Welcome to the ISTSS 30th Annual Meeting, “Healing Lives and Communities: Addressing the Effects of Childhood Trauma Across the Life Span,” highlighting childhood trauma as an important public health issue that affects individuals, families and communities.

Childhood trauma includes a wide range of potentially traumatizing events, from violence, war and chronic interpersonal trauma such as abuse or neglect to disasters, accidents and medical events. In the last decade, our field has made significant progress in understanding the psychological, social and neurobiological mechanisms involved in the short- and long-term effects of childhood trauma and the mechanisms that promote resilience.

Health and mental health professionals as well as policy makers are increasingly aware of the impact of adverse childhood experiences across the life span. A new global collaboration among ISTSS and other traumatic stress societies has recognized a compelling need to address childhood abuse and neglect and the latent impact of that abuse around the world.

The 30th Annual Meeting features new developments in the field of traumatic stress with a particular emphasis on synthesizing current understanding of the impact of childhood trauma on health and wellbeing across the whole life span. The Meeting also analyzes how families, communities and culture relate to childhood trauma and its effects and provides an opportunity to reflect on how this knowledge informs practice, research and policy.

In collaboration with Sociedad Argentina de Psicotrauma (SAPsi) and Sociedad Española de Psicotraumatología, Estrés Traumático y Disociación (SEPET+D), there is a Spanish track with simultaneous translation Spanish to English and English to Spanish.

There are also tracks focused on specific interest areas including Military, Biology, two Child Trauma tracks, and one for the Long-term Effects of Child Trauma.

We look forward to talking and sharing ideas with you throughout the meeting.

Turning Point provides healing and hope to adults who suffer from behavioral health disorders and/or substance abuse. Our in- and out-patient gender specific programs are ideal for those with co-occurring disorders. Turning Point recently opened a Women’s Trauma Unit. We are Medicare approved, Tricare certified, in-network with most commercial insurances, and able to serve dialysis patients. Located in rural Georgia, we provide a secure and serene environment where patients build a foundation for lifelong recovery.

Special Events/Meetings

ISTSS Special Interest Group Meetings
Thursday, November 6, Noon – 1:15 p.m.
Saturday, November 8, Noon – 1:15 p.m.

Special Interest Groups (SIGs) provide members with a forum for communication and interaction about specific topic areas related to traumatic stress and provides a means of personal and professional involvement in the activities of the society. See page 38 for a listing of specific SIG meetings for each day. All meeting participants are welcome to attend.

Awards Ceremony
Thursday, November 6, 7:15 – 8:00 p.m.
Biscayne, Mezzanine Level

Help us recognize the recipients of this year’s ISTSS awards. Everyone is invited to attend the Awards Ceremony. See a list of 2014 award winners on page 43.

Welcome Reception with SIG Endorsed Poster Presentations
Thursday, November 6, 8:00 – 9:30 p.m.
Grand Ballroom, Mezzanine Level

Join us to welcome attendees to the ISTSS 30th Annual Meeting. A selection of the top posters will be presented, organized by the Special Interest Groups. This will be a great opportunity to talk with SIG Chairs and poster presenters about the outstanding work happening in special interest areas. Enjoy a discussion with presenters while hors d’oeuvres are served alongside a cash bar. See page 141 – 145 for list of posters being presented.

ISTSS Student Lunch Meeting
Friday, November 7, 11:45 a.m. – 1:30 p.m.
Trianon, Mezzanine Level

All student members and nonmembers are invited to attend the student section meeting at the 30th Annual ISTSS conference on Friday, November 7. This lunch meeting provides a great opportunity to meet and network with fellow students and future colleagues, as well as leaders in the field of traumatic stress studies from around the world. The recipients of the three Student Section awards will be announced.

This year’s meeting will feature “SPEED-MEETING” – a format based on the idea of speed-dating. Trauma experts will rotate between tables and provide students with an incredible opportunity to get to know the expert quickly, ask questions and glean wisdom and guidance from those who have successfully journeyed the same paths that students currently travel. It is our hope that students will learn and grow from this mini-mentorship exercise, feel more comfortable approaching trauma experts (and others) at the meeting and generally feel more a part of the ISTSS family. Pre-registered students will receive lunch paid for by ISTSS. The Internship and Postdoctoral Networking Fair will be immediately following this lunch meeting. See you there!

Business Meeting
Friday, November 7, 7:15 – 8:15 p.m.
Biscayne, Mezzanine Level

All meeting participants are invited to attend the Annual Business Meeting. Learn about the Society, ask questions and make suggestions about ISTSS. In addition to meeting ISTSS leadership, student poster awards will be presented and travel grant recipients will be announced.
Membership Information

Join the International Society for Traumatic Stress Studies and become a member of the largest association dedicated to the discovery and dissemination of knowledge about policy, program and treatment initiatives that seek to reduce traumatic stressors and their immediate and long-term consequences. Take advantage of the reduced member registration rate along with all the other benefits of being an ISTSS member.

Join online today using the secure online membership application at www.istss.org.

