Leading Practitioners Recommend Global PTSD Treatment Guidelines

Melbourne, Australia—September 28, 2010— In recent years, several guidelines in the treatment of posttraumatic stress disorder have been put into practice globally. Practice guidelines across the health sphere are very important in guiding the care people receive. Although there is a high level of consensus on these guidelines among practitioners, there are also differences that can lead to confusion among providers, patients, and purchasers of mental health services for people affected by trauma. A new article in *[Journal of Traumatic Stress](#)* written by the international leaders in PTSD treatment, compares and contrasts the various guidelines, and explain the reasons for the differences.

Lead author Dr. David Forbes, “We want our treatments to be based on the best available research evidence. Several guidelines have been published around the world that describe best practice interventions for people who have developed posttraumatic stress disorder. While there is some consistency across these guidelines, there are also important points of difference. This can be confusing for those using the guidelines, whether they are clinicians, people affected by trauma, or service planners such as government. It is sometimes hard for them to understand why these guidelines differ and which of the recommendations are most appropriate for their requirements.”

This paper reports on the existing treatment research, pulling together and explaining previous reviews. This research will help clinicians make decisions as to which guidelines are most relevant for their work and, where there is disagreement, which recommendations to follow. The paper emphasizes the international consensus that trauma focused psychological interventions are the most effective treatments of choice for posttraumatic stress disorder.

Ultimately, a better understanding of the best way to treat PTSD will help to reduce confusion in relation to differences in these guidelines, and ensure that survivors of trauma receive the best possible care.

This study will be published in a forthcoming issue of the *[Journal of Traumatic Stress](#)*. Media wishing to receive a PDF of this article may contact scholarlynews@wiley.com.

David Forbes, PhD, is Associate Professor of Psychiatry at the University of Melbourne and the Deputy Director of the Australian Centre for Posttraumatic Mental Health. He has also worked as the Chair of the working party for the Australian clinical practice guidelines for the treatment of adults with posttraumatic stress disorder. He can be reached for questions at dforbes@unimelb.edu.au.

The Journal of Traumatic Stress (JTS), the official publication for the International Society for Traumatic Stress Studies, is an interdisciplinary forum for the publication of peer-reviewed original papers on biopsychosocial aspects of trauma. Papers focus on theoretical formulations, research, treatment, prevention education/training, and legal and policy concerns. *Journal of Traumatic Stress* serves as a primary reference for professionals who study and treat people exposed to highly stressful and traumatic events (directly or through their occupational roles), such as war, disaster, accident, violence or abuse (criminal or familial), hostage-taking, or life-threatening illness. The journal publishes original articles, brief reports, review papers, commentaries, and, from time to time, special issues devoted to a single topic.

About Wiley-Blackwell: Wiley-Blackwell is the international scientific, technical, medical, and scholarly publishing business of John Wiley & Sons, with strengths in every major academic and professional field and partnerships with many of the world's leading societies. Wiley-Blackwell publishes nearly 1,500 peer-reviewed journals and 1,500+ new books annually in print and online, as well as databases, major reference works and laboratory protocols. For more information, please visit www.wileyblackwell.com or our new online platform, Wiley Online Library (wileyonlinelibrary.com), one of the world's most extensive multidisciplinary collections of online resources, covering life, health, social and physical sciences, and humanities.
