Welcome

Welcome to the International Society for Traumatic Stress Studies 33rd Annual Meeting, “Trauma and Complexity: From Self to Cells.”

Traumatic life events exert effects that can be anything but simple. Such complexity is evident in the interaction between traumatic event characteristics (e.g., different kinds of trauma exposure; military vs. civilian, sexual vs. non-sexual) and person characteristics (e.g., sex, age, ethnicity, sexual orientation). Complexity is further revealed by the fact that trauma affects not only specific individuals, but the social relationships within which they are embedded, including intimate partners, peers, and family members through to larger communities, countries and cultures. Trauma also can be understood as a complex temporal process that unfolds over multiple timescales, including over the course of a single event, developmental period, lifetime course, and period in history. Finally, as implied by the meeting subtitle, the experience and outcomes of traumatic stress take place across multiple levels, beginning with first-person self-experiences that are encoded and further recursively expressed through myriad neurobiological markers.

This 33rd Annual Meeting is an ideal platform to learn about recent advances in the field and how they can be used to improve recovery from complex trauma-related disorders.

We are delighted to unveil a new talk format this year: Flash talks. A flash talk is a 5-minute to-the-point overview of a study which should be accessible to anyone in the field. Twelve talks are scheduled back-to-back during a 75-minute session, chosen from a highly competitive group of submissions. Each session contains a diverse set of topics, running the gamut from biomarkers to thematic analyses, from parent-child dyads to global policy interventions.

We are also happy to announce improvements to the poster sessions. An additional Thursday lunch break poster session has been added. A special Case Study poster grouping is included in the Friday poster session. Finally, late breaking research submitted up until September is also featured during both the Thursday lunch and Friday evening poster sessions.

The program includes several featured presentations, in a variety of formats, not only including traditional symposiums and panels but also including daily multi-media presentations and workshops. We are particularly excited about our opening ceremony Wednesday evening, "Acts of Creation, Performance, and Empowerment", featuring non-traditional approaches to support resilience and recovery among Chicago youth who have been exposed to community violence, and our closing ceremony Saturday afternoon, "Modern Warriors", a live music drama co-created by veteran Staff Sergeant Jaymes Poling and jazz artist Dominick Farinacci.

We look forward to your sharing with us in this ISTSS Annual meeting experience seeking to better understand and recover from traumatic stress in all of its complexity.

Welcome to Chicago!!

General Information and Meeting Highlights

ISTSS New Attendee Orientation
Thursday, November 9, 10:15 a.m. – 11:30 a.m.
After the Thursday morning keynote, new attendees will have an opportunity to learn more about the activities of ISTSS and how the meeting works.

ISTSS Welcome Reception
Thursday, November 9, 7:00 p.m.– 8:30 p.m.
Please join us for an opportunity to welcome attendees to the ISTSS 33rd Annual Meeting. A selection of the top posters will be presented, organized by the Special Interest Groups. This will be a great opportunity to network and talk with poster presenters about the outstanding work happening in special interest areas. Enjoy a discussion with presenters while hors d’oeuvres are served alongside a cash bar.

ISTSS Business Meeting
Friday, November 10, 7:15 p.m. – 8:00 p.m.
All meeting participants are encouraged to attend the Annual Business Meeting on Friday evening. This is your opportunity to learn about the Society, ask questions and make suggestions for improving ISTSS.

ISTSS Awards
The ISTSS Awards will be presented during the morning Keynote Plenary Sessions.

Thursday, November 9:
• Frank W. Putnam Trauma Research Scholars
• Chaim and Bela Danieli Young Professional Award
• Lifetime Achievement Award

Friday, November 10:
• Public Advocacy Award
• Robert S. Laufer Award for Outstanding Scientific Achievement
• Sarah Haley Memorial Award for Clinical Excellence

Saturday, November 11:
• Dart Awards for Excellence in Coverage of Trauma
• Student Poster Awards

Student Events

Student Lunch Meeting
Friday, November 10, 11:45 a.m. – 1:15 p.m.
Lunch with ISTSS leadership includes presentation of the Student Awards

Internship, Post Doc & Graduate Programs Networking Fair
Friday, November 10, 1:30 p.m. – 3:30 p.m.
Look for the next step in your career. A great networking opportunity.
What’s New at the Meeting

Flash Talks
We are delighted to unveil a new talk format this year: Flash talks. A flash talk is a 5-minute to-the-point overview of a study which should be accessible to anyone in the field. Twelve talks are scheduled back-to-back during a 75-minute session, chosen from a highly competitive group of submissions. Each session contains a diverse set of topics, running the gamut from biomarkers to thematic analyses, from parent-child dyads to global policy interventions. One of the notable benefits of this format is that it allows audience members to experience a broad array of talks, and gain introduction to a range of methods, populations, and interventions that they might not seek out if it required commitment to a full symposium. At ISTSS, a participant could easily attend three days’ worth of talks only within their subdisciplines (e.g., of child therapy, psychobiology, or military intervention); and while we are pleased that we can offer such depth and specialization, we are mindful that we live in the era of the echo chamber. We believe that flash talk sessions will serve as a mechanism for maintaining cohesiveness within the field, while generating dialogue and inspiration.

Dedicated Case Study Poster Section
As a new initiative, this year’s conference will include a new poster series featuring case studies. Case studies will be featured poster presentations within the program and scheduled together, to facilitate discussion between presenters of interesting cases, as well as between presenters and attendees who are particularly interested in learning about traumatic stress studies from the perspective that is uniquely provided by case studies. The Case Study Posters will head the Poster Session Three on Friday.

Thursday Noon Poster Session
We have enhanced our poster session programming for this year’s conference, offering three featured and timely poster sessions within the overall conference program. We are very excited about this year’s conference poster session series starting with noon poster session on Thursday with post-lunch sweet treats. In addition, we will also have the Special Interest Group endorsed posters at the Welcome Reception.

Poster Session One, Thursday, Noon – 1:15 p.m.
Poster Session Two, Thursday, 5:45 p.m. – 7:00 p.m.
Welcome Reception SIG Endorsed Posters, Thursday, 7:00 p.m. – 7:45 p.m.
Poster Session Three, Friday, 5:45 p.m. – 7:00 p.m.

Late Breaking Posters
All too often research is not completed in time to submit for the ISTSS Annual Meeting so ISTSS opened a call for late breaking posters. They are grouped together in the Thursday noon and Friday evening poster sessions.

Conference Recordings
ISTSS is unable to offer conference recordings for the 33rd Annual meeting

Special Events/Meetings

ISTSS Special Interest Group Meetings
Friday, November 10, 12:00 p.m. – 1:15 p.m.
Saturday, November 11, 12:00 p.m. – 1:15 p.m.

Special Interest Groups (SIG) provide members with a forum for communication and interaction about specific topic areas related to traumatic stress and provides a means of personal and professional involvement in the activities of the society. See page 51 for a listing of specific SIG meetings for each day. All meeting participants are welcome to attend.

ISTSS Awards
Thursday, November 9, 8:30 a.m.
Friday, November 10, 8:30 a.m.
Saturday, November 11, 8:30 a.m.
Grand Ballroom, Fourth Floor

Help us recognize the recipients of this year’s ISTSS awards. The awards will be given before the keynote addresses on Thursday, Friday and Saturday. See a list of 2017 award winners on page 56.

Welcome Reception with SIG Endorsed Poster Presentations
Thursday, November 9, 7:00 p.m. – 8:30 p.m.
Grand Ballroom, Fourth Floor

Join us to welcome attendees to the ISTSS 33rd Annual Meeting. A selection of the top posters will be presented, organized by the Special Interest Groups. This will be a great opportunity to talk with SIG Chairs and poster presenters about the outstanding work happening in special interest areas. Enjoy a discussion with presenters while hors d’oeuvres are served alongside a cash bar.