ISTSS membership includes:
• Peer-reviewed Journal of Traumatic Stress
• Clinician Directory listing
• Discount ISTSS Annual Meeting rate
• Preferred pricing for continuing education courses, webinars and expert trainings
• Traumatic StressPoints e-Newsletter
• Traumatic Stress e-NewsBrief
• Access to Member’s Only Section with searchable membership directory and diagnostic scales
• Discounts on selected publications from Taylor and Francis
• Ability to join Special Interest Groups, Committees and listserv discussions

Your ISTSS membership plays an important role in supporting international trauma research and treatment. ISTSS membership is based on a calendar year — January 1 through December 31 — and dues are not prorated. Applicants joining after October 1 will be paid through the following membership year.

For 2015, regular membership in ISTSS is $225, which includes both print and electronic versions of the Journal of Traumatic Stress (JTS), or $205 which includes the electronic version of JTS only. Early Career Professional membership is $130, which includes both print and electronic versions of JTS, or $110 which includes the electronic version of JTS only. Student membership is $95 which includes both print and electronic versions of JTS, or $75 which includes the electronic version of JTS only.
Internship & Postdoctoral Program Networking Fair

Friday, November 7, 1:45 p.m. – 3:30 p.m., Trianon, Mezzanine Level

Finding an internship or postdoctoral fellowship that features trauma specific training can be difficult. In an attempt to ease this burden, the Student Section of ISTSS offers this session to provide an opportunity for students to talk with representatives of various internship and/or postdoctoral fellowship programs who offer rotations or specializations in the clinical and/or research aspects of working with trauma. The training programs have the opportunity to recruit potential interns and postdoctoral fellows, while students have the opportunity to locate these programs, meet representatives, and ask any questions they have about the experiences offered and the application process.

Programs from across the United States have been invited and these programs represent a diverse set of clinical interests including military and veterans, children, sexual assault populations, prison populations, refugees and the general community.

This networking event is coordinated by Stephanie Wells, Student Section Chair, and Robert McKinney, Student Section Vice Chair.

*If there are sites you would like to see here in the future, please contact the Student Section leadership.

Boston Consortium in Clinical Psychology Internship & VA Boston Healthcare Postdoctoral Fellowship Programs

Location: Boston Massachusetts (Three campuses, two in Boston and the third in Brockton MA, 24 miles south)

Population: Male and female veterans of all ages and all conflicts

Emphasis: The full spectrum of traumatic exposure effects are seen across our clinics. Continuing Education

Educational Need
The ISTSS Annual Meeting provides a forum for sharing research, clinical strategies, public policy concerns and theoretical formulations on trauma. It is an international assembly of professionals and students representing an array of disciplines including psychiatrists, psychologists, social workers, nurses, counselors, researchers, administrators, victim advocates, journalists, clergy and others with an interest in the study and treatment of traumatic stress. Speakers are strongly requested to avoid unnecessary jargon and to make their work and its implication to the traumatic stress field as accessible as possible to those who do not share their particular perspective and type of scientific approach. This is designed to facilitate increased understanding of what different types of researchers (e.g., basic scientists, clinical researchers) focusing on different types of traumatic stressors (e.g., child maltreatment, disasters, terrorism, war) using different research methods and perspectives (e.g., epidemiology, genetics, psychosocial, psychobiological) have found as well as what the implications of their work are for the traumatic stress field. Our aspirational goal is to establish a jargon-free zone in which experts maximize communication of their work, findings and implications in a way that facilitates understanding and cross-fertilization among researchers, clinicians and policy makers from other perspectives.

Conference Goals
Participants of the ISTSS Annual Meeting will be able to:

• Describe childhood trauma and its short- and long-term effects for individuals, families, and communities.

• Discuss various developmental pathways through which childhood trauma may lead to long-term mental and physical health problems.

• Formulate ways to engage individuals, families, and communities to prevent and treat the consequences of childhood trauma.

Continuing Medical Education Accreditation
This activity has been planned and implemented in accordance with the Essential Areas and Policies of the Accreditation Council for Continuing Medical Education (ACCME) through the joint providership of Boston University School of Medicine and the International Society for Traumatic Stress Studies. Boston University School of Medicine is accredited by the ACCME to provide continuing medical education for physicians.

Credit Designation
Boston University School of Medicine designates this live activity for a maximum of 28.5 AMA PRA Category 1 Credits™. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

Note: CME includes author attended poster sessions.

Studies following Sept. 11, the tsunamis and ethnic violence, have highlighted the role of predisposing factors and community experience in traumatic reactions. These findings unmask the impact of the high background levels of mental health vulnerability in populations. There is also evidence that improving community wellbeing significantly decreases the prevalence of mental disorders. This Media Presentation provides data and examples recommending that we should move beyond purely individual approaches to developing large-scale access to populations. Media is a powerful ally for prevention and provides a unique opportunity for limiting the consequences of trauma. When imbedded in communities, co-production opportunities occur contributing to empowerment, social participation, and self-efficacy and ultimately healing. Film viewings will focus on three processes: attending to ongoing background stresses, before threats arise including inoculating the public to adversity; galvanizing, informing and supporting the public during strife; and healing and providing structure for the afflicted after. Material depicting the use of media before, is drawn from the San Francisco Mood Survey, a Dutch docu-drama series and parenting documentaries in Africa, models for action during disaster from the Tube Bombings in London and from Sri Lanka, and healing after from the “The Team” in Kenya.

