTSD Research: Gonadal hormones have downstream effects on several neurobiological processes implicated in PTSD. Because estrogen and progesterone fluctuate at different phases of the menstrual cycle, scientists often have to make difficult decisions about how to conduct neurobiological research in samples that include premenopausal women. Discussion will include the theoretical importance of this topic as well as practical aspects of measuring menstrual cycle phase.

4) Genetics of PTSD: A mix of genetic and environmental influences determines an individual’s risk of psychiatric disorders such as PTSD. Discussion in this section will include methods used to understand and characterize the genetic determinants of PTSD risk including twin studies, candidate gene studies and genome-wide association studies. Gene expression and epigenetic studies and how they are providing insight into the biological underpinnings of PTSD will also be discussed.
Topical Tracks

The program chairs have grouped presentations on similar themes together into tracks so it is easier for you to find the programs in your area. However, please note that not everything would fit into the tracks. There are more presentations outside the tracks that may be related or of interest and you should check your schedule.

Look for these throughout the meeting schedule:

**Assessment and Diagnosis Track**
Presentations on assessing trauma

**Biological/Medical Track**
Presentations on biological and physical aspects of trauma

**Child Trauma Track**
Presentations on various aspects of trauma in children and adolescents

**Immigrant/Refugee Track**

Population Types

• Child/Adolescent (Child/Adol)
• Adult (Adult)
• Older People/Aging (Older)
• Both Adult and Child/Adolescent (Lifespan)
• Mental-Health Professionals (Prof)
• Other Professionals (Other)

Presentation Level

All presentations designate the knowledge/skill level required of the participant as either: Introductory (I), Intermediate (M) or Advanced (A). These are used as a general guide only since attendees have very diverse educational and professional backgrounds.

Introductory (I): Presentations that all participants (including undergraduate students) with any appropriate background will be able to fully comprehend and/or appreciate. Presentations will discuss concepts that are considered basic skills/knowledge for those working in the field.

Intermediate (M): Presentations that participants may more fully comprehend/appreciate if they have at least some work experience in the topic to be discussed.

Advanced (A): Presentations consisting of concepts requiring a high level of previous educational background, or work experience, in the particular area/topic to be discussed as well as being most geared for specialists and those in advanced stages of their career.

Presentation Type Descriptions*

Case Study Presentation
Sessions use material from a single or a set of cases to illustrate clinical, theoretical or policy issues. These sessions may involve the audience in discussion of the case material presented.

Media Presentation
Session involving presentation of a segment of film, video, music, drama, literature, artwork or other form of media relevant to traumatic stress, along with discussion.

Oral Paper Presentation as “Flash Talks”
An exciting new series of talks: Presenters will be required to describe their study goals, methods and results succinctly, somewhat similar to the format of “TED talks,” keeping to a 5-minute time length and a 10-slide maximum.

Panel Presentation
Sessions that include three to four participants discussing a common theme, issue or question. Panels may include short statements during which panelists outline diverse or similar approaches to the same question. Panels are typically more interactive than symposia, involving active discussion among the panelists.

Poster Presentation
Individual presentation in a poster format on a topic related to traumatic stress, typically including the presentation of research data.

Pre-Meeting Institute (PMI)
Institutes are full- or half-day sessions that provide an opportunity for intensive training on topics integral to the conference program, presented by leaders in the field.

Symposium
Session that includes a group of three to four sequential presentations, each related to the overall theme of the symposium.

Workshop Presentation
Instructional session that helps increase participants’ understanding and skill in a particular area of interest. Such sessions may include active involvement of the audience.

*Presentation types are color-coded throughout the schedule.

Topical Tracks (see complete listings on pages 55 - 65)
The program chairs have grouped presentations on similar themes together into tracks so it is easier for you to find the programs in your area. However, please note that not everything would fit into the tracks. There are more presentations outside the tracks that may be related or of interest and you should check your schedule.

Look for these throughout the meeting schedule:

Assessment and Diagnosis Track
Presentations on assessing trauma

Biological/Medical Track
Presentations on biological and physical aspects of trauma

Child Trauma Track
Presentations on various aspects of trauma in children and adolescents

Immigrant/Refugee Track
Presentations on trauma in immigrant and refugee populations

Military/Veterans Track
Presentations on trauma in military and veteran populations

Public Health Track
Presentations on trauma and public health