See pages 172 – 175 for the list of posters being presented.

ISTSS Student Lunch Meeting
Friday, November 10, 11:45 a.m. – 1:15 p.m.
State Ballroom, Fourth Floor

All student members and nonmembers are invited to attend the student section meeting at the 33rd Annual ISTSS conference on Friday, November 10. This lunch meeting provides a great opportunity to meet and network with fellow students and future colleagues, as well as leaders in the field of traumatic stress studies from around the world. The recipients of the three Student Section awards will be announced.

This year’s meeting will feature “SPEED-MEETING” – a format based on the idea of speed-dating. Trauma experts will rotate between tables and provide students with an incredible opportunity to get to know the expert quickly, ask questions and glean wisdom and guidance from those who have successfully journeyed the same paths that students currently travel. It is our hope that students will learn and grow from this mini-mentorship exercise, feel more comfortable approaching trauma experts (and others) at the meeting and generally feel more a part of the ISTSS family.

Pre-registered students will receive lunch paid for by ISTSS. The Internship and Postdoctoral Networking Fair will be immediately following this lunch meeting. See you there!

Business Meeting
Friday, November 10, 7:15 p.m. – 8:00 p.m.
Crystal, Third Floor

All meeting participants are invited to attend the Annual Business Meeting. Learn about the Society, ask questions and make suggestions about ISTSS. In addition to meeting ISTSS leadership, the travel grant recipients will be announced.

Internship, Post Doc & Graduate Programs Networking Fair

Finding an internship or postdoctoral fellowship that features trauma specific training can be difficult. In an attempt to ease this burden, the Student Section of ISTSS offers this session to provide an opportunity for students to talk with representatives of various internship and/or postdoctoral fellowship programs who offer rotations or specializations in the clinical and/or research aspects of working with trauma. The training programs have the opportunity to recruit potential interns and postdoctoral fellows, while students have the opportunity to locate these programs, meet representatives, and ask any questions they have about the experiences offered and the application process.

This networking event is coordinated by Sacha McBain, Student Section Chair, and Stephanie Wells & Jon Magnus Haga, Student Section Vice Chairs.

*If there are sites you would like to see here in the future, please contact the Student Section leadership.

G. V. (Sonny) Montgomery VA Medical Center Internship in Health Service Psychology

Location: Jackson, MS

Population: The GVSM VAMC covers 80% of the counties in MS, part of eastern MS, and part of western Alabama; a large part of the Veteran population is rural. Our Veteran population is approximately 53% White and 46% Black or African-American. Ninety percent of our Veteran population is male; however, the percentage of female Veterans has increased in recent years. Approximately six percent of Veterans are 35 or younger; whereas, 49% of Veterans are 65 years old or older. Nearly half of Veterans served in the Vietnam era, with the number of Veterans in more recent conflicts growing rapidly (e.g., approximately 29% of Veterans have served in the Persian Gulf War era).

Emphasis: Our program emphasizes assessment, intervention and consultation skills in multiple settings (e.g., outpatient mental health clinics, primary care mental health, and inpatient/residential programs). There is a heavy emphasis on delivering evidence-based psychotherapies within these settings. Scholarly activities are a priority, with interns expected to participate in program evaluation and/or performance improvement projects throughout the training year, as well as contribute to peer-reviewed research submissions.

Training Opportunities: As PTSD is a significant concern for our population, there are opportunities to receive intensive training in Prolonged Exposure and Cognitive Processing Therapy. As Mississippi has a large rural population, interns learn deliver these interventions via telehealth modalities (to outpatient clinics throughout the state and to Veterans’ homes). Training rotations include opportunities to treat Veterans in residential treatment for PTSD, along with outpatient services for Veterans with PTSD and other comorbid mental health (depression, anxiety, substance use) and medical diagnoses. Interested interns have the option of participating in a 2-3 day Cognitive Processing Therapy workshop and 6 months of consultation with VA CPT trainers that fulfills requirements to be a VA CPT provider.

Continuing Education

Educational Need
The ISTSS Annual Meeting provides a forum for sharing research, clinical strategies, public policy concerns and theoretical formulations on trauma. It is an international assembly of professionals and students representing an array of disciplines including psychiatrists, psychologists, social workers, nurses, counselors, researchers, administrators, victim advocates, journalists, clergy and others with an interest in the study and treatment of traumatic stress. Speakers are strongly requested to avoid unnecessary jargon and to make their work and its implication to the traumatic stress field as accessible as possible to those who do not share their particular perspective and type of scientific approach. This is designed to facilitate increased understanding of what different types of researchers (e.g., basic scientists, clinical researchers) focusing on different types of traumatic stressors (e.g., child maltreatment, disasters, terrorism, war) using different research methods and perspectives (e.g., epidemiology, genetics, psychosocial, psychobiological) have found as well as what the implications of their work are for the traumatic stress field. Our aspirational goal is to establish a jargon-free zone in which experts maximize communication of their work, findings and implications in a way that facilitates understanding and cross-fertilization among researchers, clinicians and policy makers from other perspectives.

Conference Goals
After participating in this activity, participants will be able to:

• Review assessment and treatment innovations that integrate the full complexity of clinical presentations of traumatic stress, from disorder to recovery
• Synthesize research findings in traumatic stress studies across multiple levels of analysis, from phenomenology to neurobiology
• Tabulate and summarize the complexity of traumatic stress research across interacting variables, including event characteristics, person characteristics, socioecological environment, clinical interventions, and timescales

Satisfactory completion
Participants must complete an evaluation form to receive a certificate of completion. Your chosen sessions must be attended in their entirety. Partial credit of individual sessions is not available. NOTE: If you are seeking continuing education credit for a specialty not listed below, it is your responsibility to contact your licensing/certification board to determine course eligibility for your licensing/certification requirement.

Physicians
Accreditation Statement - This activity has been planned and implemented in accordance with the accreditation requirements and policies of the Accreditation Council for Continuing Medical Education (ACCME) through the joint providership of Amedco and the International Society for Traumatic Stress Studies (ISTSS). Amedco is accredited by the ACCME to provide continuing medical education for physicians.

Nurses
Amedco is accredited as a provider of continuing nursing education by the American Nurses Credentialing Center’s Commission on Accreditation.

CA Nurses

In recent years, gun violence in Chicago has reached levels not seen since the 1990s, with unprecedented numbers of Black and Brown children and teens among the injured. Although many young people coping with the ongoing threat of violence in their neighborhoods exhibit symptoms of Posttraumatic Stress Disorder consistent with those seen in traumatized combat veterans, few have access to or interest in traditional office-based trauma-focused psychotherapy. This panel will include developers of and participants in three innovative approaches to reach youth and provide them with opportunities to make sense and meaning of their experiences in a city plagued by community violence. The programs include Changing Voices, a program of Storycatchers Theatre; Story Squad, a Youth Safety & Violence Prevention program of YMCA Chicago; and Project FIRE, a program of ArtReach Chicago in partnership with Healing Hurt People - Chicago. Changing Voices is a supported employment program that engages groups of recently released young people to develop and perform a musical addressing the challenges they face upon reentry. Storycatchers Theatre coordinates Changing Voices with the Illinois aftercare system as part of an effort to increase likelihood of successful reentry for court-involved youth. Story Squad is a 16-week, curriculum-based program which serves young people in neighborhoods with some of Chicago’s highest rates of violence. The program focuses on developing self-reflection, critical thinking, self efficacy, and audio production and storytelling skills. Story Squad uses trauma-informed group processes that draw on foundational principles in media literacy, restorative justice and cognitive behavioral therapy in order to promote positive youth development. Through this process, youth can develop the social and emotional skills necessary to process their own experiences with violence and reexamine dominant narratives through the lens of context, place and policy, allowing them to place personal experiences within broader structural inequalities. Project FIRE (Fearless Initiative for Recovery and Empowerment) is an artist development employment program that offers healing through glassblowing, combining glass arts education, mentoring, and trauma psychoeducation to support trauma recovery and create jobs for youth injured by violence. Program developers will provide brief overviews of their respective programs, including how the programs evolved and their results over time. Following each program description, program participants will demonstrate their work through live musical and spoken word performances and video. Finally, program developers and participants will engage attendees in Q & A.