We will screen parts of the documentary film “WOUNDED PLACES: Confronting Childhood PTSD in America’s Shell-Shocked Cities” prior to the discussion of how film can be used as a tool that educators, providers, advocates, organizers, public officials and others can use to raise public awareness about the causes and consequences of childhood trauma across the life span; investigate trends and components of trauma-informed systems and programs that are successful; and analyze why healing trauma in low-income neighborhoods includes the creation of policies that address and mitigate poverty and racism.

WOUNDED PLACES is produced by California Newsreel, creators of the award-winning films UNNATURAL CAUSES and RACE: THE POWER OF AN ILLUSION, and investigates how so many children in the United States, especially children of color in neighborhoods of concentrated poverty, are exposed to adversity, violence, concentrated poverty, neglect and other risks for trauma and show symptoms similar to PTSD. Applying a trauma-informed approach featuring the work of Sandra Bloom, John Rich, Ted Corbin and others, the film asks not “What’s wrong with you?” but rather, “What happened to you?” and explores how we can help individuals and traumatized neighborhoods heal.

Teicher, Martin, MD, PhD
McLean Hospital, Harvard Medical School, Belmont, Massachusetts, USA

Childhood abuse markedly increases risk for developing PTSD, mood, anxiety, personality, substance abuse and psychotic disorders. Recent studies suggest that clinical sequelae may stem, at least in part, from enduring adverse effects on brain development. What regions are affected, and what consequences ensue may depend on timing, as stress-susceptible brain regions appear to have their own unique sensitive periods when they are most vulnerable to the effects of early stress. Specific sensitive periods will be delineated for the hippocampus, amygdala and cortical regions as well as the types and time frame of abuse most predictive for development of major depression, anxiety and personality disorders. These findings will be placed into context illustrating how childhood abuse affects multiple components of the brain circuit responsible for threat detection and the overall network architecture of the brain. Finally, the case will be made that individuals with histories of substantial childhood maltreatment with DSM psychiatric diagnoses differ clinically and neurobiologically from non-maltreated individuals with the same diagnosis. Recognition of this ecophenotypic distinction may markedly enhance treatment guidelines, further our understanding of developmental trauma disorders and revise our understanding of the biological basis of psychopathology.

Dr. Teicher’s research programs are designed to improve the life of children, adolescents and adults by exploring the etiology and treatment of psychiatric disorders that arise during development. A major focus of his work is on the effects of childhood traumatic stress and he pioneered studies into the effects of abuse on brain development. Another focus has been on the use of technology to aid in objective psychiatric diagnosis. Dr. Teicher received a PhD in psychology from The Johns Hopkins University, MD from Yale and residency training in psychiatry at Harvard. He is the director of the Developmental Biopsychiatry Research Program at McLean Hospital and an associate professor of psychiatry at Harvard Medical School. Dr. Teicher has served on the editorial board of the Journal of Child and Adolescent Psychopharmacology since its inception and he is the child and adolescent psychiatry section editor for BMC Psychiatry. He has received continuous funding from the National Institute of Health over the last 26 years. He is currently funded by investigator initiated (RO1) awards from the National Institute of Mental Health and the National Institute on Drug Abuse. Dr. Teicher has been a committee member of the Neurochemistry and Neuropharmacology Study Section, the Small Business Innovative Research Study Section, and Neuroscience Fellowship Review Committee at the National Institute of Health. He is the author of more than 200 articles in the scientific literature and holds 17 U.S. patents primarily for diagnostic technology and pharmaceutical agents.

“This is My Story, I Am!”
Facing Childhood Trauma within the Individual and the Community

**“Esta es mi Historia, Yo Soy!”
Abordar Trauma Infantil Dentro de la Persona y la Comunidad**

Schauer, Maggie, PhD
University of Konstanz & vivo international, Konstanz, Germany

Childhood trauma is not just traceable to a single event in a young life, but reorganizes a heritage that has been shaped by stressful experiences of ancestors. The individual memories combine with those that are passed on across generations: through communal culture, by parenting style, and as epigenetically transmitted experiences, which cause an unfavorable impact on the DNA-methylation status of children. Emotional neglect, abuse and inconsistent parenting by stressed caregivers, play a key role in lifelong mental health complications, health risk behavior and disease in the parents of tomorrow who are raised in burdened families or under continuous trauma conditions, prone to pile up building blocks for mental disease. Given the high prevalence globally, of familial, sexual, organized violence and of relational victimization, a paradigm-shift prioritizing evidence-based short-term treatments that are low-threshold and disseminable is needed, in order to face a multitude of social relational pain and violent trauma. To heal individuals and communities a cascade model of trauma-focused care, including biographical approaches of narrative in-sensu exposure and testifying to human rights violations, will deactivate the transgenerational transmission and lead to enhanced functionality and health.