A Journey into Global Mental Health: Accessibility, Cultural Validity and the Prevention of War

Joop de Jong, MD, PhD
Vrije Universiteit, Amsterdam, Netherlands

This lecture contrasts prior efforts in public mental health in humanitarian settings with more recent efforts to reduce the mental health treatment gap around the globe under the banner of global mental health. It questions whether these strategies have been successful, both in high- (HIC) and low- and middle-income countries (LMIC). It argues that unequal access to services and an imbalance between prevention and treatment is a global phenomenon. Speaking of distress requires a yardstick to differentiate normal from abnormal across cultures. Rethinking our diagnostic systems may help the global mental health movement and trauma researchers to develop a classification system that is cross-culturally valid. Therefore, another theme of this lecture is the modernization of our classification system in what one may describe as the post-DSM era. After having worked for decades in over 30 countries I realize that prevention is paramount for global mental health. And that prevention of mass traumatic stress can only be achieved by preventing armed conflict and political violence, the last theme of my talk. But apart from the battlefield, our professions may provide a tremendous contribution in the prevention of other types of violence. I will conclude with some challenges for the future.

Joop de Jong, MD, PhD, is Emeritus Professor of Cultural and International Psychiatry at VU University, and Emeritus Visiting Professor of Psychology at Rhodes University, South Africa. He is Adjunct Professor of Psychiatry at Boston University School of Medicine, and senior researcher at the Amsterdam Institute for Social Science Research (AISSR). He was the founder and director of the Transcultural Psychosocial Organization (TPO), which provided mental health and psychosocial services in more than 20 countries in Africa, Asia, and Europe. Until today programs of TPO often operate in armed conflict areas and complex humanitarian emergencies. Joop de Jong worked part-time with immigrants and refugees in the Netherlands. Over the past decades he was involved in global mental health by integrating insights from public mental health, psychotherapy, psychiatry, anthropology and epidemiology in community interventions in a variety of cultures, on which he [co]authored and [co]edited 300 papers, chapters and books.

Dr. de Jong is a former ISTSS Board Member and is this year’s recipient of the ISTSS Lifetime Achievement Award.

Etiologic Research in Psychiatry: An Historical and Conceptual Analysis

Kenneth S. Kendler, MD
Virginia Institute for Psychiatric and Behavioral Genetics, VCU, Richmond, VA, USA

I provide a conceptual and historical review of the approach taken to the etiology of psychiatric illness. Throughout our history, psychiatry has striven for mono-causal theories – that one major risk factor is responsible for our disorders. Framed in another way, this claim has been that one explanatory perspective in psychiatry is and should be pre-eminent. I provide a few examples of such claims which have largely or entirely failed. I then advocate for the position that psychiatric disorders are inherently multi-factorial and review empirical support for this position. Our disorders are multifactorial in two senses – they involve many levels of explanation and within levels many risk factors. But the situation is even more complex as we have good evidence for interactions between levels and for causal loops which are especially relevant for disorders like PTSD. I explore the implications of this position for our conceptual approach and research agenda. I suggest that we need to adopt explanatory pluralism in our research efforts and support research programs that are able to examine at the same time, multiple levels of causal factors. The implications for this position for reductionist versus emergent theories of psychiatric illness is also explored. Finally, I comment on what this approach might mean for the relationship between explanation and understanding in the clinical approach to our patients and argue that human meaning, an irreducible feature of the human condition, has to play a significant role in most of our etiological models.

Kenneth S. Kendler, MD, Banks Distinguished Professor of Psychiatry, Professor of Human Genetics, Medical College of Virginia, Virginia Commonwealth University.

Dr. Kendler received his medical and psychiatric training at Stanford and Yale University, respectively. Since 1983, he has been engaged in studies of the genetics of psychiatric and substance use disorders, including schizophrenia, major depression, alcoholism, personality disorders and drug abuse and dependence. He has utilized methods ranging from family studies, to large-sample population-based twin and adoption studies to molecular genetic studies including linkage, association, GWAS and sequencing aimed at identifying specific genes that influence the vulnerability to schizophrenia, alcoholism, depression, personality disorders and nicotine dependence. Data collection for these studies has been completed in Virginia, Ireland, England, China, Norway, Finland and Sweden. He has published over 1,000 articles, has received a number of national and international awards for his work, is a member of the National Academy of Medicine, is Editor of Psychological Medicine. He has been actively involved in DSM-III-R, DSM-IV and DSM-5 where he chaired the Scientific Review Committee and currently is Vice-Chair of the APA DSM Steering Committee. Since 1996, he has served as Director of the Virginia Institute of Psychiatric and Behavioral Genetics.

On a personal note, Dr. Kendler is married to Susan Ann Miller, a family practitioner, and has three children: Jennifer, 36, a graduate with an MFA in Photography from the Art Institute of Chicago, Seth, 35, an Emergency Medicine Physician and Nathan, 27, a Graduate Student in history at NYU.

Adversity in early life, such as childhood abuse, neglect and loss, is a well-established major risk factor for developing a range of psychiatric and medical disorders later in life. Biological embedding of maltreatment during development is thought to underlie this long-term increased risk. Our results suggest that childhood trauma in humans is associated with sensitization of the stress response, glucocorticoid resistance, decreased oxytocin activity, inflammation, reduced hippocampal volume and changes in cortical fields that are implicated in the perception or processing of the abuse. The consequences of childhood trauma are moderated by genetic factors and mediated by epigenetic changes in genes relevant for stress regulation. Understanding trajectories of biological embedding, and their moderation by gene-environment interaction is critical to enable us to design novel interventions that directly reverse these processes and to derive biomarkers that identify children who are at risk to develop disorders or are susceptible to a specific intervention. Such advances will promote personalized care based on risk profiles and will inform targeted interventions to mitigate the adverse outcomes of early-life stress and promote lifelong health.

Prof. Christine Heim is the Director of the Institute of Medical Psychology at Charité. She is also a Member of the Cluster of Excellence Neurocure at Charité in Berlin as well as Professor of Biobehavioral Health and Member of the Network on Child Maltreatment Solutions at Pennsylvania State University. Dr. Heim’s research is focused on the neurobiological consequences of early-life trauma and their relationship to the development of depression, anxiety, and functional somatic disorders. She has authored or coauthored more than 100 articles and chapters. The impact of her work is acknowledged in more than 20,000 citations (H Index: 52 Google Scholar). She is the recipient of more than 10 honors and awards, including the 2004 Chaim Danieli Young Professional Award of the International Society of Traumatic Stress Studies, the 2007 Curt P. Richter Award of the International Society for Psychoneuroendocrinology, and the 2015 Patricia Barchas Award in Sociophysiology of the American Psychosomatic Society. She is an elected as a member of the American College of Neuropsychopharmacology. In 2015, she was elected into the Berlin-Brandenburg Academy of Sciences, one of the highest scientific honors in Germany. She is the recipient of multiple federal grants and foundation grants, and she serves on numerous national and international scientific review committees regarding research on the consequences of childhood trauma.

Modern Warrior Live

Modern Warrior is a live music drama co-created by veteran Jaymes Poling & jazz artist Dominick Farinacci. Narrated by Staff Sergeant Jaymes Poling, who spent three years in Afghanistan as an infantryman with the 82nd Airborne Division, he details his time spent in the military and transition home to civilian life, surrounded by a live musical performance lead by Dominick Farinacci (former Global Ambassador to Jazz at Lincoln Center NYC).

Exploring the psychological weights of war, challenges reintegrating as a civilian, and the potential for positive growth, Modern Warrior seeks to build bridges and understanding between civilian and veteran communities through music and stories, and puts forward a lesser-known term in American culture: post-traumatic growth.

The live performance will be followed by a panel discussion.

Moderator: Patrick Palmieri, PhD
Panelists: Harold Kudler, MD
Eric Vermetten, MD, PhD
Andrea Phelps, PhD
Severe dissociative symptoms are common among individuals who experienced complex trauma, particularly developmental trauma. Yet few clinicians have been trained to treat severe dissociation. Many highly dissociative patients also struggle with myriad co-morbid symptoms including self-destructive and suicidal behavior. This lack of training and the severity of symptoms can leave clinicians feeling anxious and de-skilled. This master clinician is the primary investigator of the first online, psychoeducational program aimed at helping dissociative patients and their therapists stabilize patients' safety, emotion regulation, and quality of life - the Treatment of Patients with Dissociative Disorders (TOP DD) Network program. Dr. Brand will present step-by-step guidance developed for the TOP DD program on how to manage severe dissociation in clinical practice. Using case examples and role plays, she will teach attendees pragmatic interventions to help highly dissociative patients stay better grounded in present reality and gradually learn to tolerate their emotions.

Dr. Brand specializes in the assessment and treatment of trauma related disorders including posttraumatic stress disorder (PTSD) and dissociative disorders (DDs). She has over 25 years of clinical and research experience, including training at Johns Hopkins Hospital, George Washington University Hospital, and at Sheppard Pratt Health System’s Trauma Disorders program. Dr. Brand has been honored with numerous research, teaching and clinical awards and served on several national task forces that developed guidelines for the assessment and treatment of trauma-related disorders. Dr. Brand is the Principal Investigator on a series of international treatment studies of patients with dissociative disorders (the TOP DD studies). Dr. Brand is also the Principal Investigator on a series of studies that are developing methods for distinguishing DDs from other conditions including malingered DDs. She has delivered clinical and research presentations around the world. In addition to assessing and treating patients, Dr. Brand serves as a forensic expert.
Using the chapter from the newly published Handbook of Trauma Psychology on “Complex trauma and complex PTSD” as a foundation, the presenter will provide an update of the sequential relational meta-model of trauma-focused psychotherapy originally described in the 2013 book Treatment of Complex Trauma. Case examples with children and adults will be discussed to illustrate several critical therapeutic dilemmas faced by psychotherapists when treating clients with complex developmental trauma histories. A trans-theoretical R&R framework will be described for understanding and handling these dilemmas at the moment they occur, highlighting the key role in both trauma memory-focused and present-centered trauma sequelae-focused psychotherapies of: (1) therapeutic titration and utilization of in-session critical incidents involving reactivation of trauma-related survival adaptations (e.g., intrusive re-experiencing, hypervigilance, dissociation, shame, hopelessness), and (2) enhancing resilience (e.g., affect regulation, stable coherent sense of self, secure relational attachment schemas, executive function). Implications for therapist self-care and handling secondary traumatic stress reactions will be discussed.

MDMA-assisted Psychotherapy for PTSD: An Update on Evidence from Thirteen Years of Clinical Trials

MDMA (3,4-methylenedioxymethamphetamine) was used as an adjunct to psychotherapy for approximately ten years before legal clinical administration ended in 1985 when, because of growing recreational use under the name “Ecstasy”, MDMA was placed in Schedule 1 by the Drug Enforcement Administration. Several case series were published during this period, but no controlled Clinical Trials were conducted until Grob published the first US Phase 1 trial in healthy volunteers in 1998. Between 2004 and the present there have been six Phase 2 Clinical trials testing MDMA-assisted psychotherapy for subjects with PTSD that had not responded to existing treatments. In November 2016, based on the evidence from Phase 2 studies, the FDA gave clearance to proceed to Phase 3, multicenter clinical trials that are now planned to begin in 2018. This presentation reviews the physiological effects of MDMA and the possible neurophysiological mechanisms underlying its therapeutic effects. The manualized treatment approach used in Phase 2 trials will be described. An emphasis will be placed on the study design and results of two randomized, placebo controlled clinical trials conducted by the authors, the first one treating primarily crime-related PTSD and the other treating PTSD in military veterans, firefighters and police officers. The first trial, which has been published, demonstrated statistically and clinically significant response in Clinician Administered PTSD Scores (CAPS) in 83% of the group randomized to MDMA-assisted psychotherapy, compared to 25% in the group receiving the same psychotherapy with inactive placebo. A published long term follow-up of this cohort showed sustained benefit for at least 74% of participants a mean of 45 months later (range 17-74 months). Preliminary results of the recently completed study with veterans and first responders also showed a large effect size. Pooled results of the 6 completed Phase 2 trials are presented, with a mean effect size of 0.9 across 6 studies including a total of 107 participants. The nature of the therapeutic experience is illustrated with quotes from participants and a short video clip of an MDMA-assisted psychotherapy session. There is a brief description of the likely Phase 3 protocol and the training program for MDMA research therapists.

Michael C. Mithoefer, MD, completed the first Phase II FDA-approved clinical trial of MDMA-assisted psychotherapy for crime-related treatment-resistant PTSD in 2009, followed by a similar study in military veterans, firefighters and police officers completed in 2016. He has trained therapy teams and been Medical Monitor for other Phase II MDMA studies in the US, Israel and Europe. He is currently conducting a study in collaboration with Candice Monson, PhD combining Cognitive Behavioral Conjoint Therapy with MDMA-assisted psychotherapy, and is training research therapist teams for upcoming multicenter trials of MDMA-assisted psychotherapy for PTSD in the US, Canada and Israel. What is it Like to Undergo a Traumatic Experience – the Phenomenological Approach in the Study of Trauma

In this talk I will argue that the phenomenological approach, as a method that focuses on the bodily level of experience and in particular on the body as it is experienced from within, enables us to penetrate the traumatic experience. It appears that by embracing the phenomenological approach, on both the philosophical and methodological levels, we can redefine the very concept of trauma. I argue that by applying the phenomenological approach, we can improve our understanding of the traumatic experience and its long-term implications.

Yochai Ataria, PhD, completed his doctorate at the Hebrew University of Jerusalem and his post doctorate at the Weizmann Institute of Science. Ataria is currently a senior lecturer at Tel-Hai College and a researcher at the Open University of Israel. He has published over 30 theoretical, empirical, and philosophical papers. Together with others, Ataria has also edited the following books: Kafka: New Perspectives (Safra, 2013), the Interdisciplinary Handbook of Trauma and Culture (Springer, 2016), and the Post-Humanistic Age (Pardes, 2016).