Dr. Schauer is the director of the Center of Excellence for Psychotraumatology at the University of Konstanz, Germany and has achievements in both research and clinical settings for her work with survivors of severe traumatic stress. Dr. Schauer is a founding board member of vivo (www.vivo.org), an alliance that works to overcome and prevent traumatic stress and its consequences within the individual, the family, and the community, safeguarding the rights and dignity of people affected by violence and conflict. She works as an advisor for NGOs, UN, World Bank, IOM and other governmental organizations on sexual and gender-based violence projects establishing psychosocial care and mental health services for victims, child soldiers and ex-combatants in different contexts of war and crisis.

Dr. Schauer’s focus includes the trans-generational impact of life stress, prenatal assessment of psychosocial risk factors for development, as well as early childhood abuse and neglect. Along with understanding behavioral and epigenetic transmission patterns, she aims towards establishing evidence-based practice for the protection of infants and young children from adverse consequences of stress and trauma. This practice includes the formation and research on the effectiveness of inter-collaborative networks of pediatricians, family nurses, midwives, gynecologists, social welfare in early outreach and preventative treatments to at-risk mums and their babies.

Additionally, Dr. Schauer has extensive experience working with victims of war, genocide and torture within countries in the aftermath of organized violence such as Kosovo, Romania, Sri Lanka and countries in East Africa. Together with Thomas Elbert and Frank Neuner she took the lead in developing Narrative Exposure Therapy (NET), a treatment for survivors of multiple and complex trauma following experiences of severe forms of violence and disaster, as well as developmental trauma including childhood sexual abuse and maltreatment. In NET, the patient, with the assistance of the therapist, constructs a chronological narrative of her/his life story with an exposure focus on the traumatic events, modifying the emotional networks, regaining of the survivor’s dignity and allowing for corrective relationship experiences when reprocessing the entire life. Fragmented reports are integrated meaningfully and transformed into a coherent biographical narrative, complemented by a testimony. NET, a well-tolerated and straightforward yet robust approach, is easy to teach to non-expert practitioners, has proven efficacy not only in low-income, resource poor contexts of continuous traumatic stress, but also in western in- and outpatient clinical settings for trauma spectrum and borderline personality disorder.

Pioneers in Child Trauma: Lessons Learned and Future Directions
*Pioneros en el Campo de Trauma Infantil: Enseñanzas Extraídas y Orientación Futura

In this moderated panel, distinguished pioneers in childhood trauma representing Latin America, Europe and the U.S. will reflect on their experiences and their clinical work and research with different populations of traumatized children over the last 30 years. With their work among children exposed to maltreatment, violence, disaster, and war, the panelists have all contributed in a crucial way to the development of our current knowledge on the understanding, impact, and treatment of trauma that occurs in childhood. What are the lessons learned from the past and how can the experiences of these pioneers inform future work with traumatized children? The panel will also discuss current challenges for our field and how we might overcome them.

The Effects of Complex Developmental Trauma across the Lifespan: Professional Recognition, Training, and Intervention

Dr. Courtois is a board certified counseling psychologist in independent practice in Washington, DC and National Clinical Training Consultant for Elements Behavioral Health/Promises, California. She received her PhD from the University of Maryland, College Park. Dr. Courtois recently published, Treating Complex Trauma in Children and Adolescents co-edited with Dr. Julian Ford; The Treatment of Complex Trauma: A Sequenced, Relationship-Based Approach (2013) co-authored with Dr. Ford; a revision of Healing the Incest Wound: Adult Survivors in Therapy (2010); and Treating Complex Traumatic Stress Disorders: An Evidence-Based Guide (2009) co-edited with Dr. Ford. She recently completed co-editing (with Drs. Donald Walker and Jamie Aten) a book on spiritually-oriented trauma treatment to be published in 2014. Dr. Courtois is the appointed chair of the American Psychological Association’s PTSD Guideline Development Panel and has organized the development of guidelines for the treatment of complex trauma for three professional organizations. She is a past president of Division 56 (Psychological Trauma) of the APA and a founding associate editor of the Division’s journal, Psychological Trauma: Theory, Research, Practice, & Policy. In 1990, she co-founded (with Joan Turkus, MD) The Center: Posttraumatic Disorders Program, Washington, DC, one of the first inpatient trauma programs in the USA, where she served as clinical and training director for 16 years.

The array of aftereffects of complex developmental trauma in childhood and its potential impact across the lifespan are now well-documented, with the effects of such trauma increasingly recognized as a public health issue of major proportions. Its impact is felt at individual, family, community, and societal levels. Despite this, the significance of such trauma and its relation to clients’ development, presenting concerns and symptoms are often missed or minimized by clinicians and therefore not targeted for treatment. Possible reasons for this include lack of attention to trauma and its impact in professional training across disciplines. Treatment and practice guidelines, a meta-model for the treatment of complex trauma, and trauma treatment competencies will be discussed.

Kolko, David J., PhD, ABPP
University of Pittsburgh School of Medicine, USA

Delivering effective clinical services to emotionally or physically maltreating/aggressive caregivers and their children is a personal and clinical challenge. This workshop will discuss how Alternatives for Families - A Cognitive Behavioral Therapy (AF-CBT; www.afcbt.org) works with caregivers and children whose interactions include the use of coercion and force. Participants will first receive background information about this model, including its focus, scope, underpinnings, and level of empirical support. Participants will then be given an overview of eligibility criteria, sample assessment tools, fundamental skills, engagement methods, and key topical content in the three treatment phases of AF-CBT. A case example will be presented to illustrate the application of these procedures and to highlight some of the therapeutic issues that may occur during treatment, such as concerns about family safety. Some recommendations for maintaining communication with the child welfare system and for monitoring family progress will be presented. Participants will be invited to raise questions and be provided with information about upcoming training opportunities.

Dr. Kolko is a professor of psychiatry, psychology, pediatrics, and clinical and translational science, at the University of Pittsburgh School of Medicine. He is director of the Special Services Unit at Western Psychiatric Institute and Clinic, a program devoted to the development and dissemination of evidence-based practices (EBP) for children/adolescents served in diverse community settings or systems including juvenile justice, child welfare, pediatric primary care, and mental health. He is board certified in child and adolescent psychology by the American Board of Professional Psychology and is a fellow of Divisions 37 and 53 of the American Psychological Association. Dr. Kolko served two terms on the board of directors of APSAC, was co-chair of its research committee, and received its Research Career Achievement Award for 2001. Much of his current work promotes training in and the implementation of “Alternatives for Families: A Cognitive Behavioral Therapy” (AF-CBT; www.afcbt.org), an EBP that has been adapted for family conflict and coercion, emotional and physical abuse, and child behavior problems. His treatment research interests include the study and treatment of disruptive behavior disorders and children’s antisocial behavior, including childhood firesetting, adolescent sexual offending behavior, and child maltreatment/trauma, and the integration of behavioral health services in pediatric primary care and family health centers.

This presentation will present the theoretical premises and evidence base for child-parent psychotherapy, a multi-theoretical treatment for infants, toddlers and preschoolers exposed to traumatic stressors and multiple adversities. Examples that illustrate the integration of adherence to fidelity measures with an individualized approach to the clinical needs of children and families from different cultural backgrounds will be discussed in the context of clinical vignettes.

Dr. Lieberman is Irving Harris Endowed Chair in Infant Mental Health, professor and vice chair at the UCSF department of psychiatry. She is the director of the Early Trauma Treatment Network, a center of the SAMHSA-funded National Child Traumatic Stress Network. Dr. Lieberman received her undergraduate training at the Hebrew University of Jerusalem, her PhD from The Johns Hopkins University under the mentorship of Mary Ainsworth, and her post-doctoral training at the University of Michigan Ann Arbor with Selma Fraiberg. She is a member of the board of directors of Zero to Three: National Center for Infants, Toddlers and Families and on the board of trustees of the Irving Harris Foundation. She is the developer of child-parent psychotherapy, an evidence-based treatment for traumatized young children and their families. She is the author of several books and numerous articles and chapters on early childhood mental health. Her areas of special interest involve closing the gap in access to state-of-the-art treatment for traumatized young children and their families, developing and disseminating culturally informed treatment, and building capacity by training clinicians from underserved cultural minority groups in early childhood intervention and treatment.

Latent Variable Modeling of Longitudinal Data with Applications to Trauma Research

*Metodólogo Experto: Modelos de Variables Latentes con Datos Longitudinales - Aplicaciones a la Investigación del Trauma

Dr. Llabre is a professor of psychology and the director of biobehavioral statistics at the Behavioral Medicine Research Center at the University of Miami, Coral Gables, FL. Her expertise is in quantitative methodology, which she has applied to the design and analysis of numerous collaborative research projects in behavioral medicine for the past 30 years. Her interests include applications of latent variable models to address questions about measurement, mechanisms, and change processes in cardiovascular behavioral medicine. She has extensive experience teaching statistics and research methods at the graduate level and has been the recipient of numerous awards for her teaching. She has worked in the Middle East studying the consequences of war-exposure on children’s psychological and physical health. Currently, she is involved in the Hispanic Community Health Study/Study of Latinos (HCHS/SOL), the largest epidemiological study of Latino health in the USA. Dr. Llabre has been the Statistics Editor for the journal, Psychosomatic Medicine: Journal of Biobehavioral Medicine since 2005. She chairs the American Psychological Association’s panel to develop guidelines for the treatment of obesity. She is a Fellow of the American Psychological Association, the Society of Behavioral Medicine, and the Academy of Behavioral Medicine Research.

Applications of latent variable modeling (LVM) are becoming more frequent with the availability of efficient software. Importantly, many research questions and challenges in the area of stress and trauma can potentially benefit from careful applications of LVM. Experimental and/or observational longitudinal studies designed to understand the process of change over time map well onto a variety of latent growth models and are able to accommodate common measurement and missing data problems. This invited lecture will review LVM in the context of longitudinal designs and illustrate their features, advantages and limitations using real and simulated examples.