From a network perspective, a mental disorder (e.g., depression), is the potential consequence of symptoms that interact with one another in a network structure. For example, someone loses his job, which causes him to develop sleep problems. The sleep problems, over time, cause fatigue while the fatigue causes concentration problems. The concentration problems, in turn, cause feelings of guilt, which trigger depressed mood: (insomnia -> fatigue -> concentration problems -> feelings of guilt -> depressed mood) => major depressive episode. In this talk I will, firstly, elaborate on network theory as a novel way of thinking about mental health disorders. Secondly, I will explain some of the state-of-the-art methods with which one can estimate network structures. Thirdly, I will discuss the potential implications of a network perspective on thinking about vulnerability and resilience. Specifically, I will discuss the possibility that vulnerability is associated with strong symptom-symptom interactions. That is, a network of depressive symptoms that is strongly connected appears to be, when put under stress, more vulnerable to developing a depressive episode than a network of depressive symptoms with relatively weak connections. I will conclude my talk by discussing some of the challenges that the network perspective in general faces in the near future.

Angélique O.J. Cramer, PhD, is an Associate Professor in models and methods for clinical psychology at the department of Methodology and Statistics at Tilburg University. In September 2013, she finished her PhD thesis with honors. She specializes in the development of theoretical and statistical models for the development and maintenance of psychiatric disorders and comorbidity between them. Specifically, her focus is on network modeling and complex dynamic systems. Additionally, she works on more general methodological issues such as measurement invariance and solutions to the multiple comparisons problem. Since September 2015 her work is funded by a NWO innovational VENI grant. She has published > 30 scientific papers in internationally renowned journals such as Psychological Medicine (IF: 5.49), Behavioral and Brain Sciences (IF: 20.42), Annual Review of Clinical Psychology (IF: 16.69) and PNAS (IF: 9.40). In January 2017 she was awarded a Rising Star designation by the Association for Psychological Science (APS). From February-June 2017 she is a fellow at the Dutch Institute for Advanced Study (NIAS), working on the problem of relapse in patients with major depression.

Psychological science is devoted to phenomena that can only be indirectly observed using instruments that are limited in both reliability and validity. These shortcomings may not be concerning when one’s goals are restricted to testing theory under well controlled circumstances but they become more worrisome when challenged to apply research to complex real-world situations. Professor Pole will share his efforts to grapple with a number of thorny methodological problems over the course of his career. First, he will describe the challenges of verifying psychotherapy integrity without manualization and establishing evidence of causal change in therapy without randomization. Second, he will discuss the value and challenges in simultaneously assessing subjective, behavioral, and psychophysiological concomitants of emotion to better understand trauma-related psychopathology and psychotherapy. Third, he will explore complexities in studying the role of sociodemographic identity (especially race and ethnicity) in traumatized populations. Finally, he will consider the importance of aggregated evidence that may emerge via meta-analysis and other research review methods. This will include lessons learned from his term as an Associate Editor of Psychological Bulletin. Overall, the talk aims to inspire and invite innovation in trauma research methods to better meet the intricacies of clinical reality.

Nnamdi Pole, PhD, is a tenured Professor of Psychology, Adjunct Professor of Social Work, and Chair of the Institutional Review Board at Smith College. His research interests include ethnocultural variation in traumatic stress, psychophysiology, and psychotherapy. He has served on the International Society for Traumatic Stress Studies (ISTSS) Board of Directors, the American Psychological Association Division 56 Executive Committee, and as Associate Editor of Psychological Bulletin. He also serves on the Editorial Boards of the Journal of Anxiety Disorders and Psychological Trauma: Theory, Research, Practice, and Policy. He is lead author of the “Stress and Trauma Disorders” chapter in the recent APA Handbook of Clinical Psychology and a chapter on “Behavioral and Psychophysiological Assessment of Trauma” in the APA Handbook of Trauma Psychology.

The traumatic stress field is increasingly relevant to discussions and debates on a variety of global challenges. As a global leader in the field, ISTSS is working to identify opportunities to share relevant research and clinical knowledge with our membership, the public, and policymakers on timely public health and policy issues of importance to our mission. This session will provide an overview of newly established ISTSS criteria for engaging on key public health and policy issues and share some examples of recent ISTSS efforts to enhance our global impact. Specifically, presenters will discuss ISTSS supported initiatives including participation in the 2017 March for Science, the ISTSS Trauma and Public Health Task Force report, the ISTSS statement on the U.S. travel restriction policy, and a recent ISTSS briefing paper on trauma in refugees and displaced persons.

In this panel we present the ISTSS Global Collaboration, which was formed as part of the ISTSS Global Initiative. It consists of an affiliation between societies for traumatic stress studies around the world and it includes representatives from different regions including Japan, Africa, Europe, North and South America, Hong Kong, and Australia. The aim is to stimulate collaboration around the world without creating a new global structure, but by focusing on topics that matter globally (Schnyder & Ölff, 2013). The panel will introduce the Global Collaboration, the selection of the topics and the process of working together (Olff/Schnyder). Some of the products will be presented, e.g. the “Internet information on Childhood Abuse and Neglect” (iCAN) (Lueger-Schuster) or the study on a “Computerized Childhood Attachment and Relational Trauma Scale” (CARTS) (Frewen) around the world. Language barriers, challenges in attaining an ethical approval, and benefits will be discussed (all) and we will address the question whether this form of working together is helpful in the discussions around our global mission (all). The panel will include Ullrich Schnyder, pioneer of the global initiative of the ISTSS, Grete Dyb, past president ISTSS, Ingo Schäfer, president of ESTSS, Misari Oe representing JSTSS, Dean Ajdukovic, president of the Croatian STSS, Paul Frewen for the Canadian STSS, Brigitte Lueger-Schuster for ESTSS, and Miranda Ölff, chair of the global collaboration.

The updated ISTSS Treatment Guidelines for PTSD are due to be published in 2018. This panel, comprising members of the ISTSS Guidelines Committee, will provide an update of the progress to date. Through interactive discussion with the audience, the panel will particularly consider:

a. The experience of working collaboratively with the ISTSS membership to identify all relevant research that should be used to inform the final Guidelines.

b. Possible reasons for inconsistencies between guidelines – why do different guideline groups come to different conclusions and recommendations despite having access to the same literature?

c. The experience of working collaboratively with other agencies to achieve an integrated international approach designed to ensure that common and accurate datasets are used to inform guideline development.

Two presenters (social work and clinical psychology) will introduce the newly launched Office for Victims of Crime’s Vicarious Trauma Toolkit (VTT), a free, multimedia, online resource for organizations serving victims of violence and exposure to traumatic stressors. Addressing vicarious trauma is critical to first responders’ mental health, overall organizational health, and high quality victim support services. The VTT was developed through a national partnership led by the Institute on Urban Health Research and Practice at Northeastern University. Two National Summits took place with representatives from organizations including International Association of Chiefs of Police, International Association of Fire Chiefs, National Association of State EMS Officials, National Children’s Advocacy Center, National Center for Victims of Crime, and the International Society for Traumatic Stress Studies (ISTSS). The toolkit was piloted in seven communities across the United States, heterogeneous in location and size. This workshop will introduce participants to VTT materials including agency guidelines, presentations with detailed instructor notes, and a collaborative assessment using the Vicarious Trauma Organizational Readiness Guide, a free tool that helps assess an agency’s strengths and gaps in staff support. Videotape segments from the toolkit will be included. Suggestions for vicarious trauma-informed approaches will be discussed based on audience interaction.

Flash Talks

We are delighted to unveil a new talk format this year: Flash talks. A flash talk is a 5-minute to-the-point overview of a study which should be accessible to anyone in the field. Twelve talks are scheduled back-to-back during a 75-minute session, chosen from a highly competitive group of submissions. Each session contains a diverse set of topics, running the gamut from biomarkers to thematic analyses, from parent-child dyads to global policy interventions. One of the notable benefits of this format is that it allows audience members to experience a broad array of talks, and gain introduction to a range of methods, populations, and Interventions that they might not seek out if it required commitment to a full symposium. At ISTSS, a participant could easily attend three days’ worth of talks only within their subdisciplines (e.g., of child therapy, psychobiology, or military intervention); and while we are pleased that we can offer such depth and specialization, we are mindful that we live in the era of the echo chamber. We believe that Flash talk sessions will serve as a mechanism for maintaining cohesiveness within the field, while generating dialogue and inspiration.