Introduction to Dyadic Data Analysis

Laurenceau, Jean-Philippe, PhD
University of Delaware, Newark, Delaware, USA

This workshop will introduce participants to answering research questions involving cross-sectional and longitudinal dyadic data. These data present data-analytic challenges stemming from their various sources of interdependence. Not only is there non-independence between members of the dyad, but in the longitudinal context there is also non-independence of repeated observations within each dyad member. Path modeling and multilevel modeling are flexible analytic tools that can accommodate these complexities. The workshop will begin by considering the core features of a dyadic design and the resulting dyadic data. It will then cover Kenny’s Actor-Partner Interdependence Model for cross-sectional dyadic data as well as extensions to two-wave panel data. The focus then shifts to the analysis of repeated measure dyadic data using both growth curve models and (time permitting) multilevel process models that capture within-couple correlated errors. Example code from SPSS and Mplus will be provided and example data will focus on trauma-related variables assessed on dyads.

Dr. Laurenceau is a professor of psychology at the University of Delaware. He graduated cum laude with a BA in psychology from Cornell University and received his MA and PhD from The Pennsylvania State University. His research interests focus on understanding the processes by which partners in marital and romantic relationships develop and maintain intimacy within the context of everyday life. Dr. Laurenceau’s methodological interests include intensive longitudinal methods for studying close relationship processes and applications of modern methods for the analysis of change in individuals and dyads. He received an NIH K01 Scientist Development Award where to obtain experience in the collection and analysis of intensive dyadic longitudinal data and is co-author of the book, Intensive Longitudinal Methods: An Introduction to Diary and Experience Sampling Research (2013; Guilford Press). He is an appointed member of the Social, Personality, and Interpersonal Processes Grant Review Panel of the National Institutes of Health. Dr. Laurenceau has been principal investigator or co-investigator on research projects funded by the National Institute of Mental Health, National Institute of Child Health and Human Development, and the National Cancer Institute. He is currently collecting and analyzing dyadic data from couples coping with cancer as part of a federally-funded intensive longitudinal project.

In this panel, five pioneers who have developed empirically supported psychotherapies for trauma-related disorders will engage in a conversation about the nature of trauma recovery. Marylène Cloitre (STAIR Narrative Therapy), Thomas Elbert (Narrative Exposure Therapy), Berthold Gersons (Brief Eclectic Psychotherapy for PTSD), Patricia Resick (Cognitive Processing Therapy), and Francine Shapiro (EMDR Therapy) will explain how they combine psychoeducation, exposure, and cognitive treatment elements. The discussion will focus specifically on adults who had been exposed to childhood trauma, and are suffering from comorbid conditions such as depression, substance abuse, or personality disorders, in addition to PTSD. The panelists will be asked in which way the improvement of emotion regulation skills and the promotion of resilience are addressed in their respective approaches. It is expected that many commonalities will emerge. However, differences will also be identified, e.g., emphasis on fear versus other negative emotions and cognitions, homework assignments, the creation of a consistent narrative. Based on the strengths and weaknesses of trauma treatment to date, the panelists will explore the mechanisms of action that they share. Finally, they will suggest solutions for unresolved problems such as residual symptoms, ongoing impairments in psychosocial functioning, or relapse.

Exposure to trauma is pervasive in societies worldwide and refers to a range of events including interpersonal violence, rape, natural disasters, terrorist attacks, and both civilian and military war-related experiences. The burden of trauma exposure includes increased likelihood of PTSD and comorbid psychiatric problems, as well as physical problems resulting directly from the trauma and chronic health conditions secondary to psychiatric problems. Impaired role function, reduced life course opportunities, and premature mortality all contribute to the public health burden of trauma. Because PTSD is conditional on trauma exposure, it may be one of the most preventable of mental disorders. The public health model of trauma emphasizes the individual, the environmental and societal context, and the traumatic event itself. These three aspects offer opportunities for prevention at multiple levels. Furthermore, the public health approach highlights the importance of effective public policies based in evidence for protecting people and communities. This panel will summarize a report of the ISTSS Trauma and Public Health Task Force emphasizing the public health burden of trauma exposure, the public health model and prevention opportunities, the role of public health policies, and opportunities for ISTSS to maximize its societal impact in addressing trauma as a public health issue.

A core feature of ethical clinical practice is that the services delivered are efficient in improving health and that they do not harm the patient. In addition, if potentially distressing procedures are used the benefits must outweigh the costs. It is a common and understandable concern among mental health clinicians and administrators that screening for a history of potentially traumatic events and symptoms of traumatic stress as part of a standard assessment may be overly distressing or even traumatic for clients. In this symposium these concerns will be addressed and four researchers will look at the costs and benefits of screening for trauma and assessing trauma symptoms in different populations. The first study looked at what clinicians in a Swedish child clinic thought of screening for interpersonal violence at intake, and the second study investigated what children and parents thought about being assessed for trauma symptoms in regular clinics in Norway. The third study took a look at how youth reacted after participating in a national victimization study in the US, and finally we will learn what adult VA patients that were part of a clinical study thought of the assessment process. Clinical implications will be discussed.

Disasters and terrorist attacks are public events, and generate interest from researchers across academic disciplines. The research community is faced with a variety of ethical challenges when conducting research that involves survivors and the bereaved after disasters and terrorist attacks. Chris Brewin, Mark Creamer, Carol North, and Nils Olav Refsdal will share their experiences in meeting research challenges when studying such incidents as the 2005 London Bombing, 9/11 World Trade Center, Oklahoma Murray bombing and the 2011 bombing and mass shooting in Norway. The panelists will present and discuss steps taken to attain new knowledge while protecting potentially traumatized individuals from being overwhelmed by the multitudes of researchers wanting to use them as subjects. Topics that will be examined recruitment strategies, informed consent, managing confidentiality issues and weighing the potential risks and benefits of participating in research. Different ways of involving funding agencies, review boards and stakeholders will also be discussed. The panelists will highlight practical measures that have worked well in different contexts. Through the discussion, we aim to raise awareness of these issues and help researchers solve ethical issues in future disasters across the globe.

*Invited Speaker: Buenas Prácticas en Casos de Maltrato Infantil: La Importancia de Incluir el Enfoque del Trauma en el Marco de Intervención

(Intebi, Irene, MD
Private Practice, Buenos Aires, Argentina

El maltrato infantil constituye un problema sanitario y una vulneración de derechos que requiere intervenciones interdisciplinarias, multimodales e intersectoriales.

En la mayoría de las países latinoamericanos las políticas públicas enfocan el problema priorizando la vulneración de derechos, dejando en un segundo plano los programas de intervención y tratamiento para la reparación de los efectos del trauma crónico.

Se describirán los beneficios de considerar los efectos traumáticos en las víctimas de malos tratos a niños/as y adolescentes a la hora de diseñar e implementar estrategias eficaces de intervención que incluyan tanto desde la perspectiva de vulneración de los Derechos del Niño/a y Adolescente como de los tres niveles de prevención de la Salud Pública.

Se considerarán las intervenciones psicoterapéuticas específicas dirigidas a reparar las consecuencias traumáticas así como otras prácticas socioeducativas implementadas por todos/as los/as profesionales que trabajan con niños/as y adolescentes tendientes a fomentar la resiliencia.

La presente ponencia será de interés para aquellos/as que realizan una práctica psicoterapéutica clínica y también para educadores/as, trabajadores/as sociales, personal del sistema judicial, personal de las fuerzas públicas, planificadores/as y/o ejecutores/as de políticas públicas y profesionales de los medios de comunicación.

*Presented in Spanish with simultaneous translation to English

Best Practices in Child Abuse Cases: The Importance of Including a Trauma Focus in the Intervention Framework

Child abuse is both a public health concern and a right violation issue that needs to be addressed by an interdisciplinary, multimodal and intersectoral approach.

Most Latin American countries governments prioritize the right violation perspective in their public policies, paying less (or even little) attention to the need to create intervention and treatment programs to address the effects of chronic trauma.

This presentation describes the advantage of focusing on the effects of trauma on abused children and adolescents when planning and implementing efficient intervention strategies considering the problem both as a violation of the Convention on the Rights of the Child (CRC) and a public health issue that merits a 3-level prevention approach.

Specific psychotherapeutic interventions aimed at healing traumatic effects of abuse and other socio-educative interventions used by different disciplines working with children and adolescents aimed at strengthening resilience will be discussed.

This presentation is of interest for psychotherapists, educational psychologists, doctors, social workers, teachers, lawyers, legal system and law enforcement personnel, policy decision makers and designers, and media professionals.

Using Film as a Tool for Understanding and Overcoming Grief & Traumatic Loss

If there is one universal experience all human beings share, it is the experience of loss. Whether resulting from a disaster of epic proportions or from events at a more local or personal level, the need to face life’s greatest challenges with personal resilience and strong community support is common to all. Yet so many people deny their own suffering and take the daunting journey through grief and trauma alone, feeling isolated and ashamed of their inability to feel whole and move on. Our workshop presenters propose to share Project Rebirth’s unique film content with conference participants in order to capture how a few individuals demonstrate resilience in the face of adversity. These films comprise the longest and most complete video record of human beings journeying through grief and trauma. They follow 9 individuals who suffered terrible losses on September 11, 2001. Conference participants will watch them battle grief, injury and post-traumatic stress over the course of several years. These films are now used in programs that empower viewers to confront and better understand their own battles with trauma and grief and to develop greater resilience for the future. Presenters Helen Rafferty (executive director, Project Rebirth) and Bill Keegan (executive director, HEART 9/11) will share their experiences healing communities affected by disasters or traumatizing conditions.