Our understanding of the complexity of traumatic stress responses continues to grow. In this featured panel, ISTSS lifetime achievement award recipient Dr. Joop de Jong and ISTSS past-presidents Doctors Ulrich Schnyder, Stuart Turner, Miranda Olff, and Barbara Rothbaum discuss how their own ideas concerning how to understand, assess, and intervene in traumatic stress responses has matured over the course of their collective clinical and research careers, and will share their best predictions and impressions regarding what are the next most urgent steps for the clinical and research fields. The audience is encouraged to participate in what is sure to be a lively discussion about what we all have learned through our studies into the complexity of traumatic stress responses, from disorder to recovery.

Dedicated Case Study Poster Section

As a new initiative, this year’s conference will include a new poster series featuring case studies. Case studies will be featured poster presentations within the program and scheduled together, to facilitate discussion between presenters of interesting cases, as well as between presenters and attendees who are particularly interested in learning about traumatic stress studies from the perspective that is uniquely provided by case studies. The Case Study Posters will head the Poster Session Three on Friday. Friday Posters FRI 101 to FRI 112.

Documentarians Patrick Reed and Andréa Schmidt were researching “PTSD: Beyond Trauma,” a film about the different symptoms, histories, and trauma types that are encompassed by the PTSD diagnosis, when they found Project FIRE. A partnership of a community-based arts program, an academic medical center, and a hospital-based violence intervention program, the glassblowing workshop was founded by trauma psychologist Brad Stolbach and glass artist Pearl Dick, and designed for youth injured by gun violence. The teens learn glass sculpture—while getting job training and trauma psychoeducation using The Sanctuary Model’s S.E.L.F. Group Curriculum. In this session, presenters will be joined by a Project FIRE mentor instructor and peer facilitator. Two video screenings (6 min. excerpt of “Beyond Trauma” focusing on Project FIRE; 4 min. music video collaboration with facilitators) will set-up discussions: How does glassblowing address traumatic stress symptoms? From researchers’, facilitators’, and filmmakers’ points of view, what impact does the Firehouse space have on individuals in a context where threats to safety are many and loss is a frequent part of early life? How can key S.E.L.F. Curriculum topics (Safety, Loss, Emotion, Future) be explored in the process of making art, whether glass sculpture, music, or video?

Trauma can have a range of complex effects on children and adolescents with the potential for varied responses across different relationships and systems, particularly if a child’s trauma history is not “remembered” or identified. This workshop will highlight an innovative and comprehensive public awareness campaign, and share a variety of multi-media resources (video and web-based) on complex trauma. These educational resources include a 2-part film (“Remembering Trauma”), training guides and website, all designed to increase awareness among providers, youth and caregivers involved in various child-serving settings. We will also emphasize challenges providers may face when disseminating and supporting the use of trauma-informed resources in practice. Remembering Trauma, Part 1 (highlighted at last year’s meeting) has received widespread positive feedback from both providers and family members, as a powerful education and awareness raising tool on the critical topic of trauma and misdiagnosis. Part 2 of Remembering Trauma integrates expert interviews and commentary which further elucidate and expand upon the key messages depicted in the film (Part 1). These experts represent key roles and service systems this film was intended to reach – including juvenile probation, school counseling, child psychiatry, and early childhood and adolescent mental health. It is designed to support ongoing trauma-informed education and training efforts across these and other systems. These resources were developed to address existing needs and gaps in the field and support the work of multi-disciplinary professionals. They highlight the critical importance of providers’ use of a “trauma lens” in their work and
advocacy efforts, emphasizing the potentially detrimental impact of not using this lens in the context of identification, assessment and service delivery across different systems. In this interactive workshop, we will highlight resources and share film clips that are designed to: 1) raise awareness on the complex effects of trauma on children over the course of development and the potential for mislabeling or misdiagnosis; 2) highlight the impact on social relationships with family members, peers, intimate partners, and one’s own children, and, 3) illustrate the impact and role of providers across systems where the child may interface. We will facilitate discussion with participants about lessons learned from this process and highlight strategies for how to effectively share and implement resources and support their use in practice at both an individual level (with youth and families) and at a systems level in order to build and sustain trauma-informed systems.

Pop culture’s focus on the military’s struggle with Posttraumatic Stress Disorder obscures the facts that PTSD affects more civilians than soldiers, and more women than men. So when filmmakers Patrick Reed and Andréa Schmidt set out to make a documentary about PTSD for the Canadian Broadcasting Corporation’s science program, “The Nature of Things,” they sought to shift away from this overly narrow focus. Drawing on their experience covering war, genocide, and natural disaster they asked: When so many people experience the trauma of sudden loss, near-death, and violence, what makes some people more vulnerable to PTSD than others? They found that while researchers are developing increasingly clear images of the brain circuitry that manifests as PTSD, and the list of therapeutic interventions is growing, what makes people vulnerable is as complex as individuals’ (and their families’ and communities’) histories of trauma. Reed will introduce four 2-5 minute excerpts from “PTSD: Beyond Trauma.” Following each, researchers appearing in the film will discuss: what makes some individuals vulnerable to impairment after trauma and others resilient; how research impacts practice and vice versa; what kinds of evidence matter most to intervention developers and patients; and the challenge of communicating complex questions and issues to a broad audience.

Understanding trauma's complex impact on children is one step in the continuum of care providing trauma-informed services. As trauma affects the social relationships of the individual, particularly for children and important adults in their lives, creating positive relationships with these adults can significantly aid the healing process. Relationships are critical in prevention and acute and long-term interventions. Strong relationship skills are key principles of evidence-based parenting programs: Parent-Child Interaction Therapy (PCIT), Incredible Years (IY), Helping the Non-compliant Child, Parent-Management Training—Oregon Model (PMTO), and Positive Parenting Program (Triple P). However, these programs require intensive training and treatment. As a result, access to programs designed to improve relationships is lacking. Child-Adult Relationship Enhancement (CARE) was developed to help address this deficiency. Based on the evidenced based parenting programs, CARE is a set of skills created to enhance relationships and reduce mild/moderate behavior challenges often present after trauma. CARE is for use by any adult interacting with a child/youth. Thus far, CARE has been disseminated to several thousand adults with evidence, forthcoming. An RCT comparing CARE in primary care settings to traditional anticipatory guidance found significant improvements in behavior problems, empathy toward children’s needs, attitudes toward corporal punishment, and attitudes towards children’s independence for those receiving CARE. Current studies of children in foster care are promising and evaluations of CARE in school systems are underway. CARE has been taught to staff in child protection services, family and drug courts, substance abuse treatment centers, home visiting programs, and domestic violence shelters and to families in these systems. Medical, mental health, and allied health professionals have received CARE training to complement their services, especially to children experiencing trauma. CARE has been adapted for use with military families and crisis counselors following disasters. The CARE workshop will teach participants skills they can immediately implement with families they serve. Handouts for use when working with families will be provided. The workshop will include didactic information, videos, activities, and live practice with feedback for the greatest learning potential. Implementation, dissemination efforts, and research will be discussed helping participants determine how CARE can be useful in their settings, thus improving their efforts addressing trauma.