“Staying Strong: How Schools Build Resilience in Military Families” is a 26-minute documentary that portrays the life experience of the children in two military families, and the exemplary efforts of their school community to protect the emotional health of these students and their families, throughout the stresses of deployment and reintegration. This film covers specific resilience-building classroom practices and promotes the model of school-based resilience promotion team, with advocacy and support from the principal and superintendent. We have presented the film to 196 educators from 13 civilian elementary schools in 2012. Surveys (n=163) showed promising results including significant pre-post increase in understanding the family stresses associated with a parental deployment (54.6% vs. 95.7%, p<0.001), and in ability to initiate a conversation with a military connected parent regarding concerns about their child while the other parent is deployed (68.7% vs. 97.6%, p<0.001). In addition, educators also reported increased preparedness to implement specific activities in their classroom to promote resilience among military-connected children (41.7% vs. 87.1%, p<0.01). The film is free online (www.stayingstrong.org), and is now a component of a larger resilience intervention targeting military-connected children currently being developed and tested.
**ISTSS Special Interest Groups**

Special Interest Groups (SIGs) provide members with a forum for communication and interaction about specific topics related to traumatic stress and provide a means of personal and professional involvement in the activities of the society. All meeting participants are welcome to attend SIG meetings.

Back to Basics: Integrating Clinical and Scientific Knowledge to Advance the Field of Trauma

November 5 – 7, 2015 | Pre-Meeting Institutes, November 4
New Orleans Marriott, New Orleans, Louisiana, USA
www.istss.org
Presentation Type Descriptions

- **Case Study Presentation**
  Sessions use material from a single or a set of cases to illustrate clinical, theoretical or policy issues. These sessions may involve the audience in discussion of the case material presented.

- **Media Presentation**
  Session involving presentation of a segment of film, video, music, drama, literature, artwork or other form of media relevant to traumatic stress, along with discussion.

- **Oral Paper Presentation**
  Individual presentations of no more than 15 minutes on a topic related to traumatic stress, typically including the presentation of research data.

- **Panel Presentation**
  Sessions that include three to four participants discussing a common theme, issue or question. Panels may include short statements during which panelists outline diverse or similar approaches to the same question. Panels are typically more interactive than symposia, involving active discussion among the panelists.

- **Poster Presentation**
  Individual presentation in a poster format on a topic related to traumatic stress, typically including the presentation of research data.

- **Pre-Meeting Institute (PMI)**
  Institutes are full- or half-day sessions that provide an opportunity for intensive training on topics integral to the conference program, presented by leaders in the field.

- **Symposium**
  Session that includes a group of 3 to 4 sequential presentations, each related to the overall theme of the symposium.

- **Workshop Presentation**
  Instructional session that helps increase participants’ understanding and skill in a particular area of interest. Such sessions may include active involvement of the audience.

ISTSS Topical Tracks

**NEW THIS YEAR:** The Program Chairs have grouped presentations on similar themes together into tracks so it is easier for you to find the programs in your area. Each track is assigned to its own room, so if you decide to follow that topic, you know where to go. However, please note that not everything would fit into the tracks so there are more presentations outside the tracks that may be related and you should check your schedule.

Look for these throughout the meeting schedule in the left column

- † **Spanish Track in Chopin**
  There will be presentations in both English with simultaneous translation to Spanish and in Spanish with simultaneous translation to English.

- ◊ **Biology Track in Biscayne**
  Presentations on biological and physical aspects of trauma

- ! **Child Track One in Bayfront A**
  Presentations on various aspects of trauma in children and adolescents

- !! **Child Track Two in Bayfront B**
  Presentations on various aspects of trauma in children and adolescents

- ◊ **Long-Term Effects of Child Trauma Track in Sevilla**
  Presentations on the long-term effects of childhood trauma

- † **Military Track In Brickell**

Presentation Level

All presentations designate the knowledge/skill level required of the participant as either: Introductory (I), Intermediate (M) or Advanced (A). These are used as a general guide only since attendees have very diverse educational and professional backgrounds.

**Introductory (I):** Presentations that all participants (including undergraduate students) with any appropriate background will be able to fully comprehend and/or appreciate. Presentations will discuss concepts that are considered basic skills/knowledge for those working in the field.

**Intermediate (M):** Presentations that participants may more fully comprehend/appreciate if they have at least some work experience in the topic to be discussed.

**Advanced (A):** Presentations consisting of concepts requiring a high-level of previous educational background, or work experience, in the particular area/topic to be discussed as well as being most geared for specialists and those in advanced stages of their career.

Simultaneous Translation for the Spanish Track in Chopin

Throughout the meeting, simultaneous translation will be available for the sessions in Chopin. Note on the schedule the language of the presentation. When the presentation is in English, use one of the available headsets for the Spanish translation. When the presentation is in Spanish, use one of the available headsets for the English translation.

Poster Presentation – Session 1

Author Attended Presentations
Thursday, November 6,
6:00 p.m. – 7:00 p.m.
Mezzanine East/West/South

Poster Organization
Each poster is scheduled for either Author Attended Poster Session One on Thursday, the Featured Poster Presentations at the Welcome Reception, or Author Attended Poster Session Two on Friday and includes a one-hour time period when the presenting author is available to answer questions.

Posters are organized in the conference program by poster number on each day. The presenting author is bolded. In addition, the author’s index provided at the end of the conference program includes all of the authors. A floor map showing the layout of posters is available in the poster hall and on page 116.

Key:
Poster # Number (Primary keyword, Secondary Keywords, Population type) Presentation Level – Region
Keyword type descriptions can be found on page 45.