Good evidence exists for PTSD treatments in which memory-focused techniques such as imaginal reliving and prolonged exposure play a significant role (Bisson et al., 2013). However, the evidence base is sparse for complex presentations of PTSD including dissociative subtypes. For example, where trauma has been experienced in early life, is prolonged and repeated, or includes themes of perpetration or permanent injury. There are gaps in our understanding of how to adapt existing protocols to apply these treatments effectively with complex cases in routine clinical settings. Revisiting the principles and theories underlying treatment can help us generate novel techniques, and adapt existing ones to overcome these difficulties.
The workshop will bring together cognitive models of PTSD and memory (Ehlers & Clarke, 2000; Brewin et al., 2010; Arntz, 2012), core CBT principles, and advanced therapeutic techniques to solve commonly encountered obstacles in PTSD treatment, such as overwhelming affect, difficulties connecting with feelings and memories, head-heart lag and problems identifying target memories in multiple trauma presentations.

This institute will address (1) common obstacles in working with trauma memories (2) how to apply principles from existing cognitive models of PTSD to formulate these problems (3) how diverse memory techniques can be conceptualised using these models and (4) how to implement these techniques creatively and effectively while maintaining fidelity to cognitive models.

The workshop will be facilitated by two leading experts in trauma-focused cognitive therapy, who between them have over 25 years of clinical experience working with complex cases. The workshop will be structured around Kolb’s learning cycle using case material to present clinical examples of commonly encountered problems in PTSD treatment, theoretical frameworks to conceptualise these problems, generate solutions using a broad range of memory and experiential techniques, and give opportunities for participants to practice and reflect on using these techniques in their own work.

Key problem areas and recurring themes in PTSD will be explored. For each area, a range of clinical examples will be presented, and generated from participants’ experiences. Fundamental principles will be applied to understand these difficulties; and how techniques from a range of models can be adapted to address the conceptual obstacles. There will be extensive use of audio-visual materials, including video clips of therapy. Practical examples and tips on how to implement these techniques will be given, and participants will be invited to reflect on and role-play how they will apply similar strategies to their own cases.

Although there are effective evidence-based treatments for PTSD, many do not fully benefit. One of the reasons may be that, for some, current evidence-based PTSD treatments may not adequately address the deep wounding that occurs when trauma shatters the core of a person’s self identity. This wounding, typically referred to as moral injury, has become an area of growing interest to clinicians who treat trauma. This workshop, presented by a multidisciplinary team (clinical psychologist, clinical social worker and clinical chaplain), focuses on the relationship between PTSD, self/moral injury, and the skills/resources that are needed to facilitate healing of self/moral injury. An overview of the PTSD literature is presented to identify key terminology and theoretical concepts related to self/moral injury, including models of self/moral injury and healing that are derived from integrating the presenters’ recent qualitative and quantitative research with what is known from the current literature. A curriculum is described that addresses self/moral injury (called “Search for Meaning”) which is collaboratively facilitated in a Veterans Administration Medical Center setting by a clinical chaplain and mental health clinician, both experienced in trauma treatment. Select elements of the curriculum are explored, such as levels of self/moral development and wounding, how belief systems are compromised by traumatic experiences, anger resolution, grieving losses, and forgiveness. The audience is invited to participate in identifying ways they can use the information gained during the workshop to: (1) inform their own clinical work with self/moral injury; (2) develop referral sources and collaborations within the pastoral care community and their treatment settings; (3) consider ways to address self/moral injury in the treatment of diverse populations, e.g. those who are incarcerated, in substance use treatment and (4) discuss future directions for research.

Educating providers and responders who come into contact with Veterans and other trauma survivors is a priority of VA’s National Center for PTSD (NCPTSD). To that end, NCPTSD integrates clinical and scientific knowledge into materials that facilitate PTSD recognition, support evidence-based treatment engagement and foster improved interactions with those with PTSD. Because of the diversity of responder and provider groups, as well as the complexity of the needs of those with PTSD, NCPTSD has developed toolkits which are aimed at different provider or responder groups. The toolkits include succinct, focused material that helps these providers/responders ensure that those with PTSD remain functional, and allows different communities and cultures to create valuable, accessible resources for those in need.

In this workshop presentation we describe these toolkits for Community Providers who work with Service Members and Veterans, Clergy, Police, and Disaster Mental Health Providers, as well as a toolkit aimed at self-care for mental health providers. The presenters will describe the conceptualization, development, and dissemination of these diverse products. The session will conclude with recommendations for use of the products in practice.

Understanding, Assessing, and Treating Traumatic Dissociative Reactions, Part One: Assessment

Severe dissociative symptoms are common among individuals who experienced complex, developmental trauma. These are among the most challenging patients to treat due to the severity of their symptoms. Furthermore, few clinicians have been trained in the assessment and treatment of high dissociation. It is common for clinicians to feel de-skilled and overwhelmed when working with these individuals. Their poor affect regulation skills make them prone to self-destructive and suicidal behavior if treatment is not carefully planned and paced, guided by ongoing assessment of their symptoms and skills.

The goal of this institute is to teach participants about the assessment and treatment of severe dissociative reactions. We will present an overview of the neurobiological research about dissociation and the rationale for adapting trauma treatment that is informed by these neurobiological patterns. We will review the early results of the Treatment of Patients with Dissociative Disorders (TOP DD) Network program – the first online, psychoeducational program aimed at helping dissociative patients and their therapists stabilize patients’ safety, emotion regulation, and quality of life. The TOP DD Network program is associated with increased self-compassion, decreased symptoms, and improved affect regulation and quality of life. We will provide step-by-step guidance on how to implement some of the TOP DD Network interventions in clinical practice. We will achieve these goals by presenting research and case examples, showing patients’ art work and journaling, and teaching interventions to further develop clinicians’ skill with highly dissociative patients.

This PMI will introduce participants to the changes in cognitive processing therapy (CPT) over time to the current protocol. The first book published in 1993 was a bare bones manual that outlined CPT, much as it is today, but didn’t include the importance of Socratic Dialogue nor did it include how to conceptualize PTSD treatment from a cognitive perspective. When we began dissemination in the VA, we rewrote the manual with more examples included, pared down some worksheets, added others, and tried to do a bit more with conceptualization and especially so in workshops. Following research (Resick et al. 2008; 2012) that there is no added value in doing the written accounts except in cases with very high dissociation, and the drop out rate is 15% higher with accounts, most studies conducted since then have implemented CPT without accounts. Our recent approach is to provide CPT (without accounts) as the primary therapy and CPT+A (with written accounts) as a secondary form of the protocol. Following feedback from trainers and providers, we have again modified the handouts and included adaptations for specific situations like post-concussive symptoms and dementia. This workshop will assist therapists in making the adaptation from always using written accounts to implementing a hierarchy of cognitive questions and implementing variable length CPT.

Yoga is increasingly used as a Complementary and Integrative Health modality in the treatment of PTSD. This workshop includes podium presentations that describe yoga interventions used in research, the body of evidence for yoga for PTSD, as well as an experiential Trauma Center-Trauma Sensitive Yoga (TC-TSY) skills-development session for participants. Yoga, defined here as a combination of physical forms, focused breathing, and mindfulness, is a promising complement or alternative to evidence-based psychotherapy. TC-TSY in particular aims to cultivate awareness of the mind-body connection and to build self-regulation skills to address the way that trauma is held in the body in a way that psychotherapy does not. A trio of presenters (nurse scientist, clinical psychologist, and yoga teacher) describe the state of the science of yoga for PTSD and teach participants techniques to integrate yoga in clinical work. Presentations include a 1) review of yoga interventions used in PTSD research, 2) description of the current evidence for yoga as an intervention for PTSD, 3) systematic review of objective research outcome measures (biological markers and psychophysiological data) of the effectiveness of yoga for PTSD, and 4) an interactive session for participants to learn how to incorporate TC-TSY into clinical practice.
Developing and Delivering a Train the Trainer Programme to Implement Evidence Based Practice in Low and Middle Income Countries

Objective
To disseminate and sustainably implement evidence-based trauma focused psychological therapy in low and middle income countries.

Methods
An evidence-based trauma-focused cognitive behavioural therapy treatment for PTSD, developed at Cardiff University, was collaboratively adapted with colleagues from Ilia State University to make it culturally relevant and feasible for delivery in Georgia. In parallel, a train the trainer programme was designed for its dissemination and implementation.

Mental health professionals undertaking a Masters in Mental Health (Psychotraumatology) at Ilia State University underwent an initial two-day training in February 2015 and then provided supervised treatment to PTSD sufferers with local supervision provided by two of the presenters (NM and JJ) and Skype supervision from the third (JB). A further two-day training event was held in June 2015. Initial results were promising with a mean reduction of almost 50% on the PCL-5.

Given the nature of the difficulties experienced by the PTSD sufferers presenting to the local services, further evaluation suggested a need for more work around emotional regulation and interpersonal relationships. This resulted in the incorporation of elements of Skills Training for Affective and Interpersonal Regulation (STAIR). In January 2017, three trained trainers from Georgia delivered the training programme to a second cohort of Masters students at Ilia State University; their training and evaluation of its outcome is ongoing. The training programme will be initiated in Ukraine in spring 2017.

During the workshop, the presenters will interactively work with the audience to explore the Train the Trainer Programme, the lessons learnt and how the approach could be adapted for use in other settings.

A Family-based Preventive Intervention for Active Duty Military Personnel and Veterans: Supporting Military and Veteran Families through Transition

Since September 11, 2001, almost 3 million U.S. military service members have been deployed in support of the conflicts in Iraq and Afghanistan. Almost half of soldiers who have deployed are parents of dependent children, and more than 2 million children have been separated from their service member parent due to a military deployment (DoD, 2015). A multidisciplinary, multi-institutional team of clinicians and researchers will discuss a program designed to support military and veteran families with children and adolescents in the post-9/11 era: Strong Families Strong Forces (SFSF). SFSF was originally developed and tested as a home-based reintegration program for National Guard and Reserve families with young children. The model has since been adapted for use with military and veteran families and children and adolescents in transition with distress and trauma-related symptoms due to deployment. SFSF is designed to provide support to families with children and adolescents prior to, during, and after deployment and focuses on increasing the protective factors associated with well-being and resilience in children and adolescents. The model is based on three pillars: individual and family-focused components, as well as a community and school-based focus. The three components include parent training, child groups, and school-based programs. This presentation will provide an overview of SFSF, including the rationale behind the model and the dissemination strategies used to support the training and implementation of SFSF in other military and veteran families. The presenters will also discuss the challenges and successes of implementing SFSF, as well as the evaluation of the program's impact on family functioning and child well-being.
been expanded to support Active Duty military families across the deployment cycle, and Veteran families transitioning from military-to-civilian life. Engagement strategies, program core principles, and clinical case material will highlight the experiences of the diverse post-9/11 military and veteran families who have participated in our program. We will provide an outline of the model including content and implementation of each session, and lessons learned using vignettes and video and audiotaped excerpts (recorded and presented with participant consent) in order to illustrate in-session dynamics and family processes.

Using the chapter from the newly published Handbook of Trauma Psychology on “Emotion regulation and skills-based interventions,” the presenter will provide an overview of the rationale, intervention models, and evidence-base for affect regulation-focused psychotherapy for PTSD and complex PTSD. Case examples with adolescents and adults will be discussed to illustrate the potential benefits and cautions involved in affect regulation psychotherapy with traumatized clients. Experiential exercises will provide attendees with the opportunity to learn and practice core therapeutic skills for applying an affect regulation framework to PTSD and complex PTSD treatment, and to the prevention or mitigation of therapist impairment due to secondary traumatic stress reactions.

The theoretical foundation of current evidence-based PTSD psychotherapy rests largely on cognitive-behavioral and extinction-learning models. Mainstay treatments, including prolonged exposure (PE), cognitive processing therapy (CPT), and eye-movement desensitization and reprocessing (EMDR) involve some combination of underlying core components encompassing exposure, cognitive restructuring, and/or modulation of physiological arousal. All produce roughly comparable efficacy on intent-to-treat analyses (e.g., averaging 40% ITT recovery, similar change scores, and wide-ranging drop-out rates). Recent emerging scientific knowledge of memory reconsolidation paradigms suggests the potential for validation of novel approaches that may offer more rapid and lasting efficacy. These approaches attempt to take advantage of memory re-consolidation mechanisms that become available for a brief window when memories are activated physiologically and paired with novel stimuli. This workshop will discuss strong emerging evidence for these interventions, including single session pharmacological approaches and psychotherapy approaches pairing imaginal exposure with rescripting techniques. One of the most promising, Accelerated Resolution Therapy (ART), will be described in detail along with preliminary pilot data from a large head-to-head randomized controlled trial versus CPT and clinical data from a community based clinic.
ISTSS Special Interest Groups

Special Interest Groups (SIGs) provide members with a forum for communication and interaction about specific topics related to traumatic stress. They provide a means of personal and professional involvement in the activities of the society. All meeting participants are welcome to attend SIG meetings.

Presentation Level
All presentations designate the knowledge/skill level required of the participant as either: Introductory (I), Intermediate (M) or Advanced (A). These are used as a general guide only since attendees have very diverse educational and professional backgrounds.

Introductory (I): Presentations that all participants (including undergraduate students) with any appropriate background will be able to fully comprehend and/or appreciate. Presentations will discuss concepts that are considered basic skills/knowledge for those working in the field.

Intermediate (M): Presentations that participants may more fully comprehend/appreciate if they have at least some work experience in the topic to be discussed.

Advanced (A): Presentations consisting of concepts requiring a high-level of previous educational background, or work experience, in the particular area/topic to be discussed as well as being most geared for specialists and those in advanced stages of their career.

Presentation Type Descriptions*

• **Media Presentation**
  Session involving presentation of a segment of film, video, music, drama, literature, artwork or other form of media relevant to traumatic stress, along with discussion.

• **Oral Paper Presentation as “Flash Talks”**
  An exciting new series of talks, presenters will be required to describe their study goals, methods, and results succinctly, somewhat similar to the format of “TED talks”, keeping to a 5-minute time length and a 10-slide maximum.

• **Panel Presentation**
  Sessions that include three to four participants discussing a common theme, issue or question. Panels may include short statements during which panelists outline diverse or similar approaches to the same question. Panels are typically more interactive than symposia, involving active discussion among the panelists.

• **Poster Presentation**
  Individual presentation in a poster format on a topic related to traumatic stress, typically including the presentation of research data.

• **Pre-Meeting Institute (PMI)**
  Institutes are full- or half-day sessions that provide an opportunity for intensive training on topics integral to the conference program, presented by leaders in the field.

• **Symposium**
  Session that includes a group of four sequential presentations, each related to the overall theme of the symposium.

• **Workshop Presentation**
  Instructional session that helps increase participants’ understanding and skill in a particular area of interest. Such sessions may include active involvement of the audience.

* Presentation types are color-coded throughout the schedule.

Topical Tracks

The Program Chairs have grouped presentations on similar themes together into tracks so it is easier for you to find the programs in your area. However, please note that not everything would fit into the tracks so there are more presentations outside the tracks that may be related or of interest and you should check your schedule.

Look for these throughout the meeting schedule in the left column

**Assessment and Diagnosis Track**
Presentations on assessing trauma
